⚠ **WARNING: Whenever you need to lift the system, get others to assist you. To avoid injury, do not attempt to lift the system by yourself. Get others to assist you or use a mechanical lift.**

ⓘ **NOTE:** Begin installing the rails in the allotted space that is closest to the bottom of the rack enclosure. It is intended for use in a data center or server room.

❸

❹

❺
4 Securing or releasing the system from the rails.

⚠ WARNING: Power off the system before removing it from the rack.

ⓘ NOTE: To secure the system for shipment in the rack or in other unstable environments, locate the hard mount captive screw under each latch and tighten each screw using a Phillips #2 screwdriver.
