Dell provides optical and cabling options for each Ethernet speed. Long- and short-range optical connectivity options are suited to a wide range of data center and campus applications. For the shortest connections, passive copper direct attach cable (DAC) is a simple and cost-effective solution.

### 1GbE solutions

1GbE SFP optical transceivers include short-reach (SX), and long-reach (LX). A 1000BASE-T transceiver facilitates twisted-pair copper connections.

### 10GbE solutions

10GbE SFP+ optical transceivers include short-reach (SR), long-reach (LR) and extended long-reach (ER and ZR). The 10GbE SFP+ receptacle will also recognize 1GbE SFP transceivers. A 10Gbase-T transceiver facilitates twisted-pair copper connections. The 10GBase-T with rate adaptive feature can run at 10G on the host side and can be negotiated to any speed at far end link partner or line side.

### 25GbE solutions

25GbE SFP28 optical transceivers include short-reach (SR), extended short-reach (ESR) and long-reach (LR) variations. In 25GbE networking environments, the 100 and 400GbE ports can be broken out into four 25GbE lanes by use of either active optical (AOC) or passive copper (DAC) breakout cables.

### 40GbE solutions

40GbE (4x10GbE) QSFP+ optical transceivers include short-reach (SR4), and long-reach (LR4). In many cases, 1GbE SFP and 10GbE SFP+ optics can be readily inserted, recognized, and utilized in the 40GbE QSFP+ receptacle through the use of a (QSA28) pluggable adapter. The adapter supports standard SFP and SFP+ optics in a QSFP+ socket providing backwards compatibility, while the 40GbE port for future bandwidth expansion.

40GbE QSFP+ ports support both optical and passive copper (DAC) breakout cables where the four 10GbE lanes are broken out into four individual 10GbE SFP+ interfaces. This solution can be deployed with a single active optical cable (AOC) with integrated QSFP+ and SFP+ transceivers or using a passive fiber breakout cable.

Dell enables cost-savings through the reuse of a legacy 10GbE fiber plant to support newer 40GbE connections with our 40GbE duplex (multimode) fiber solutions. These solutions use wavelength multiplexing (SM4) and/or directional multiplexing (BIDI) to transport 40GbE over a single (multimode) fiber pair.

### 100GbE solutions

100GbE (4x25GbE) QSFP28 optical transceivers include short-reach (SR4), intermediate-reach (CWDM4), long-reach (LR4) and extended long-reach (ER4-lite). Standard 10GbE SFP+ and 25GbE SFP28 optics can be readily inserted, recognized, and utilized in the 100GbE QSFP28 receptacle using a (QSA28) pluggable adapter. Although this reduces the effective throughput of the 100GbE port to 25GbE, it provides an immediate low-cost transceiver solution while preserving the option for later bandwidth expansion. The hermetically sealed LR4 can be used for liquid immersion use cases. The hermetically sealed LR4 can be used for liquid immersion use cases.

100GbE QSFP28 ports support both optical and passive copper breakout cables. Each of the four 25 GbE lanes can be broken out into four individual SFP28 interfaces. This solution can be

deployed with a single active optical cable (AOC) with integrated QSFP28 and SFP28 transceivers or by a passive fiber breakout cable/multiplexer.

An active Ethernet cable also facilitates 400GbE QSFP56-DD to four 100GbE QSFP28 breakouts.

### Dual 100GbE solutions

To maximize front panel density, some Dell switches support QSFP28-DD (double density) modules which transport two 100GbE data streams while consuming the same face plate area as a single 100GbE QSFP28 module. For multimode fiber distances of 100 meters or less a pluggable transceiver module can be used. Point-to-point DACs and AOCs will facilitate shorter links as well as breakout applications.

### 400GbE solutions

Our newest family of optical transceivers are 400GbE QSFP56-DD. These transceivers may be short-reach (SR4.2-ON) over multimode fiber or intermediate-reach (FR4, EDR4) over single mode fiber. Point-to-point DACs and AOCs are available. 400GbE (8 x 50G PAM4) ports on one switch may be connected to 100GbE QSFP28 (4 x 25G NRZ) by taking advantage of the gearboxes embedded in the pluggable modules. As a result, a 400GbE QSFP56-DD EDR4 module may be broken out over single-mode fiber to feed four 100GbE QSFP28 FR modules. SR4.2-ON module may be broken out over multimode fiber to feed four 100GbE QSFP28 SR1.2 modules.

### Testing and warranties

Dell Networking applies a rigorous process in qualifying and maintaining all optics to guarantee a strict adherence to IEEE standards, as well as stringent reliability testing to guarantee a consistent and trustworthy solution. All optics and cables released by Dell Networking have passed a comprehensive optical analytics check as well as an extensive dynamic test suite. Dell-labeled optics are warranted alongside the Dell switches in which they are deployed.
