

Equipping everyone with the skills they need to succeed

Devices are everywhere in schools nowadays. Yet not all teachers and students feel as comfortable as they should do in using the technology to transition from traditional methods of teaching. Dell Technologies provides the solutions and expert support to smooth out the transitional bumps — empowering everyone.

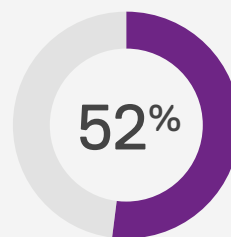

Mind the skills gap

No one doubts how devices can improve educational outcomes. For some time, schools in the UK have recognised the power of these tools to deepen engagement and equip students with the skills to achieve their ambitions. But at Dell Technologies, we still see the impact of devices falling short due to skills gaps that leave teachers and students frustrated with their IT experience.

Consultation and training

We find from working with schools that it's essential to develop a training program so everyone is comfortable with their devices when they land. It's important to work with teachers and staff to create a list of use cases to define the devices that are right for them. Don't stop there, though. Building continuous training into your IT roadmap will ensure everyone can embrace IT changes, however large or small.

The importance of digital skills

Empowering teachers, to empower students

To ensure the successful delivery of personalised learning experiences, it's vital our educators have a sound understanding of how technology can help deliver better learning outcomes. Teachers need to be supported to develop the skills they require to harness the benefits of new technologies. This will not only make their jobs easier but allow them to focus on delivering best-in-class teaching. It's this that will enable students to achieve their true potential.

How Dell Technologies helps

Dell Technologies follows the design principle that IT should be an enabler for the continuity of inspirational teaching, rather than a distraction. Setting up our tools is simple, and they come with fast, empathetic support — ensuring teachers and students can enhance their productivity and efficiency. What's more, with solutions such as PC as a service, our programme managers walk the floor to ensure everyone is 100% satisfied with their IT choices before the work is done.

Enabling collaborative working

South Devon College never looked back when it built its Hi Tech & Digital Centre to satisfy the requirements of students. Working with Dell Technologies, the college ensured it had the right technology in place to inspire teachers, staff and students. Here are some of the benefits they experienced:

- Enables digital learning and collaboration across multiple disciplines.
 - Supports remote and flexible working for all its staff and students.
 - Cost-effective solution is simple to roll out, manage and update centrally.
 - Flexible solution can expand in line with the college's growth plans.
 - Teaching staff can share and display content from anywhere in a classroom.
