

Threats come from many directions

People
Bad actors
Human error

Technology
Hardware failures
Software errors

Geography
Natural disasters
National security

Cyber risks are evolving.
You need rock solid data protection.

Dell PowerProtect Data Domain Platform

The industry leading choice for protecting data on-premises and across multicloud.

Security

Ensure your data isn't tampered with or corrupted.

Protect against threats with data immutability, end-to-end encryption, Hardware Root of Trust, Secure Boot, and more.

Durability

Recover what you backup, every time.

Industry-exclusive Data Invulnerability Architecture (DIA) provides 100% data validation—from end to end.

Data Services

Get the most out of IT assets and resources, while reducing costs.

65:1 data reduction¹, faster backups and restores with Intel® Xeon® processors, and less than 1 US cent per GB/month to protect.²

Efficiency

Have more deployment options and less geographic risk.

Secure all your data from core to edge to multicloud, using native integration with Dell PowerStore and PowerMax, plus an extensive backup software ecosystem.

Flexibility

Recover faster from the unexpected.
Guaranteed.³

Don't just survive, thrive in the face of uncertainty.
