Global Data Protection Index Cyber Resiliency Multicloud Edition Understanding the impact of cyber threats, multiclouds, GenAI, operational complexity and more

Data protection challenges resulting in disruption are on the rise with public clouds and cyberattacks the leading areas of concern. Organizations that continue to modernize data protection can minimize risk and raise confidence levels as they pursue digital transformation.

Widespread concerns and a lack of confidence over existing data protection measures are leaving organizations in a vulnerable position

60% are not very confident in their

organization's ability to meet its backup and recovery service level objectives

With 79% concerned they will experience a

disruptive event in the next 12 months

2.17<sub>TB</sub> worth of data has been lost, on

average, in the last 12 months, costing \$2.61 million, on average

could become infected or corrupted even with immutability, sound backup and recovery practices

Cyber-attacks pose an ever present and increasing threat

55%

say that their organization has experienced a cyber-attack or cyber-related incident in the last 12 months. Costing organizations \$1.92 million, on average

**75%** 

are concerned that their organization's existing data protection measures are unable to cope with malware and ransomware threats

69%

are not very confident that all business-critical data can be reliably recovered in the event of a destructive cyber-attack

59%

invest more in cyber prevention than cyber

recovery despite these concerns

resiliency of organizations, but there are concerns over data protection

Artificial Intelligence has the potential to increase the cyber

42% report that their organization is investing in AI technology to better defend against attacks

Security is a major concern for organizations when

agree that generative AI will create large volumes of new data that will need to be protected and secured

79%

using public, multicloud environments

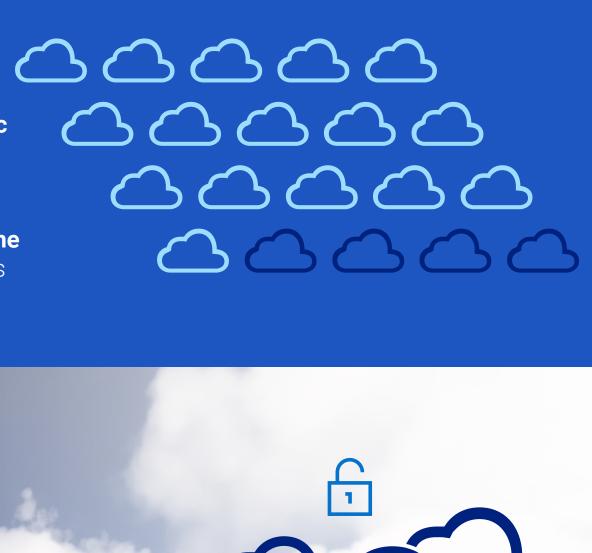

organization can protect all the data across their public clouds

of those using hybrid or public

deploying applications are **not** 

cloud when updating or

very confident that their

The majority of respondents believe the most important capabilites for enabling hybrid and multicloud operations include the ability to: **Protect multi-workload 58%** environments

**Ensure cybersecurity** 

56%

40% face challenges over data

security when maintaining data in

public, multicloud environments

Organizations require external support to protect their workloads and ensure backup capabilities

95% of organizations who enlist cloud service providers to protect their workloads report that they have a separate contract dedicated to this

of organizations have brought in outside support, including cyber recovery services to improve cyber resiliency

**DELL**Technologies

Dell Technologies delivers cyber recovery, backup, disaster recovery, long-term retention, and more to help

Learn more about Dell modern, simple, resilient multicloud data protection:

you protect all your data and applications.

Research carried out by Vanson Bourne between September and October 2023. Respondents were IT and IT security decision makers from both private and public organizations with 250+ employees. There were a total of 1,500 respondents from four regions – 300 from the Americas (US, Mexico and Brazil), 675 from EMEA (UK, France, Germany, Italy, South Africa and UAE), 375 from APJ (Australia, India, Japan, Singapore and South Korea) and 150 from China.
