

Solution-level Deployment for Day One Readiness

Dell ProDeploy and ProDeploy Plus for PowerProtect Cyber Recovery and Backup Solutions

Accelerate your path to cyber resilience

When adopting new technology, time, precision and efficiency are everything. With ProDeploy and ProDeploy Plus for PowerProtect Cyber Recovery and Backup Solutions, your business can experience seamless deployment powered by Dell expertise. These services are designed to help organizations maximize the value of their data protection technologies while accelerating a path to cyber resilience.

Solution-level deployment to enable data recovery in the event of a cyberattack or outage

Our solution-level ProDeploy options simplify complex implementations, combining hardware and software deployment into a single efficient offer. These tailored deployments empower you to fast-track operational readiness while gaining peace of mind.

It's not just about protecting your data; it's about empowering your business to thrive in an era of uncertainty.

Built with cyber resilience at its core

Cybersecurity challenges are growing, but so are the solutions. With hands-on expertise and Dell AIOps-embedded cybersecurity policies and best practices, we can accelerate implementation while strengthening protection. From deployment planning, design and configuration to operational readiness, every aspect is optimized for efficiency and performance.

Your success engine in motion

Solution-level deployments for PowerProtect Cyber Recovery and Backup environments are designed with your business's success in mind. These services support a fast, seamless deployment, helping your team safeguard critical data with confidence while strengthen your operational foundation.

Drive efficiencies for faster time to value

Deploy smarter and quicker with a streamlined process that integrates both hardware and software under one efficient service. The results: your technology is ready to protect and serve your business in record time, requiring fewer resources and IT effort.

Deploy accurately and securely every time

Deployment is executed by highly skilled experts specializing in cyber resilience. Their detailed workflow drives accuracy across every task, reducing risk throughout the process—so you can confidently rely on a robust, accurate deployment.

Experience day-one operational readiness

Our solution-level deployment goes the extra mile with security focused production-ready capabilities. This added feature includes policy configuration and verification checks to get your systems primed for day-to-day cyber resilience.

Get Started Today

Discover how solution-level deployment for PowerProtect Cyber Recovery and Backup can accelerate your path to cyber resilience. Talk to a Dell representative to explore how we can support your business goals with modern future-ready services.

Solution-level ProDeploy

- Onsite or guided hardware installation
- Remote software configuration
- Production Ready Enablement

Solution-level ProDeploy Plus

- Onsite hardware installation
- Onsite software configuration
- Implement cybersecurity best practices and policies in Dell AIOps
- Production Ready Enablement

Solution-level deployment for PowerProtect includes configuration of the following Dell hardware and software components.²

Cyber Recovery Vault Solution

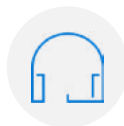

- Dell PowerProtect Data Domain
- Dell PowerProtect Cyber Recovery
- Dell PowerProtect Data Manager
- Dell CyberSense

Production Backup Solution

- Dell PowerProtect Data Domain
- Dell PowerProtect Data Manager
