<sup>1</sup>Logical capacity based on up to 50x deduplication (DD3300) and typically 65x deduplication (DD6900, DD9400, DD9900) based on additional hardware-assisted data compression typically 30% more per TB when compared to the previous generation. Actual capacity & throughput depends on application workload, deduplication, and other settings.

<sup>2</sup>High Availability configuration only, in a standard configuration SSDs are in the controller. The following systems support a high availability active/standby configuration: DD9900, DD9400 and DD6900

<sup>3</sup>Supported but not for factory racked orders.
