Dell SafeGuard and Response

VMware Carbon Black Cloud Endpoint Standard + Secureworks Taegis™ XDR

Next-Generation Antivirus with Behavioral Endpoint Detection & Response, featuring Secureworks® Taegis™ XDR to provide an endpoint protection platform that detects, investigates and responds to advanced threats across your endpoints, network, and cloud environments.

VMware Carbon Black Cloud Endpoint Standard is an industry-leading next-generation antivirus (NGAV) and behavioral endpoint detection and response (EDR) solution. Delivered through the VMware Carbon Black Cloud. Certified to replace standard AV and designed to deliver the best endpoint security with the least amount of administrative effort. It protects against the full spectrum of modern cyberattacks, including the ability to detect, prevent, and respond to both known malware and unknown non-malware attacks.

Taegis™ XDR is a cloud-native, SaaS application that is easy to set up and maintain. From day one, you will benefit from Secureworks’ Threat Intelligence, as well as state-of-the-art data science methodologies that automatically analyze security telemetry to alert you to unknown and known threats across your endpoints, network, and cloud environments.

Learn and Prevent
The advanced machine learning models analyze complete endpoint data to uncover malicious behavior to stop all types of attacks, online and offline. Integrated Threat Intelligence gives advanced threats nowhere to hide with knowledge from the Secureworks Counter Threat Unit™ research team

Capture and Analyze
Continuously captures activity from every endpoint, to analyze each event stream in context to uncover emerging attacks other solutions miss. Benefit from insights taken from over 4,200 diverse customer environments with the Secureworks Network Effect

Respond Quickly
Industry-leading detection and response capabilities that reveal threat activity in real-time, so you can respond to any type of attack as soon as it’s identified. Visualizes every stage of the attack with easy-to-follow attack chain details to uncover root cause in minutes. See attacker activity with security alerts mapped to the MITRE ATT&CK™ framework. Get to a conclusion quicker with collaborative investigation workflows designed by the Secureworks seasoned security pros.

USB Device Control
Gain visibility with detection and monitoring of external USB storage devices connected to any Windows endpoint with VMware Carbon Black Endpoint Standard with sensor v3.6.0.1897 or greater. Reduce common threats associated with USB storage devices by blocking read, write, and execute operations. Inform and educate internal users and administrators with automated alerts whenever a block occurs. Allow approved USB devices by the manufacturer or serial number.

Benefits

- Improved protection for known and unknown attacks
- Full visibility into endpoints to close security gaps and identify indicators of attack (IOA), and indicators of compromise (IOC)
- Easier investigations into security incidents
- Simplified operations with a cloud-based platform, no infrastructure required
- Consolidate multiple endpoint agents
- Flexible prevention policies or leverage the default policies based on best practices
- PCI and HIPAA Compliant
- See fast time to value with built-in use cases that leverage proprietary threat intelligence and machine learning algorithms
- Detect unknown and emerging threats that go unnoticed by most SIEMs. Quickly understand what happened quickly correlating events across your security controls
- Justify the criticality of an alert with automated enrichment from Secureworks Threat Intelligence, entity context, and other 3rd party data
- Use ask an expert chat to get advice from Secureworks security experts if you get stuck during an investigation
