## Absolute Secure Endpoint

Reliable, resilient endpoints for the anywhere workforce

Most IT teams rely on specialized software to manage and secure the endpoint, which serves as the primary work utensil for today's anywhere workforce. Endpoint, patch and vulnerability management remain foundational components of any IT team's enterprise infrastructure and security strategy.

Only solution embedded in 600 million devices that actively self-heals critical security controls

## Absolute Secure Access

Reliable, resilient access for the anywhere workforce

To enable a secure and productive work-from-anywhere environment, it is vital to extend cyber resilience beyond the endpoint. Connectivity and secure access to applications is critical for the anywhere workforce. A mobile-first, enterprise-grade secure, optimized tunnel with Zero Trust Network Access (ZTNA) are required to establish endpoint device that on-premises, or in a the organization.

Only solution that actively self-heals any network connection and optimizes user experience
