ProDeploy Plus is a comprehensive service providing seamless deployment of new technology. You get a single point of contact for project management including up-front planning, configuration, data migration and knowledge transfer. You will even be able to use system management software such as Microsoft Endpoint Manager or MDT to control configuration of new systems.

**TechDirect puts full control in your hands and real-time status updates at your fingertips.**

From the comfort of your office and with the click of a mouse, you will direct every task required to get new PCs from our factory to your employees’ desks, up and running. You can even check project status whenever you want from wherever you are. With TechDirect you can execute faster and with less risk for mistakes, thereby making the entire engagement more efficient.

Are you using system management software? If so, take advantage of Dell Connected Configuration to get a distribution point set up in our factory where you can configure your BIOS and image, and even complete domain join for each individual employee. If you are not using system management software, download Image Assist to create a single, cross platform image that we will dynamically update with the latest drivers as they are released.

Either way, configuration tasks are saved in TechDirect and automated in the factory which improves consistency and reduces the number of tasks and amount of time that must be spent onsite. We can even schedule installations after hours or on weekends. All of which minimizes employee down time.

**Dell ProDeploy Plus for Client Systems**

Dell ProDeploy Plus can save up to 50% of deployment time.

Relinquish the tedium, not the control.

Execute domain join through Connected Configuration or let our technician perform domain join onsite as part of the installation.

Provisioning for VMware® Workspace ONE™ yields a low-touch deployment and instant productivity.
Peer-to-peer data transfer is faster, more reliable and more secure because passwords do not need to be shared with technicians. Or we can adapt to your standard process for data migration.

IDC reports¹ that after PCs are deployed, employees can lose 1.85 hours due to lost data or settings. Our best practices ensure a reliable deployment which helps reduce post-deployment spikes in help desk calls. But to make sure your help desk is not impacted, we also provide 30-day post-deployment support. All of which saves your IT staff time and improves employee satisfaction.

Experts
- Deployment engineer develops implementation plan
- Single point of contact for project management
- Training credits help your IT staff and end-users keep skills up-to-date.
- Technology Service Manager engagement²

Insights
- Project documentation with knowledge transfer
- Factory distribution point for imaging and configuration of system management software³ such as Microsoft Endpoint Manager or MDT
