**Ports**

| **Total ports** | 16 internal ports (16, or 32Gbps) 8 external SFP+ ports (8, 16, or 32Gbps) 2 external QSFP ports - 4 ports each (16, or 32Gbps) |
| **Port model options** | 8 ports included w/2 SFP+ transceivers 16 ports included w/4 SFP+ transceivers 16 ports included w/8 SFP+ transceivers, Enterprise Software License (port count can be increased with on-demand license) |
| **Port types** | D_Port (Diagnostic Port), E_Port, F_Port, M_Port (Mirror Port); optional port type control in Brocade Access Gateway mode: NPIV-enabled N_Port |

**Features**

### Security
DH-CHAP (between switches and end devices), FCAP switch authentication; HTTPS, IPsec, IP filtering, LDAP with IPv6, OpenLDAP, Port Binding, RADIUS, TACACS+, User-defined Role-Based Access Control (RBAC), Secure Copy (SCP), Secure RPC, Secure Syslog, SFTP, SSH v2, SSL, Switch Binding, Trusted Switch

### Management
HTTP, SNMP v1/v2/v3 (FE MB, FC Management MB), SSH; Auditing, Syslog; Brocade Advanced Web Tools; Command Line Interface (CLI); SMI-S compliant; Administrative Domains; trial licenses for add-on capabilities; Integrated management through Dell EMC OpenManage Enterprise-Modular

### Enterprise Bundle (Optional)
ISL Trunking, Fabric Vision, and Extended Fabric

### Classes of service
Class 2, Class 3, and Class F (inter-switch frames)

### Brocade optical transceivers
16 and 32Gbps: SWL, LWL SFP+ 16 and 32Gbps: SWL, QSFP+ (supports 4x1 Breakout)

  - **NVMe-oF: RDMA (RoCE v2)**: Yes

All NICs support the following:
- iDRAC Connection View
- Wake On LAN
- SR-IOV
- UEFI iSCSI iBFT Boot
- UEFI PXE Boot
- Legacy PXE Boot
- NVGRE
- VxLAN
- IP, TCP, UDP checksum offloads
- Large Send Offload (LRO)
- Receive-Side Scaling (RSS)
- Giant Send Offload (GSO)

MX7000 Overview
PowerEdge MX7000 chassis

Modular foundation to scale across multiple racks to suit a range of demanding use cases

Hosts flexible blocks of server and storage resources while providing outstanding efficiencies through shared power, cooling, networking, I/O and management within the chassis itself

Key Capabilities

- 7U modular enclosure has 8 front-accessible, single-width bays that accommodates variety of compute and storage sleds
- Support for 3 I/O fabrics, each with redundant modules
- QuickSync2 (wireless), Touchscreen LCD and traditional crash cart at-the-box management options

HIGHLIGHTS

- Support for at least three server processor microarchitecture generations and ready for 400Gb Ethernet and beyond
- Non-disruptive upgrades; unique no mid-plane design makes for easier future technology upgrades
PowerEdge MX7000 chassis (front view)

7U chassis designed to support at least three future generations of server technologies

Compute Sleds
• No compromise design with up to eight 2-socket or four 4-socket options
• Up to eight drives plus M.2 boot option for greater storage options than ever before in large chassis

Power and Cooling
• High efficiency 3 KW power supplies
• Grid and N+N redundancy
• Evenly distribute chassis-wide cooling

Storage Sleds
• Flexible, granular drive-level assignment; drives can be mapped to a server or shared
• Up to 16 SAS HDDs/SSDs
• 12 Gb/s direct attached SAS
PowerEdge MX7000 chassis (rear view)

**Scalable Networking**
- Two redundant general-purpose fabrics
- MX Scalable Fabric Architecture for multi-chassis networking
- Future forward design

**Storage Networking**
- Redundant, highly available
- 32G Fibre Channel or 12G SAS storage fabric

Network I/O Modules
PowerEdge MX9116n Fabric Switching Engine

High-performance, scalable 25G fabric switch
A comprehensive high-end L2/L3 switch with multi-chassis fabric scaling capabilities

Key Capabilities

• 16 x 25GbE server-facing ports, 2 x 100GbE Uplink ports, 2 x 100GbE/8 x 32G FC uplink ports, and 12 x Fabric Expansion/Uplink ports
• Each Fabric Expansion port can operate as 2 x 100GbE, 2 x 40GbE, 8 x 25GbE, 8 x 10GbE
• Supported in Fabrics A & B
• Supports all PowerEdge MX Ethernet Cards
• Supports Open Networking, Full Switch and SmartFabric operating modes
• < 450ns latency, 6.4 Tbps switching fabric
• NVMe over Fabric Ready

HIGHLIGHTS

• Optimum performance fabric switch providing high scalability at a low TCO
• Highly efficient embedded ToR functionality that reduces cost and improves performance & latency
• Industry’s first Open Networking fabric switch with ONIE and a choice of OS10 Enterprise Edition or select 3rd party OS
PowerEdge MX9116n Fabric Switching Engine
Typical Cable & Optic Options

- **When implementing a SmartFabric**, two QSFP28-DD cables are **REQUIRED** for the VLTi connection
- A QSFP28-DD cable between the MX9116n and MX7116n is **REQUIRED**. Using a QSFP28 cable is not supported

QSFP28-DD ports are backwards compatible and support QSFP28 and QSFP+ Optics and cables

QSFP28 ports are backwards compatible and support QSFP+ Optics and cables

NOTE: Not every option is presented on this page. Please contact your account team for additional options

**1GbE and 10G-BaseT are supported via the QSA28 adapter**

**NOTE:** The QSFP-64GFC-SW4 (4x16GFC Optic) is EoL as of 15 October 2020. Use Q28-128GFC-SW4 (4x32GFC Optic) instead.
Connecting to Non-Dell EMC 10GbE or 25GbE uplink ports
For example: Cisco, Arista, Juniper

The same optics & cables work on the QSFP+/QSFP28 ports on the MX5108n
Connecting MX9116n to Fibre Channel Switch

Use this when connecting to SFP FC ports

8/16/32G FC Optic (Vendor Specific)

Use this when connecting to QSFP FC ports

16/32G QSFP FC Optic (Vendor Specific)

CBL-MPO12-OM4-xM

Fibre Channel Switch

CBL-MPO12-4LC-OM4-xM

QSFP-64GFC-SW4 (8/16G) Or Q28-128GFC-SW4 (8/16/32G)

*NOTE: The QSFP-64GFC-SW4 (4x16GFC Optic) is EoL as of 15 October 2020. Use Q28-128GFC-SW4 (4x32GFC Optic) instead.
Each QSFP28-DD socket is comprised of two separately addressed physical ports.

A port group is a logical descriptor given to one or more physical ports that supports one or more logical configurations.

For example, port group 12 represents physical ports 39 and 40.
PowerEdge MX5108n Ethernet switch

Entry level, high performance, 25G Ethernet switch
Economical solution for single chassis configurations

Key Capabilities
• 8 x 25GbE server-facing ports, 2 x 100GbE uplink ports, 1 x 40GbE port and 4 x 10GBase-T ports
• Supported in Fabrics A & B
• Supports all PowerEdge MX Ethernet Cards except Broadcom 57504
• Supports Open Networking, Full Switch and SmartFabric operating modes
• < 800ns latency, 960Gbps switching fabric
• NVMe over Fabric Ready

HIGHLIGHTS
• High-performance, low-latency Ethernet switch for single chassis deployments
• Option of Dell EMC Networking Linux-based OS10 Enterprise Edition OS
• Industry’s first Open Networking blade switch with ONIE and a choice of select 3rd party OS

NOTE: The MX5108n does not support the Broadcom 57504 Quad Port Ethernet adapter
PowerEdge MX5108n Ethernet switch
Typical Cable & Optic Options

When implementing a SmartFabric, a VLT connection using ports 9 & 10 is **required** with both ports running at **40GE**.

Because port 10 defaults to 100GE, use a **40GE QSFP+ optic/cable**, not a 100GE QSFP28 optic/cable.

**NOTE**: Not every option is presented on this page. Contact your account team for additional options.

**NOTE**: The MX5108n does not support the Broadcom 57504 Quad Port Ethernet adapter.
PowerEdge MX7116n Fabric Expander Module

Low latency 25G fabric expander
Scales fabric bandwidth across multiple chassis

Key Capabilities
• 16 x 25GbE server-facing ports, 2x Fabric Expansion ports back to FSE
• Supported in Fabrics A & B
• Supports all PowerEdge MX Ethernet Cards
• No switching ASIC and no OS
• Sub ~75ns latency
• All switching done at FSE
• No port-to-port oversubscription
• Serves as a Pass-Through Module to select Dell EMC Networking Ethernet switches (10GbE & 25GbE*)

HIGHLIGHTS
• Low latency fabric expander module for efficiently scaling fabric bandwidth across a multi-chassis environment
• One cable supports 8 x 25GbE connections back to the FSE
• Nothing to manage, no firmware to update

*Requires OpenManage Enterprise – Modular v1.20.00 or later
## PowerEdge MX7116n Fabric Expander Module
### Cable & Optic Options

<table>
<thead>
<tr>
<th>To 2x QSFP28</th>
<th>To 8x SFP28</th>
<th>To 2x QSFP+</th>
<th>To 8x SFP+</th>
</tr>
</thead>
</table>

**NOTE:**
- A QSFP28-DD cable between the MX7116n and MX9116n is **REQUIRED**. Using a QSFP28 cable is not supported.
- Breakout is supported only to Dell EMC Switches.
- 10GbE Breakout requires OpenManage Enterprise Modular version 1.20.00 or higher.
- When using quad port NICs, both FEM ports must be connected to the same MX9116n FSE.
- If using the FEM as a Pass Through Module, the FEM ports can be connected to different ToR switches.

© Copyright 2021 Dell Inc.
Speed Compatibility for Cables/Optics

- When configuring a port for a specific speed or breakout, a compatible cable/optic must be used.
- DAC cables are generally multi-speed
  - For example, a QSFP28 DAC cable can run at 100G, 4x25G, 40G, 4x10G
- AOC cables and optical transceivers are generally single speed
  - For example, a QSFP28 optic can run at 100G or 4x25G. It cannot run at 40G or 4x10G
- Use the table below to ensure that the correct cable/optic is being used

<table>
<thead>
<tr>
<th>Description</th>

The QSA28 Adapter is a QSFP form factor carrier that allows a SFP, SFP+, or SFP28 optic/cable to be inserted into a QSFP+, QSFP28, or QSFP28-DD port. This provides the ability to support a single 1G, 10G, or 25G cable/optic.
PowerEdge MX Ethernet Pass-through Modules

25GbE Pass-through Module
- 16 x 25GbE internal ports
- 16 x SFP28 Ports

10G-BaseT Pass-throught Module
- 16 x 25GbE internal ports
- 16 x 10G-BaseT Ports

Key Capabilities
- 16 x 25GbE server-facing ports
- 16 x SFP28 or 10G-BaseT external ports
- Supported in Fabrics A & B
- Supports all PowerEdge MX Ethernet Cards

HIGHLIGHTS
- Simple Ethernet pass through from compute sled to external switch
- One cable per compute sled
- Nothing to manage, no firmware to update
PowerEdge 25GbE Pass-Through Module

Pass-Through Module Port Mapping – Dual Port NIC
PowerEdge MXG610s Fibre Channel Switch

High-performance, Brocade Gen 6 32G FC switch
The latest Fibre Channel technology for large scale Storage Area Networks

Key Capabilities
• 16 x 32G FC server-facing ports, 8 x 32G SFP FC ports, and 2 QSFP FC uplink ports (4 x 32G per QSFP)
• Supported in Fabric C Only
• Supports all MX Fibre Channel HBAs
• Designed for maximum flexibility and value with “pay-as-you-grow” scalability and Ports on Demand (PoD) licensing
• Compatible with Brocade and Cisco fabric/director class switches
• NVMe over Fabric Ready

HIGHLIGHTS
• High performance, non-blocking FC switch in a modular chassis platform for demanding all flash storage environments
• Ports on Demand licensing to “pay-as-you-grow”
• Simplified cable management using QSFP ports
PowerEdge MXG610s Fibre Channel Switch
Typical Cable & Optic Options

- SFP+, LWL, 16Gb, BR (Optic)
  OR
  SFP+, LWL, 32Gb, BR (Optic)

- 16/32GFC (LWL)

- SFP+, SWL, 16Gb, BR (Optic)
  OR
  SFP+, SWL, 32Gb, BR (Optic)
  AND
  CBL-LC-OM4-xM

- 16/32GFC (SWL)

- Breakout 4x 16/32 GFC

- QSFP+, SWL, 32Gb, BR (4x 32GFC Optic)
  AND
  CBL-MPO12-4LC-OM4-xM

NOTE: Not every option is presented on this page. Contact your account team for additional options.
MXG610s Additional Information

- Must be ordered in pairs
- Supports all PowerEdge MX Fibre Channel HBAs
- 3 base models available:
  - 8 activated ports & 2x FC32 SFP+ optics
  - 16 activated ports & 4x FC32 SFP+ optics
  - 16 activated ports & 8x FC32 SFP+ optics, Enterprise Bundle
- Additional port licenses can be added
- Additional 16G FC and 32G FC optics can be purchased for activated ports

**NOTE**: A port license is consumed when that port is activated, regardless if port is internal or external (QSFP ports count as 4 licenses)

**NOTE**: While 32 licensed ports is technically possible, 24 ports is the maximum number of ports that are usable. Don’t purchase more than 24 port licenses

The Enterprise bundle includes ISL Trunking, Fabric Vision, and Extended Fabric licenses:

- **ISL Trunking**: Provides the ability to aggregate multiple physical links into one logical link for enhanced network performance and fault tolerance. Also enables Brocade Access Gateway ISL Trunking (N_port Trunking)
- **Fabric Vision**: Enables MAPS (Monitoring and Alerting Policy Suite), Flow Vision, IO Insight, VM Insight, and ClearLink (a.k.a. D_Port) to non-Brocade devices
  - MAPS enables rules based monitoring and alerting capabilities, provides comprehensive dashboards to quickly troubleshoot problems in Brocade SAN environments
  - Flow Vision enables host to LUN flow monitoring, application flow mirroring for offline capture and deeper analysis, and test traffic flow generation function for SAN infrastructure validation
  - IO Insight automatically detects degraded storage IO performance with integrated device latency and IOPS monitoring embedded in the hardware
  - ClearLink (D_Port) to non-Brocade devices allows extensive diagnostic testing of links to devices other than Brocade switches and adapters. (Functionality requires support by attached device, availability to be checked by the user)

- **Extended Fabric**: Provides greater than 10km of switched fabric connectivity at full bandwidth over long distances

**NOTE**: These features are only available in the Enterprise Bundle - individual feature licenses are not available
## MXG610s: Popular SKUs

<table>
<thead>

</tr>
</tbody>
</table>

8 ports licensed = 6 servers & 2 external uplinks, 7 servers & 1 external uplink, or any combination that = 8  
16 ports licensed = 8 servers & up to 8 external uplinks (any combination of SFP+ & QSFP ports)*  
24 ports licensed = 8 servers & all 16 external uplinks

**NOTE:** If you need the enterprise bundle, purchase the SKU with the license included (210-AOCM). Do not purchase a different SKU and then add the stand-alone ENT license bundle

**NOTE:** QSFP ports use 4 activation licenses

**NOTE:** As of February 5, 2020, Brocade software licenses are delivered electronically to your Digital Locker

</tr>
</tbody>
</table>

• Mixing MX9116n and MX7116n within the same fabric *IS* allowed

• No mixing of Ethernet switch and Pass-Through Modules within the same fabric on MX7000
  – For example, MX9116n in A1 and 25G PTM in A2 is not allowed

• No mixing of Pass-Through Module speeds within the same fabric on MX7000
  – For example, 10G-BaseT PTM in A1 and 25G PTM in A2 is not allowed
Scalable Fabric Architecture
PowerEdge MX Scalable Fabric Architecture

How can multiple chassis behave like a single network?

**Legacy Modular Solutions**
- Ethernet switches in each chassis = Latency
- Multiple hops for east-west traffic = Latency
- Excessive cabling = Cost
- Multiple switches to manage = Cost

**Best-in-class Multi Chassis Ethernet**
- Aggregate 50Gbe to 400Gbe* bandwidth in each server
- <600ns “any-any” latency
- No server-to-server oversubscription
- Scales up to 10 chassis, 80 compute sleds
- 8x25Gbps over a single cable
- Cost effective, low TCO

*Requires Broadcom 57504 Quad Port Ethernet adapter
Scalable Fabric Architecture Topology – One Fabric

Chassis 1:
Slot A1: MX9116n
Slot A2: MX7116n

Chassis 2:
Slot A1: MX7116n
Slot A2: MX9116n

Chassis 3:
Slot A1: MX7116n
Slot A2: MX7116n

Chassis 10:
Slot A1: MX7116n
Slot A2: MX7116n

NOTE: If a Scalable Fabric has some chassis with Quad Port NICs and some with only Dual Port NICs, only the chassis with Quad Port NICs require the second FEM port to be connected.
Scalable Fabric Architecture Topology – Two Fabrics

Chassis 1:
- Slot A1: MX9116n
- Slot A2: MX7116n
- Slot B1: MX9116n
- Slot B2: MX7116n

Chassis 2:
- Slot A1: MX7116n
- Slot A2: MX9116n
- Slot B1: MX7116n
- Slot B2: MX9116n

Chassis 3:
- Slot A1: MX7116n
- Slot A2: MX7116n
- Slot B1: MX7116n
- Slot B2: MX7116n

Chassis 10:
- Slot A1: MX7116n
- Slot A2: MX7116n
- Slot B1: MX7116n
- Slot B2: MX7116n

NOTE: Fabric B is not required to be populated in every chassis.

NOTE: If a Scalable Fabric has some chassis with Quad Port NICs and some with only Dual Port NICs, only the chassis with Quad Port NICs require the second FEM port to be connected.
Newly Supported Scalable Fabric Topologies*

**Dual Port NICs**

These topologies are for scenarios where two physical NICs per server are required but only one pair of MX9116n FSEs are desired.

*These topologies are supported as of OME-M 1.20.00 and OS10.5.0.7 Full Switch and SmartFabric modes

Care must be taken to ensure proper cable placement
Newly Supported Scalable Fabric Topologies*

**Dual Port NICs**

These topologies are for scenarios where two physical NICs per server are required but only one pair of MX9116n FSEs are desired.

3-5 Chassis

Care must be taken to ensure proper cable placement

*These topologies are supported as of OME-M 1.20.00 and OS10.5.0.7 Full Switch and SmartFabric modes

Care must be taken to ensure proper cable placement.

*These topologies are supported as of OME-M 1.20.00 and OS10.5.0.7 Full Switch and SmartFabric modes.
Examples of **Unsupported** Scalable Fabric Topologies

These topologies are not supported
In order to provide optimal performance through the MX9116n FSE, it is recommended to connect the FEMs to the FSE in the following order:

- Connect FEMs from first two chassis to Port-Group 1
- Connect FEM from Chassis 4 to Port-Group 2
- Connect FEM from Chassis 6 to Port-Group 3
- Connect FEM from Chassis 8 to Port-Group 4
- Connect FEM from Chassis 3 to Port-Group 7
- Connect FEM from Chassis 5 to Port-Group 8
- Connect FEM from Chassis 7 to Port-Group 9
- Connect FEM from Chassis 10 to Port-Group 10

Unused QSFP28-DD ports can be utilized for additional uplinks, connections to rack servers, or VLT connections (VLT is required for SmartFabric Services).
PowerEdge MX networking with Embedded Top of Rack switching

Rack servers and other Ethernet devices can be connected directly to the MX9116n FSE via the appropriate breakout cable

- Rack servers do not need to be connected to separate Top of Rack switches
- Communication between all devices is kept within the FSE
- Provides a single point of management and network security
- Reduces cost and improves performance and latency
- Supported in Full Switch and SmartFabric modes
Example Topologies
Cable & Optic Option Key

The sample topologies in the following slides will use different cable types depending on the use-case.

Additionally, the cable/optic type used will vary depending on the length required.

1 – The QSFP-64GFC-SW4 (4x16GFC Optic) is EoL as of 15 October 2020. Use Q28-128GFC-SW4 (4x32GFC Optic) instead.
2 – SR4 transceivers support distances up to 150M over OM4 fiber. The MX7000 management modules use 1G BASE-T cables with a distance limit of 100M, therefore the effective useable length for a SR4 optic is 100M over OM4 fiber.

Fiber 3x cost of SMF                                                                                                                                  |
| SMF (Optical)| Single-Mode fiber  
9-um Tiny core fiber  
2/10Km reach  
Hard to attach components  
Transceivers are expensive  
SMF cost less than dental floss!                                                                                                                    |

There are three optical connectors used in PowerEdge MX Ethernet networking: SFP, QSFP, QSFP-DD.

For more information, see the Optic and Cable FAQ: [https://www.dell.com/support/kbdoc/000134129/faq-optics-and-cables](https://www.dell.com/support/kbdoc/000134129/faq-optics-and-cables)
## Cables & Connectors

<table>
<thead>
<tr>
<th>Consideration</th>
<th>Copper</th>
<th>Fiber</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deployment</td>
<td>Already installed in many locations and its use is less expensive to connect devices to a network. Copper solutions can get bulky when bunched together as they are thicker than fiber</td>
<td>Less bulky than copper solutions and easy to utilize breakout units (structured cabling) to deconstruct multi-lane runs into lower capacity end points (i.e. 100G -&gt; 4x25G)</td>
</tr>
<tr>
<td>Signal Loss</td>
<td>Copper cables can only transmit information over relatively short distances</td>
<td>Fiber optic cables experience less signal loss than copper cabling and can support long distances</td>
</tr>
<tr>
<td>Electro-Magnetic Interference (EMI)</td>
<td>Susceptible</td>
<td>Impervious</td>
</tr>
<tr>
<td>Security</td>
<td>Copper solutions are easier to tap</td>
<td>Fiber is more difficult to tap. Some Federal and large enterprises mandate Fiber as a result</td>
</tr>
<tr>
<td>Cost</td>
<td>RJ45 ($) → DAC ($$)</td>
<td>AOC ($$$) → Transceiver + Fiber ($$$$,)</td>
</tr>
</tbody>
</table>
Introduction to QSFP28-DD
Quad Small Form Factor Pluggable Double Density

- Current QSFP28 optical modules support 40 and 100 Gigabit Ethernet applications. They feature four electrical lane pairs that can operate at 10 or 25 Gbps.

- QSFP28-DD is designed with eight lanes that operate at up to 25 Gbps via NRZ modulation (up to 200 Gbps aggregate)

- QSFP56-DD is designed with eight lanes that operate at up to 50 Gbps via PAM4 modulation (up to 400 Gbps aggregate)

- QSFP-DD is backward compatible with QSFP+ and QSFP28 connectors

- Slightly deeper than QSFP28 with a second row of contacts

- Breakouts
  - QSFP-DD ↔ 2 × QSFP28 (100G)
  - QSFP-DD ↔ 4 × QSFP28 (50G as 2 × 25G, half-populated)
  - QSFP-DD ↔ 8 × SFP28 (25G)
QSFP28-DD in Depth

• Q28DD-200G-2SR4 optics require the use of 24-strand MPO cables. They will not function with MPO-12 cables used with Q28-100G-SR4 optics.
  – These cables can be described “MPO-12 Two Row” or “MPO-12DD

• Dell stocks MPO-12DD cables in lengths of 1, 3, 5, and 7 Meters.

• Implementations where Q28DD-200G-2SR4 optics are to be used with cable lengths expected to exceed 7 meters, please ensure MPO24 cables are sourced with the "MPO-12 Two row" or "MPO-24" form factor.

Note the difference in the MPO-12/MPO-24 diagram below, and also the photo captured showing two rows of 4 strands of transmit on a Q28DD-200G-2SR4 optic (each row of 12 strands operates as its own QSFP28-100G-SR4 link).

Corning Edge8®
Structured Cabling
EDGE8® Fiber Solutions from Corning

- Dell EMC Networking has a wide variety of Ethernet switches with ports that can be broken out into multiple lower speed ports. For example:
  - QSFP+ 40GbE can be decomposed to 4x10GbE or 4x1GbE
  - QSFP28 100GbE can be decomposed to 4x25GbE
  - QSFP28-DD 2x100GbE ports can be decomposed to 2x100GbE, 2x40GbE, 4x50GbE, 8x25GbE or 8x10GbE

- Why Structured Cabling?
  - Control cable sprawl
  - Organize, label and orchestrate a clean footprint so IT staff can quickly and predictably discern the purpose of each fiber run

- Dell EMC has partnered with Corning Structured Cabling Solutions to provide an easy to customize structured cabling solution
  - **Standard Dell ProDeploy and ProDeploy+ services do not include installation for Corning Structured Cabling Solutions. Contact your account team for options for a custom installation contract if needed**

- This solution provides rack housings from 1U to 4U allowing for multiple cassette types in each enclosure. The system has cassettes to do the following:
  - QSFP breakout to 4xLC (MPO12 to 4xLC)
  - QSFP to QSFP extension (MPO12 to MPO12)
  - QSFP-DD to 2xQSFP28 (MPO12-DD to 2xMPO12)
  - QSFP-DD to 8xLC (MPO12-DD to two 4xLC cartridges)
  - QSFP-DD to QSFP-DD extension (MPO12-DD to MPO12-DD)
EDGE8® HD Housings

- EDGE8® HD housings include
  - Mountings for standard 19” racks and cabinets
  - Sliding drawers, enabling module or panel installation from the front or rear of the housing.
  - Integrated cable routing elements to make real structured patch cord management possible while providing finger access without the need for tools or any other accessories.
  - Side-routing guides for patch cord integration to the cabinet which provide flexible installation options for back-to-back or flush-mounting requirements
  - Quick-mount capability making it quick and easy for one person to install the housing with little effort.
  - Easy labeling with a full-size mounting area on the inside of the front door
  - An easily installable trunk mounting plate providing flexibility depending on your design (e.g., back-to-back) or application (e.g., reduced depth) concept.
  - 1U, 2U, and 4U housing options
EDGE8® Modules & Adapter Panels

- **EDGE8® Modules**
  - The EDGE8® modules have an MPO interface on one side and four LC interfaces on the other.
  - All EDGE8® modules can be installed without tools from the front or the rear of any EDGE8® housing.
  - LC duplex adapters feature hinged shutters that move up and out of the way when the connector is inserted. Specially designed indents in the shutters ensure that the end faces of the connectors are never touched.
  - In addition, the shutters are visual fault locator (VFL) compatible to allow easy port identification while diffusing the VFL light to ensure adequate eye safety.

- **EDGE8® MPO Adapter Panels**
  - EDGE8® MPO adapter panels are pass-through panels that provide a simple interface to mate MPO connectors.
  - EDGE8® MPO adapter panels are available with one, two, and four 8-fiber adapters for multimode and single-mode applications. All panels feature unique shuttered reversible adapters at the front of the panel for on-site changes to manage field polarity, and visual port identification while defusing the VFL light to ensure adequate eye safety.
EDGE8® Patch, Trunk, and Jumper Cables

• EDGE8® Trunks
  – EDGE8® MPO trunks are used between patch panel housings and are pre-terminated cables with 8-fiber MPO connectors on both ends. All trunks have strain-relief clips and allow for tool-less installation in EDGE8® housings. These trunks conform to TIA-568 Type-B or Type-A polarity, depending on product selection. In addition, the trunks are standard with a pulling grip for easy handling during installation in cable tray or through fire wall pass throughs.

• EDGE8® MPO Patch Cords
  – EDGE8® 8-fiber MPO patch cords are typically used within racks between the device and an EDGE8® Module or Adapter panel. The EDGE8® MPO patch cord uses MTP® PRO connectors, which allows for a simple one-step, color-coded polarity change feature without removing the connector housing. The connector also provides the capability for field-friendly pinning configuration changes with safe handling of pins and easy color identification while maintaining product integrity.

• Reverse Polarity Uniboot Duplex Jumpers
  – EDGE™ reverse polarity uniboot duplex jumpers allow for the quick and easy conversion from a TIA-568 A-B polarity to a TIA-568 A-A polarity without exposing the fibers or needing any tools. The jumper comes with A-B polarity that can be leveraged for all described applications. This uniboot design allows one cable to carry both fibers, reducing jumper bulk when routing.

<tr>
<td>Sept 26, 2018</td>
<td>1.1.2</td>
<td>Corrected FC Gateway Topology, Fixed headers, updated cable images, corrected NPAR support for Intel NICs</td>
</tr>
<tr>
<td>October 25, 2018</td>
<td>1.2</td>
<td>Updated PTM image, Added additional cables &amp; optics to 25G PTM, Scalable Fabric design for Dual Fabrics, Clarified supported 40G optics, updated Mellanox NIC information, added Additional Resources section, information on connecting to Cisco switches, unsupported topologies for Scalable Fabric and SmartFabric services</td>
</tr>
<tr>
<td>January, 2019</td>
<td>1.3</td>
<td>Clarified items on the switch Quick Reference page, added IOM slot matrix, corrected SKU numbers, updated Dell EMC 4x32G FC optic to reflect support for 4x 8G FC, corrected description of MXG610s on QRG page, updated list of white papers</td>
</tr>
<tr>
<td>May, 2019</td>
<td>1.4</td>
<td>Clarified cables/optics for VLTi on MX5108, updated NPAR support on NIC QRG, corrected SKU numbers, updated resources and whitepaper links, updated MX7116n QRG, Updated Layout/Template</td>
</tr>
<tr>
<td>September, 2019</td>
<td>1.5</td>
<td>Updated multiple slides to add new cables/optics supported with OS10.5.0, Added Slide for MX7116n FEM as Pass-Through Module, Updated &amp; Added whitepaper links, Added information about Corning Edge8 Structured Cabling</td>
</tr>
<tr>
<td>March, 2020</td>
<td>1.6</td>
<td>Updated Brocade SKUs, Minor other corrections, updated broken links</td>
</tr>
<tr>
<td>June 2020</td>
<td>1.7</td>
<td>Clarified MXG610s QRG, Updated Edge8 ProDeploy policy, clarified number of NPAR partitions for Marvell NICs, updated max supported VLANs for switches, updated MX7116n breakout options for 10G Support</td>
</tr>
<tr>
<td>August 2020</td>
<td>1.8</td>
<td>Added content for Broadcom 57504 quad port NICs, Added content for new Scalable Fabric topologies, Added example topology for direct attached FC, corrected broken links, additional information on QSFP28-DD cables, minor updates and corrections</td>
</tr>
<tr>
<td>October 2020</td>
<td>1.9</td>
<td>Updated FC Mezz QRG, Adjusted to account for EOL of QSFP-64GFC-SW4</td>
</tr>
<tr>
<td>April 2021</td>
<td>1.10</td>
<td>Added cable configuration for QSFP to QSFP FC optic connection, updated multiple Scalable Fabric and example topology slides, added cable/speed compatibility slide, added C&amp;O FAQ and C&amp;O spec sheet link to resources section, Updated DD optic references to Q28DD-80G/200G-2SR4 Dual-Rate optic</td>
</tr>
</tbody>
</table>
