Top reasons why Dell Technologies Services support data security

As data security concerns intensify, businesses require focused security strategies to help mitigate risk.

Dell Technologies Services is focused on helping businesses meet growing data security challenges. With recent innovations that support secure retention of parts as well as redeployment and retirement of assets, you can rest easy with the assurance that your data won’t fall into the wrong hands.

Data capital is essential to modern business and most companies consider it vital to success, but with big data comes big risk. The overwhelming growth of data and increasing concern for data security breaches create complexity. Dell Technologies Services can help protect the security of vital data assets.

Regulations and standards regarding data are ever-changing and carry mounting penalties and business risk. Maintaining compliance can be challenging especially for very sensitive industries or businesses carrying highly confidential data. Dell Technologies Services enable customers to comply with requirements, with alignment to the most updated standards including US NIST.

Failed parts pose serious risks, making sensitive information vulnerable to threats. For highly sensitive industries where the risk of data security breaches is very high, retaining those failed parts helps eliminate risk. Keep Your Hard Drive and Keep Your Component for Enterprise allow you to maintain possession over drives and components while simultaneously getting parts replaced. Sensitive data never leaves your control, ensuring security as well as enabling compliance with data privacy regulations.

Data Sanitization and Data Destruction for Enterprise Services use proprietary techniques, aligned to NIST 800-88 standards, to render data unrecoverable, ensuring data security on assets that will be repurposed or retired. Additionally, customers receive a Certificate of Compliance to satisfy requirements regarding secure handling of regulated data.

Dell Technologies Services, in partnership with Accenture, can help customers secure data on specific Dell EMC Server and Storage products as well as similar third-party systems. As part of this service, we remove old systems from your environment, securely sanitize data and responsibly reuse or recycle those systems to contribute to a more sustainable future.

To learn more about how to protect the security of your company’s critical data through Dell Technologies Services, visit DellTechnologies.com/Services or contact your Services sales representative.
