Advisory Services for Data Protection

Comprehensive Data Protection Strategies Tailored to Your Business

Business Challenge

Businesses face numerous challenges when it comes to protecting their data. From keeping up with changing regulations to managing complex multi-platform environments, and guarding against cyber threats or accidental data loss, it's a lot to handle. Plus, businesses need to ensure their data protection strategies are both effective and cost-efficient. As data grows and technology evolves, having a scalable and robust data protection plan is more important than ever.

The Global Data Protection Index (GDPI), a survey of 1500 IT and security decision makers from organizations around the world, found that

74% Are concerned their backup data could become infected or corrupted by ransomware attacks[1]

Dell's Advisory Services for Data Protection provide expert guidance to develop a data protection strategy that perfectly aligns with your business needs. By validating technical implementations through stakeholder engagement and policy reviews, we design an effective and efficient backup strategy. This reduces data loss, enables timely recovery and maintains data integrity, ultimately safeguarding your business operations and facilitating consensus among stakeholders.

Advisory Services for Data Protection

- Align your backup strategies with business policies to meet specific business needs and requirements

- Receive guidance on scaling, technology transitions, and effective reporting to sustain your data protection environment

- Achieve long-term effectiveness with solutions that are both business and technically validated and aligned, and receive expert advice on maintaining and optimizing your backup system

Our approach

Our Advisory Services for Data Protection is all about providing you with the expert guidance you need to design a solid backup solution using Dell products alone or alongside other vendors' solutions.

- **Evaluation**: We evaluate your existing data protection environment across multi-platform technologies, including architecture and operations, to understand how well your business aligns with data protection policies, technical capability, capacity, and performance.
- **Documentation**: We document business/application inputs and technical design requirements, including guiding principles and recommendations.
- **Awareness**: We provide awareness about independent and isolated backups to guard against accidental data destruction, highlighting the importance of data protection for your environment.
- **Operational and Business Needs**: We advise on the operational and business needs to maintain an effective data protection environment, ensuring your solution remains robust and reliable.
- **Guidance and Recommendations**: We offer guidance and recommendations for scaling, switching backup technology, reporting, measuring, and sustaining data protection requirements.
- **Documentation of Findings**: We document findings, risks, recommendations, and priority next steps roadmaps to give you a clear path forward to enhance your data protection strategy.
