

DELL VXRAIL + VMWARE

Delivering a future where anything is possible

No matter where you run your business, we cultivate opportunity with our deep, expansive technology landscape that accelerates data center modernization.

VxRail Transform your IT environment into a single consistent ecosystem.

Cloud

Take a simple, direct path to modern apps and cloud.

- Interface with any VMware Cloud using full stack integration
- Rapidly develop and deploy modern applications on consistent infrastructure
- Seamlessly interface with hyper-scalers

VMware Cloud Foundation on VxRail
Accelerate developer productivity with a fully integrated and automated infrastructure.

APEX private and hybrid cloud
Build, deploy and manage modern applications with a consistent experience across physical, virtual, and containerized infrastructure.

Validated Platforms for multicloud
Flexibility to run multiple container orchestration platforms across core, edge and cloud.

Core

Simplify, extend and enhance your VMware environment.

- Purpose built to enhance VMware
- End-to-end integration
- Mature, automated LCM across full stack and common operations deployed anywhere.

VxRail on next-gen PowerEdge
Powered by 4th Generation Intel® Xeon® scalable processors for traditional and emerging workloads.

VxRail with vSAN Express Storage Architecture
An optimized vSAN architecture designed to process more data with efficiency, scalability and performance.

VxRail dynamic nodes
Compute only vSphere clusters that allow you to scale compute and storage independently based on workload needs.

Dynamic AppsON
Have simplicity with a common operational model that pairs compute-only VxRail dynamic nodes with PowerStore to automate lifecycle management, provide independent scale and increase the flexibility.

Edge

Simplify operations and run applications with the same data center management infrastructure.

- Centralized automation, operations, health monitoring and LCM
- Consolidate and standardize on a common platform
- Reduce silos and eliminate costly hardware

VxRail VD-4000
Small and rugged, it's purpose-built to extend operational efficiencies into extreme edge locations.

VxRail satellite node
Low-cost single node option with the same operation efficiencies and standardization across edge locations.

Scalable 2 or 3 node clusters
Configure for any edge application.

Edge validated designs
From manufacturing to retail, VxRail goes where you do business.

Modernize your infrastructure

Streamline operations

Host traditional and modern applications

Dell VxRail

Do more with a single HCI platform.
