If you're like most data professionals, locating and accessing your company's data is a full-time job.

In fact:

- 80% of data practitioners spend their time wrangling their data instead of innovating with it. This is because data is increasingly siloed across multicloud environments.
- 70% of companies use data warehouses and data lakes that are siloed and disconnected across public and private clouds. This makes data access both costly and limited.
- 73% of AI projects are unsuccessful or halted, with some industries seeing up to 92% failure rates.
- 83% of data management resource's time is spent innovating.
- 22% of data practitioners spend their time innovating with their data instead of wrangling it.

Companies need a better answer – one that works with data gravity, not against it.

Introducing Dell Data Lakehouse

Accelerate AI outcomes with help at every stage from trusted experts. Align a winning strategy, validate data sets, quickly implement your data platform and maintain secure, optimized operations.

By combining Dell's industry-leading infrastructure solutions with Starburst’s innovative query engine, the Dell Data Lakehouse delivers a comprehensive, end-to-end solution that enables organizations to extract maximum value from their data assets.

Together, Dell and Starburst empower organizations to thrive in today's data-driven landscape, driving growth, innovation, and competitive advantage with unparalleled speed and agility.

Look for EU proclamation: 2023 – RECOGNITION of Dell Technologies as one of the World's Best Management Consulting Firms – 2023 –

Accelerate your business' UNSTOPPABLE potential with an open, modern data lakehouse.

DELL DATA LAKEHOUSE

- ELIMINATE DATA SILOS: Enhance data exploration with secure, federated querying powered by Starburst, that accelerates time to insights and reveals usage patterns to enable smarter data centralization into the data lakehouse.
- TAKE CONTROL OF YOUR DATA: Because our Data Lakehouse is 100% open-format-driven and future-ready with modern industry standards and built-in data security and governance - which includes all the capabilities needed to manage access, privacy, and encryption, as well as things like monitoring and logging - you can remain in control of your data and navigate evolving landscapes with confidence and clarity.
- ACCELERATE INSIGHTS: Unlock unparalleled performance at scale through the separation of compute and storage to achieve peak performance levels, ensuring optimal efficiency and scalability across your operations.
- DEMOCRATIZE ANALYTICS AND AI: Give your data team self-service access to data products with integrations into a wide ecosystem to enable a wider reach for innovation across the organization and foster a culture of collaboration and exploration that moves your business forward.
- DO IT ALL WITH ONE SIMPLIFIED PLATFORM: Designed to streamline data operations and diminish complexity, this turnkey solution encompassing compute and software components simplifies deployment and lifecycle management to ensure efficiency and ease of management throughout your system’s lifespan.
