Cloudera Data Platform Private Cloud Base on Dell Infrastructure

Data management and multi-function analytics for on-premises IT environments

Cloudera Data Platform (CDP) Private Cloud Base is a next-generation, hybrid data platform with cloud-native, self-service analytic experiences bringing the speed, scale, and economics of the public cloud to your data center. CDP Private Cloud Base enables organizations with on-premises deployments to deliver powerful data analytics and machine learning in minutes to teams everywhere.

CDP Private Cloud Base is the unification of Cloudera Distribution for Apache® Hadoop® (CDH) and Hortonworks® Data Platform® (HDP), giving you the best of both worlds. This new software combines the best technologies from Cloudera and Hortonworks, with new features and enhancements across the stack, to form a hybrid data platform that encompasses the entire data lifecycle. This unified distribution is a scalable and customizable platform where you can securely run many types of data analytics workloads.

CDP Private Cloud Base is a stand-alone analytics platform. But it also supports a hybrid or multicluster solution, where compute tasks can be separated from data storage, and where data can be accessed from remote clusters. In this case, the CDP Private Cloud Base cluster is deployed alongside CDP Private Cloud Data Services, a separate computing cluster running on Kubernetes® such as Red Hat® OpenShift Container Platform which is deployed along with CDP Private Cloud Base.

Key differences from a traditional big data stack include:

- Elastic analytics running on a containerized compute cloud
- Highly scalable object storage separated from the compute layer
- A secure and governed data lake that combines data across the enterprise, and
- Consistent management services across all clouds, enabling hybrid cloud.

When paired with industry-leading Dell infrastructure, the potential use cases that can be addressed through this full-featured data platform are nearly limitless. A few that we’ve seen our customers successfully implement include: Customer 360 analytics, retail inventory and sales analysis, manufacturing operational analysis, eCommerce fraud prevention, network security intelligence, data warehouse consolidation and discount pricing optimization.
