

# Dell Data Protection Suite

 Proven and modern  
data protection for  
all your workloads

## Dell Data Protection Suite

### Why a Software Suite?

A software suite brings together a variety of applications, tools and innovations under one umbrella, providing flexibility, efficiency and reliability that single-point solutions just can't match.

### Why Data Protection Suite?

Built on a foundation of Dell PowerProtect Data Manager, NetWorker and Avamar, Data Protection Suite brings years of experience and innovation to bear on your data protection infrastructure. Whether in your data center, in a virtual environment or in the cloud, Data Protection Suite has all the tools to protect your data, optimize your backup and recovery operations and modernize your IT infrastructure.

## Proven, reliable data protection

For over a decade, thousands of customers have relied on our software to protect their critical data from loss, disaster, corruption or cyber attacks.

Data Protection Suite enables efficient and innovative data protection for a diverse range of environments, providing the best possible solution to protect your data with confidence and recover with ease.

### High Performance

Meet all your backup and recovery SLAs with fast backups and restores and easy, automated management tools.

### Scalability

From remote/home offices to large enterprises, you can scale with ease and leverage the tools to ensure you are prepared for future growth.

### Broad compatibility

From storage targets to databases to hypervisors to enterprise applications to cloud platforms, Data Protection Suite enjoys a wide spectrum of supported technologies and third party vendors.

## Deploy data protection for VMware without compromise

Leveraging a strong relationship with VMware, Data Protection Suite's applications and tools all have tight integration with VMware and its products, ensuring flexible and consistent data protection across virtual environments.

### Ensure Availability

Simplify VM image backups and experience near-zero impact to VM resources with Transparent Snapshots.

### Data Protection for VMware Tanzu Workloads

Protect both VMs and containers with a single enterprise-grade solution.

### Continuous data protection

Quickly recovery to any-point-in-time for operational and disaster recovery scenarios.

## Protecting your business starts with protecting your data

Threats to critical data continue to be on the rise and your organization cannot afford to compromise on protection. Data Protection Suite provides the tools for you to build a cohesive and intelligent data resiliency program across all your data environments so you can face potential cyberattacks with confidence.

### **Secure Data Isolation**

Easily establish protocols and automated workflows to establish an isolated vault via an operational air gap.

### **Intelligent Analytics**

Stay ahead of the rapidly changing threat landscape and sophisticated cyber criminals with adaptive analytics and machine learning.

### **Data Recovery with Confidence**

Increase your cyber resiliency with automated recovery workflows, tools and dedicated incident response services.

## Deliver secure and efficient multicloud data protection

Data Protection Suite helps you fortify the protection and resiliency of your workloads and data across your multicloud experience. Boost efficiency and scalability throughout your cloud infrastructure, while reducing total cost of ownership.

### Public Cloud Protection

Whether you are working in AWS, Microsoft Azure, Google Cloud or a combination of providers, Data Protection Suite reduces complexity and tool proliferation, helps build reliable backup processes, and improves resource efficiency.

### Long-Term Retention in the Cloud

Tier aging data automatically to the public cloud to meet compliance, lower IT costs and reduce on-premises footprint.

### Cloud Disaster Recovery

Leverage the cloud to build, test and implement a comprehensive disaster recovery plan. Rapidly recover data and applications directly in the cloud with Data Protection Suite.

### Containers and Cloud Native Protection

Reduce the complexity of protecting your containerized workloads and ensure the availability of all your data at scale without business disruption.

## Flexible, efficient and reliable data protection

All the tools to protect your data, optimize your backup and recovery operations, and modernize your IT infrastructure.

### PowerProtect Data Manager

Next generation software platform to protect existing and modern workloads.

### NetWorker

Protect your critical workloads with a consistent experience across heterogeneous applications and environments.

### Avamar

Perform fast and efficient backup and recovery operations across physical, virtual and cloud environments.

### RecoverPoint for Virtual Machines

Deliver continuous data protection for operational and disaster recovery of VMware virtual machines for quick recovery to any point in time.

### Data Protection Advisor

Gain actionable insights through visibility, predictability and reporting across your diverse data protection environment.
