## Dell Optimize for Infrastructure service

### In-depth analysis and strategic guidance

Your company's ability to respond to changing business demands and to deploy and run mission-critical applications and workloads depends on the performance and availability of your IT systems.

That's where Optimize for Infrastructure makes a measurable difference. A designated Technical Account Manager with in-depth technical skills and experience, combined with an intimate knowledge of your environment, provides ongoing strategic direction and guidance. It's like having a personal coach that will help keep the mission-critical systems you depend on performing efficiently, consistently and reliably.

Just like elite athletes, top performers need expert guidance to gain and keep their competitive edge. With Optimize for Infrastructure, we work with you year round, keeping a daily watch on system trends, risks, capacity and performance metrics, then providing on-going evaluations to maximize the full potential of your infrastructure.

### Continual improvement for dynamic business environments

Aligning your IT needs to business objectives, your Optimize expert orchestrates a host of proprietary tools and resources to proactively monitor, analyze and report on system health, delivering actionable insights and recommendations for improvement.

### Key benefits:

- Maximize storage, compute and networking performance and operational efficiencies
- Reduce risk of data loss, downtime or business delays
- Save time on maintenance, administration and reporting
- Experience faster returns on your infrastructure investment

It's like having  
a personal  
coach for your  
infrastructure.

## Analysis & recommendations

Before making recommendations, your Technical Account Manager conducts a deep-dive evaluation, analysis and review of system performance – all designed to ensure optimal efficiencies.

### Ongoing reviews cover:

- Capacity and performance trends
- Front and back-end overviews
- Replications
- Anomalies and potential risks
- System logs
- Fault tolerance
- Controller and software versions
- Product notifications and code releases
- Security and technical advisories
- CloudIQ health scores, system data and alerts
- Case reviews

## Optimize for Infrastructure includes the following features:

- An in-region Technical Account Manager – a highly skilled system expert who knows and understands your environment, workloads and priorities
- Daily system monitoring to identify anomalies, avoid potential issues and protect against possible risks
- Deep-dive configuration and performance evaluations
- Regularly scheduled reviews of capacity and performance metrics, system health, operational trend data, utilization forecasts and areas to drive improvement
- Annual strategic planning session to align with your business objectives, review issues and set benchmarks for the upcoming year
- Ongoing best practice advice, technical guidance and knowledge transfer
- Assistance with critical support issues
- Available on select datacenter products from Dell.

## Avoiding risks, bottle necks and poor performance

With so much information at your fingertips, you don't always have the time to review and interpret data or to formulate an action plan or course correction. Bandwidth is always a challenge, as are competing priorities, rigid deadlines and ever-increasing demands. This is where Optimize for Infrastructure delivers an added level of technical expertise – to help organizations avoid operational conflicts, reduce unplanned outages, simplify upgrades and evaluate the impact of near-term decisions on future performance.

*The Dell EMC Optimize service helps us sleep at night because we know we have a constant set of eyes monitoring our storage. They are very quick to alert us to potential issues and assist in resolving anything that comes up. The monthly review call is also a huge benefit because it helps us stay in touch with what is going on under-the-hood when things get busy.*
