

CloudIQ

Protect your IT environment from growing threats with automated AI-powered cybersecurity assessments and recommendations.

#4

System misconfiguration is among C-level IT executives' top vulnerability concerns¹

2/3

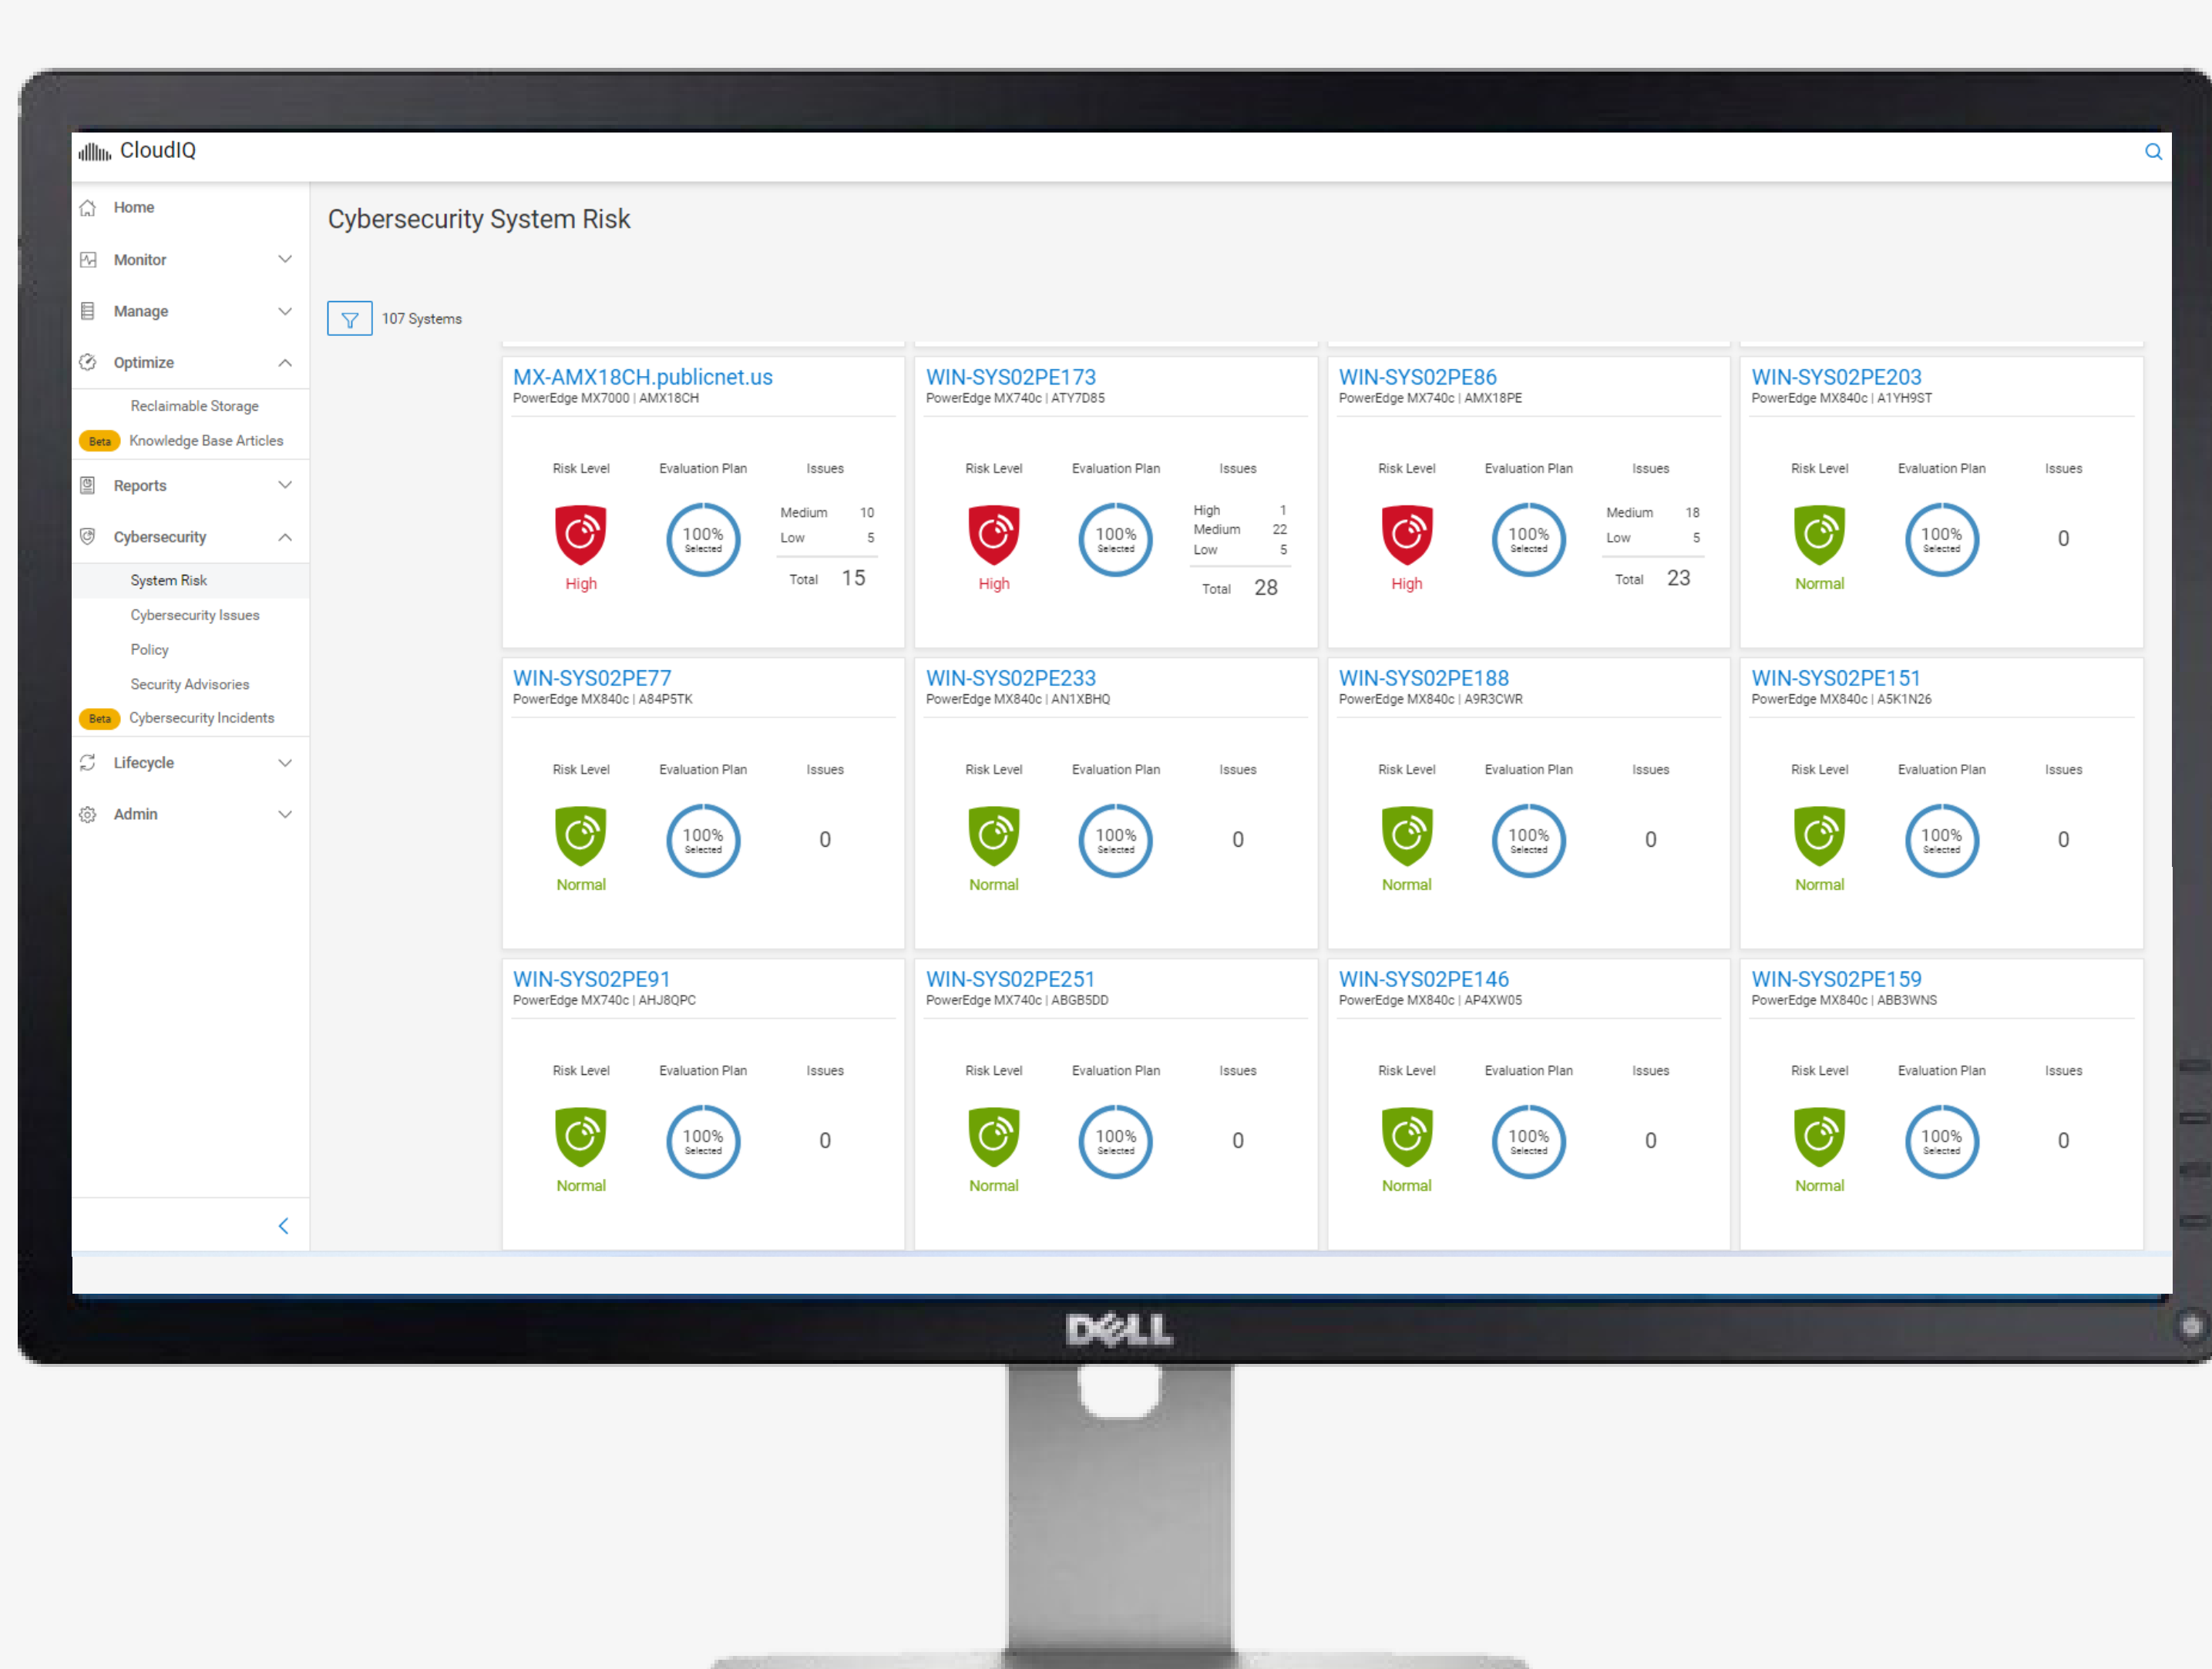

of IT decision-makers consider ransomware a top 3 threat to their organization²

29,065

Common IT security vulnerabilities and exposures were discovered in 2023³

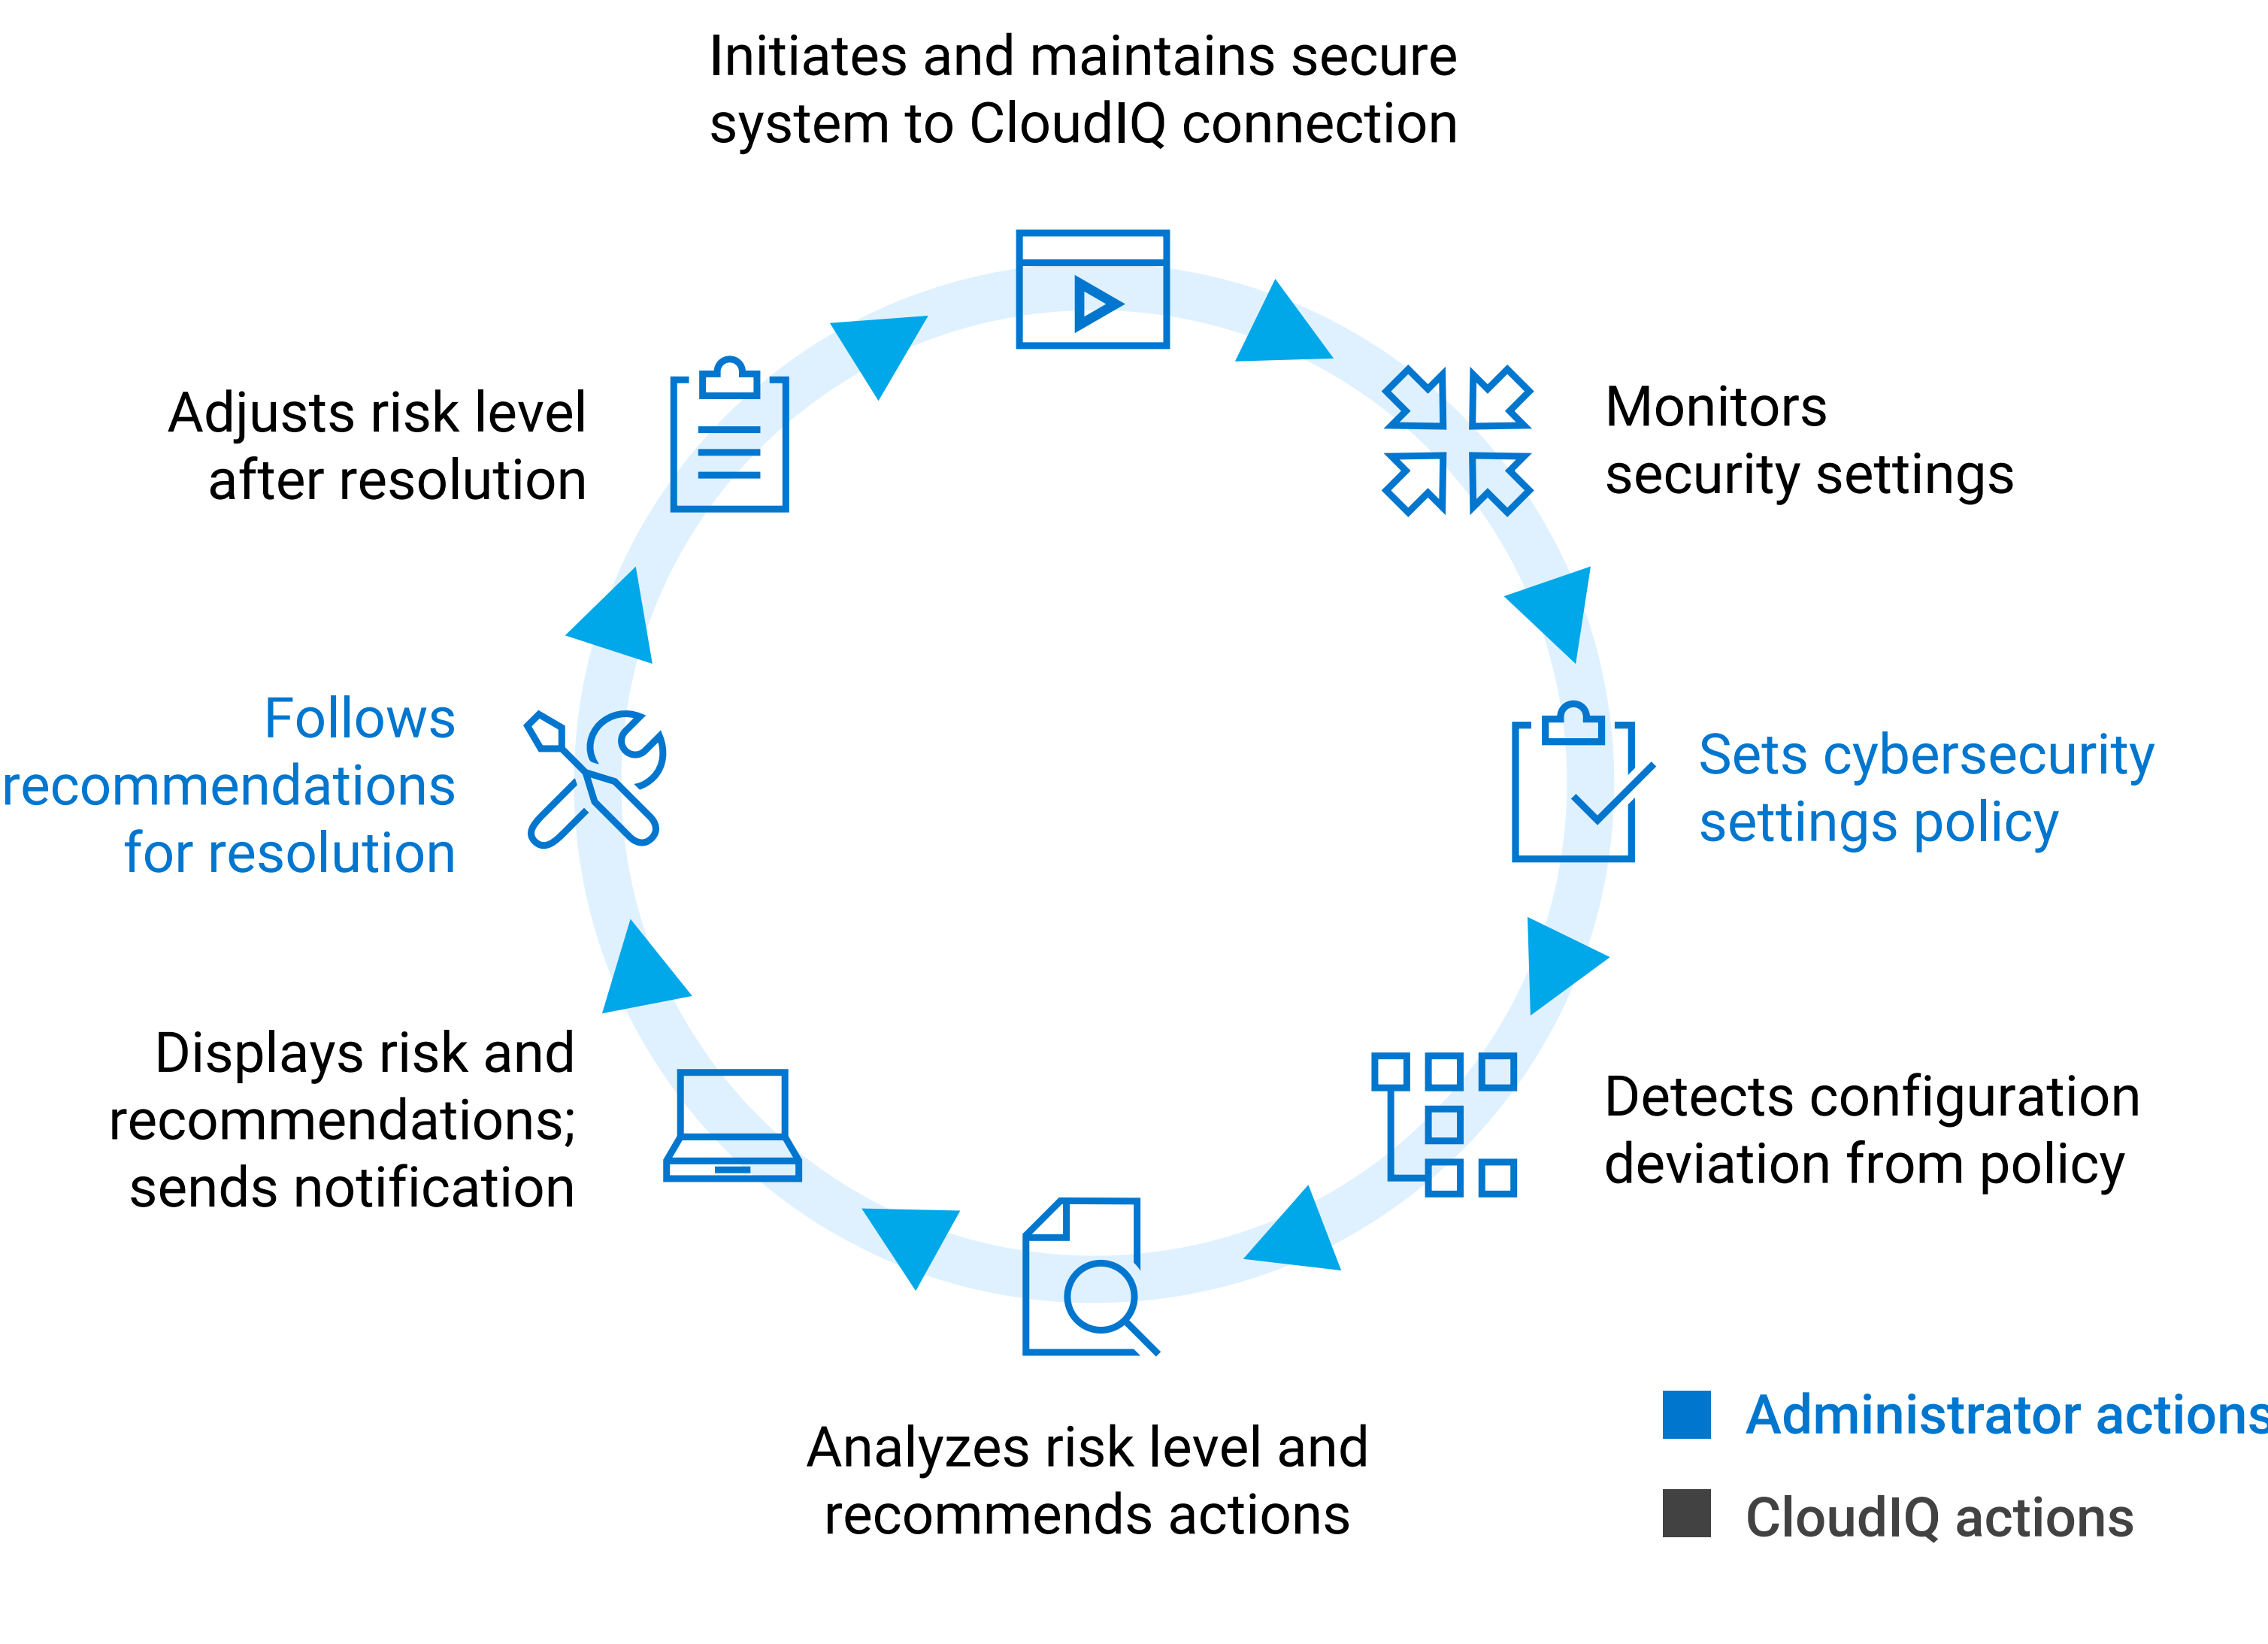

IT teams don't have the time to manually check every system every minute for security misconfigurations, newly discovered vulnerabilities and ransomware.

Let CloudIQ, the AIOps application for Dell on-premises infrastructure and Dell APEX multicloud services, do it for you.

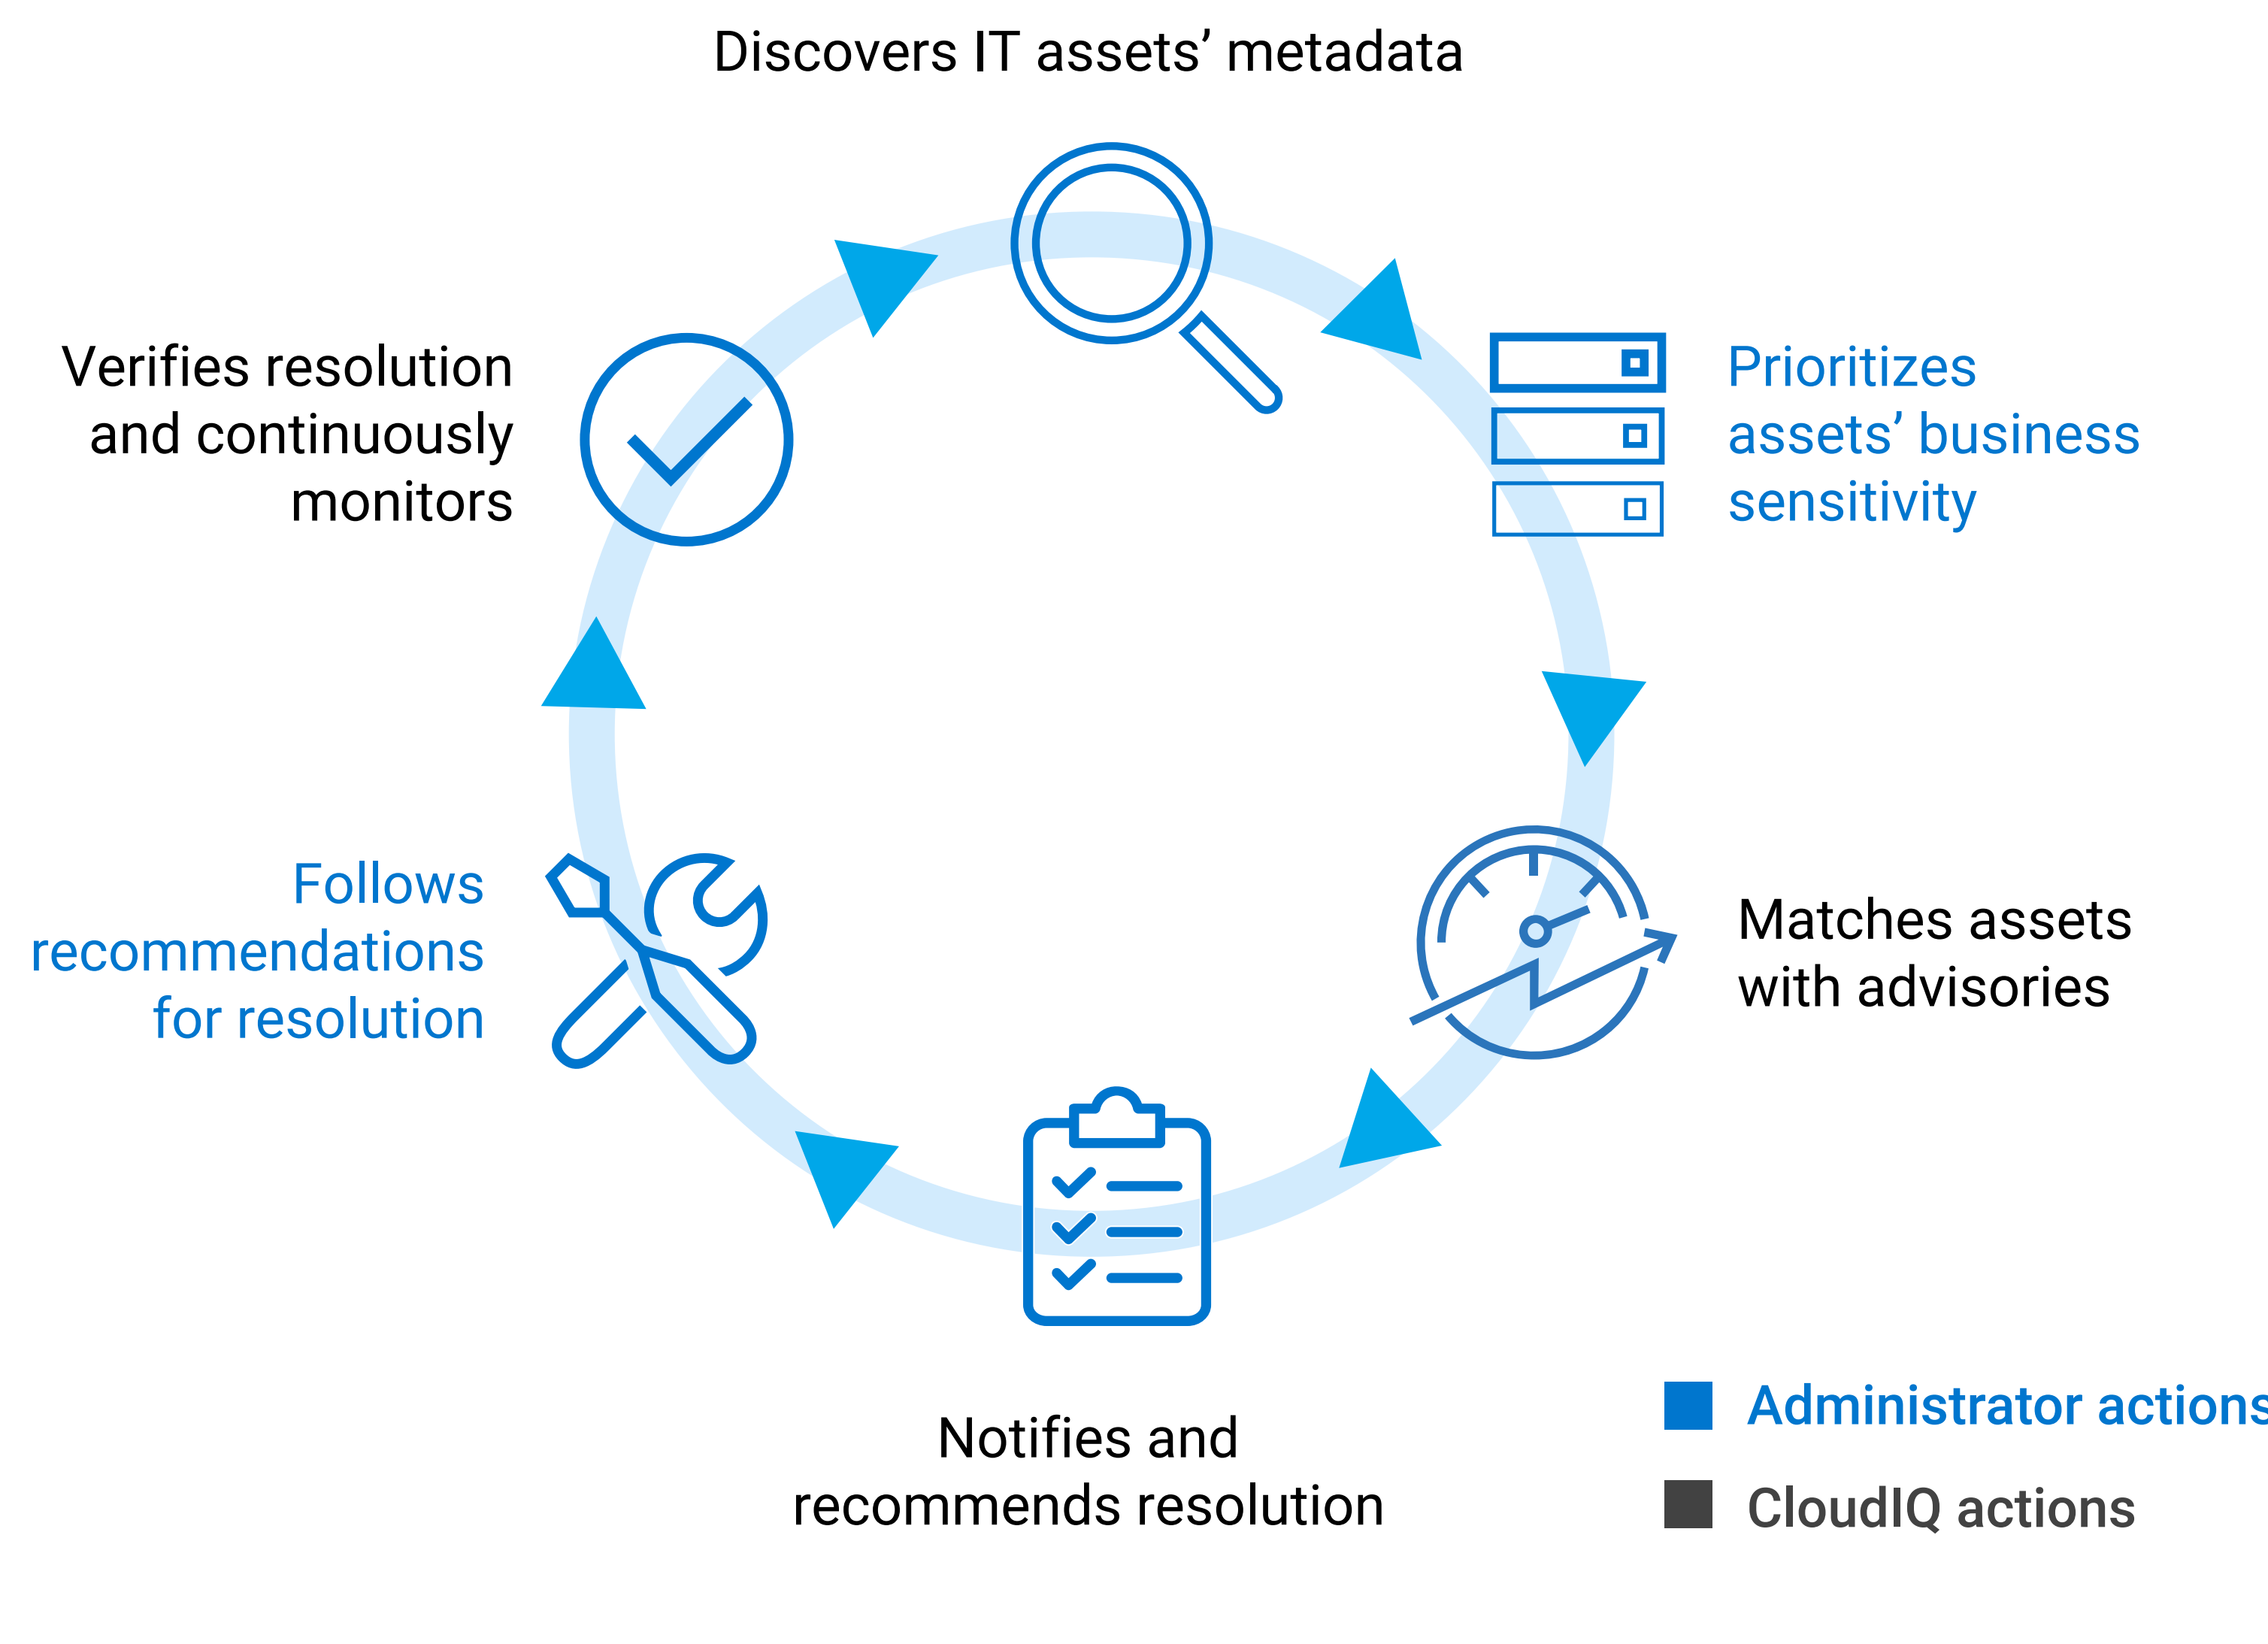

Reduce risk with automated cybersecurity assessments

Know when infrastructure security settings are misconfigured and quickly restore protection.

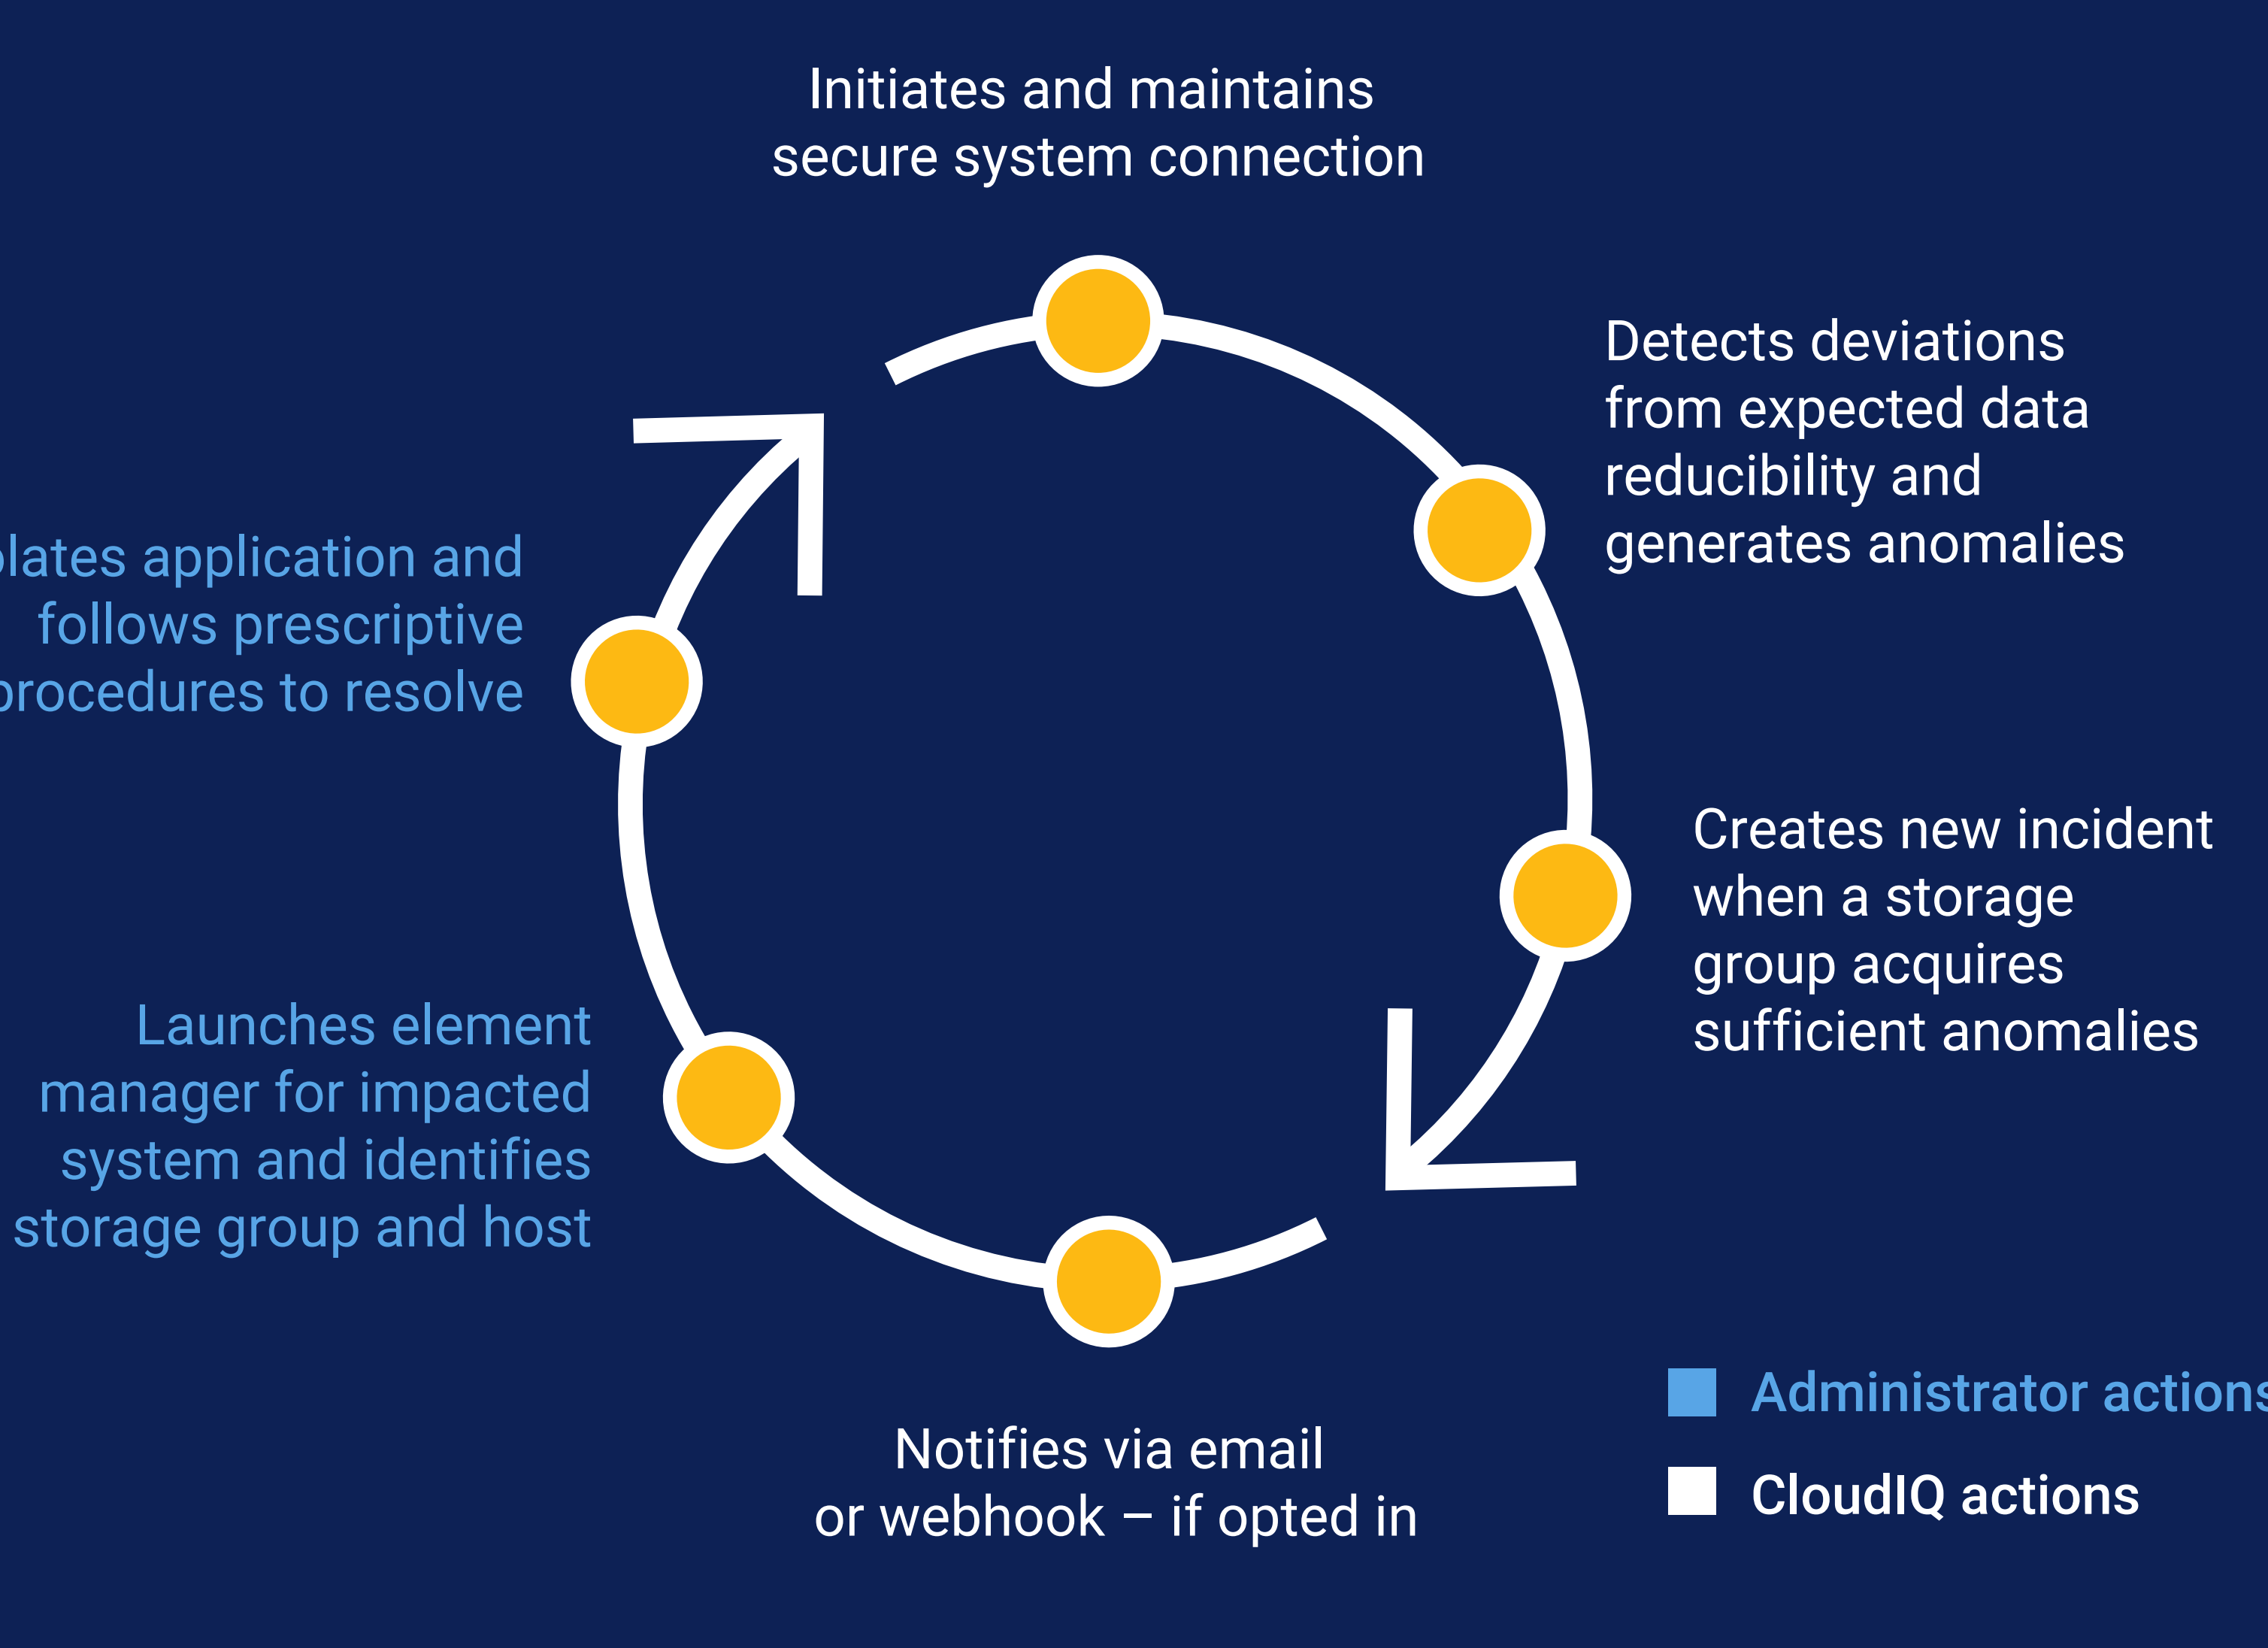

Address vulnerabilities faster with intelligent security advisories

Know about new vulnerabilities as soon as they are discovered and quickly restore protection.

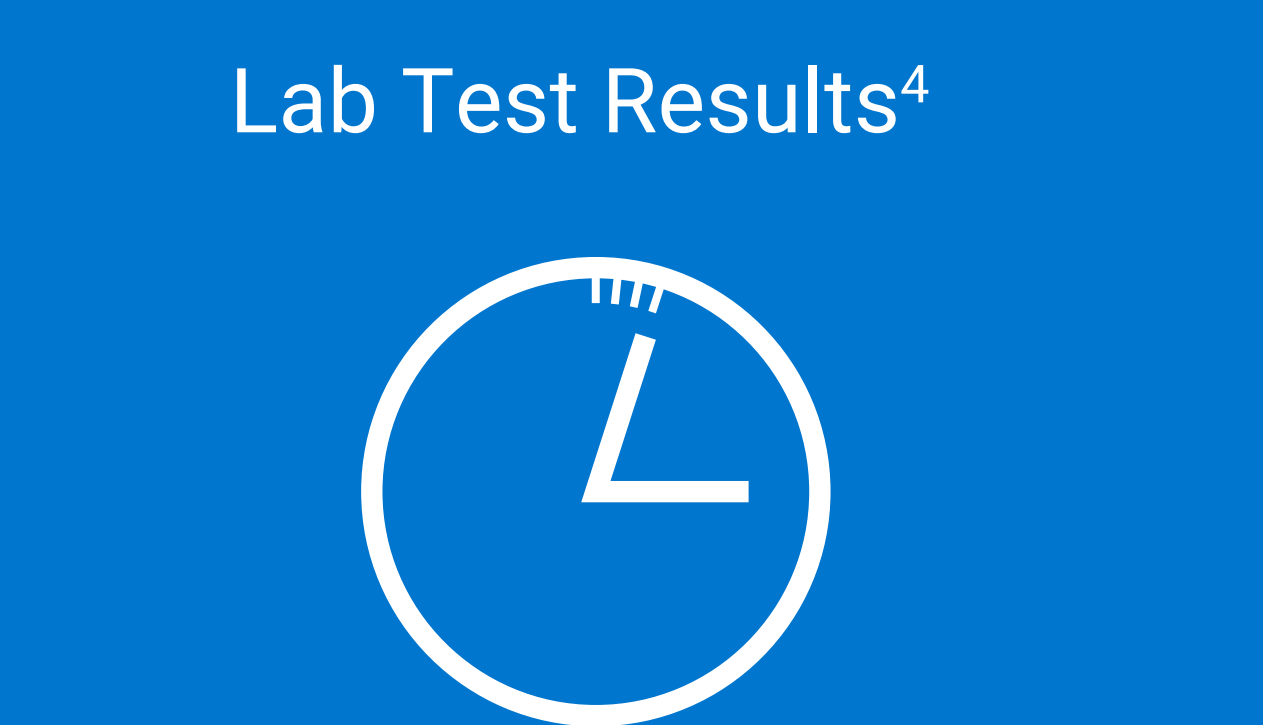

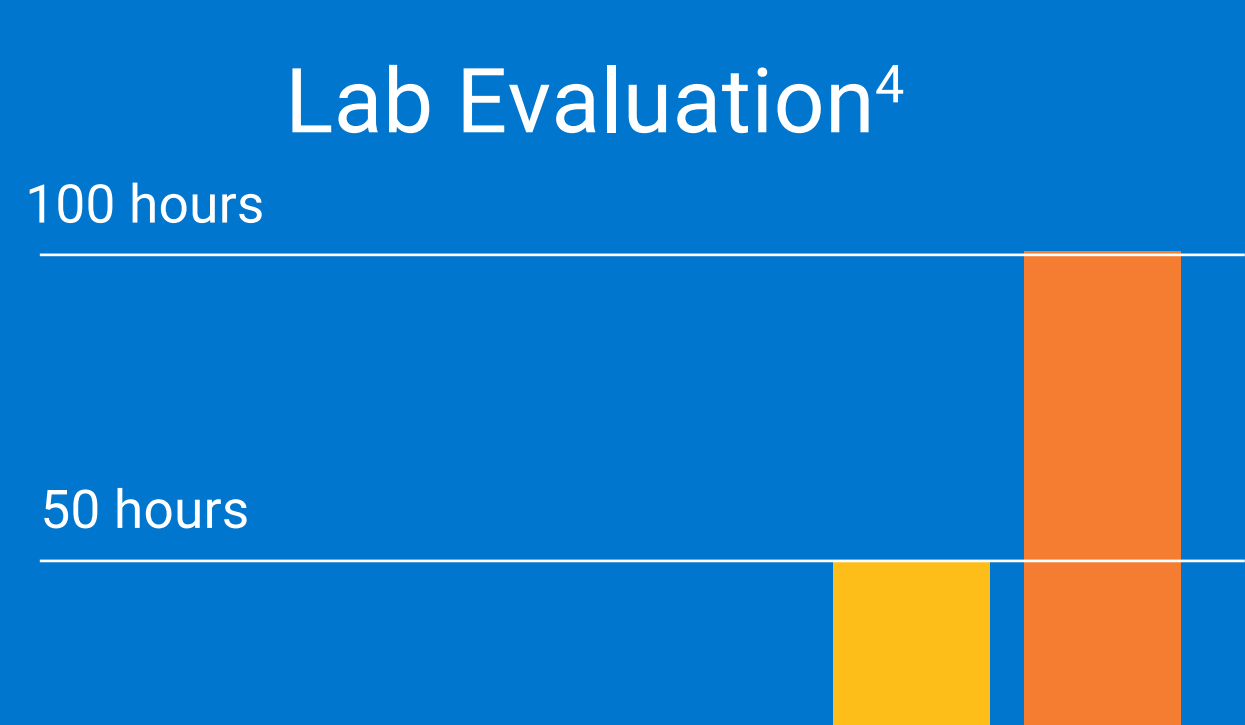

Stop ransomware attacks as soon as they begin

Know about malicious activity and act quickly to protect your data.

Improve Productivity

Improve overall IT productivity by maintaining the health, performance, capacity and cybersecurity of infrastructure.

With CloudIQ, spend only 3 minutes to set policy and automate security configuration checking for up to 1,000 systems vs. 6 minutes to manually check every system

to set policy and automate security configuration checking for up to 1,000 systems

CloudIQ Validated Value

Resolves issues up to **10x** faster⁵

Frees IT **1 day/week**⁵

CloudIQ comes with Dell ProSupport and ProSupport Plus Services at no additional cost.
