PowerProtect Cyber Recovery for Sheltered Harbor

Protecting Critical Customer Data and Preserving Consumer Confidence in U.S Financial Markets

WHAT IS SHELTERED HARBOR?

Created in 2015 by the financial industry the Sheltered Harbor standard incorporates a set of cyber resilience and data protection best practices and safeguards for protecting U.S financial data. Cyber threats, including ransomware, data destruction, or theft targeting production and backup systems, put consumer and corporate financial data at risk.

A successful cyber attack on a U.S. bank, credit union or brokerage firm would damage that financial institution’s reputation, undermine consumer confidence in the U.S. financial system, and possibly trigger a global financial crisis.

Sheltered Harbor enhances U.S. financial stability and institutions’ cyber resilience by isolating critical customer account records and other data immutably within a digital vault. In the event an institution’s primary or backup systems are compromised by a cyber attack like ransomware or other event, rapid recovery of this critical data is enabled, facilitating the continuity of critical customer-facing banking services, ensuring public confidence is maintained.

WHY CYBER RECOVERY?

Dell Technologies is the first Solution Provider in the Sheltered Harbor Alliance Partner Program, that has developed a Sheltered Harbor turnkey data vaulting solution for U.S. financial institutions.

PowerProtect Cyber Recovery for Sheltered Harbor is the first on-premises turnkey data vaulting solution to be endorsed by Sheltered Harbor. It meets all technical product requirements for Participants implementing the Sheltered Harbor standard.

Data Vault – Nightly backups of critical data in the Sheltered Harbor standard format are created by the participating institution or service provider. The data vault is encrypted, unchangeable and isolated from the institution’s infrastructure, including backup, disaster recovery and other data protection systems.

Isolation & Governance – An isolated, secure environment disconnected from corporate networks restricts users other than those with proper clearance. Automated data copy and air gap management assures preservation of data integrity, availability, security and confidentiality.

Recovery & Remediation – If a Sheltered Harbor Resilience Plan is activated, the participating institution can quickly recover data from the vault to enable the fastest restoration and resumption of banking operations.

The Challenge: Cyber attack on the Financial Services Industry Could Trigger Global Financial Crisis

All organizations are concerned about the crippling impact a malicious cyber attack could have on their business, even while 97% of organizations will use sensitive data in their digital transformation efforts.¹ There is a great reward in unlocking the value of data.

There is also significant risk if sensitive data falls into the wrong hands, is destroyed or is released into the public. Malware and ransomware are evolving and attacks are on the rise – Enterprise ransomware attacks rose 12% in 2019 to account for 81% of all ransomware infections according to Symantec’s 2019 Internet Security Threat Report.² Furthermore, 52% of all data breaches are of malicious intent in 2020, up 30% from just five years ago, according to a recent Ponemon Institute report.³

What’s more, the threat actors’ tactics and tools have evolved to make detection nearly impossible and attack prevention increasingly so. Cybercrime tactics continue to evolve, with 30% of reported cyber attacks involving insiders, up from 25% just three years ago, according to Verizon Data Breach Investigations Report 2020.⁴

The U.S. financial industry has suffered the highest losses due to cybercrime over the past three years according to Accenture’s 2019 Annual Cost of Cybercrime report,⁵ and these forces combine into a perfect storm of threats for global financial markets to address.

Sheltered Harbor was formed in 2015 as a nonprofit, industry-led initiative to guide U.S. financial institutions to decrease the risk of a cyber attack compromising customer data and interrupting normal banking services. The Sheltered Harbor ecosystem comprises participating institutions (U.S. banks, credit unions, brokerages, asset managers), national trade associations, solution providers and service providers dedicated to enhancing the stability and cyber resilience of the financial sector.

Traditional disaster recovery and business continuity are necessary to help restore full operational capabilities after a natural or man-made event. In the wake of a targeted, sophisticated cyber attack, Sheltered Harbor aims to ensure that data necessary to restore basic banking operations is readily available with integrity while full recovery procedures continue.
Dell EMC PowerProtect Cyber Recovery for Sheltered Harbor – Robust cyber resilience for financial institutions’ most critical data

Dell Technologies is the first solution provider to join the Sheltered Harbor Alliance Partner Program. Our endorsed solution for Sheltered Harbor is based upon Dell PowerProtect Cyber Recovery, a market leader with an almost five-year history of protecting organizations’ most critical data from cyber attacks, such as ransomware.

To comply with the Sheltered Harbor Specification, the Cyber Recovery vault architecture has been extended to perform the Archive Generation and Secure Repository processes. Extracted Sheltered Harbor data is saved in production, then securely replicated via a logical, air-gapped, dedicated connection to the vaulted environment where the remaining steps, such as retention locking, are performed.

PowerProtect Cyber Recovery for Sheltered Harbor

By creating a dedicated, isolated environment, physically separated from corporate networks and backup systems, critical data sets, which Sheltered Harbor Participants are required to protect, are available in standardized format so that basic banking services can be quickly resumed for customers. Deployment is measured in weeks instead of months, and with a certainty of compliance with the Sheltered Harbor Specification.

Summary

Dell EMC PowerProtect Cyber Recovery for Sheltered Harbor provides participating institutions a fully endorsed, fast, cost-effective and efficient alternative to each institution building a one-off, proprietary vault in order to achieve compliance with the Sheltered Harbor Specification. Banks, credit unions and brokerage firms choosing to implement the Sheltered Harbor standard can turn to Dell Technologies for a fully endorsed, fully supported turnkey data vaulting solution.

With the added benefit of leveraging a mature vault-based technology, Sheltered Harbor Participants choosing PowerProtect Cyber Recovery for Sheltered Harbor can confidently meet their immediate deployment needs, as well as establishing a foothold for their future data vaulting requirements. A participating institution has a path to survival and public confidence in the U.S. financial system is maintained.
