Please see the Appendix for detailed methodology, market definition, and scoring criteria.

March 2022, IDC #US48896919e
IDC OPINION

This study assesses 11 support providers that are participating in the worldwide support services IDC MarketScape model. Vendor selection included the major OEMs with extensive support portfolios. This assessment discusses both quantitative and qualitative characteristics that explain success in this important but mature market. The support industry is at an inflection point, particularly in the developed, enterprise sector. In those markets, penetration is very high, and it is becoming increasingly difficult for vendors to differentiate core services and supporting technologies. However, vendors have the opportunity to increase differentiation and create new annuity streams by developing services portfolios that impel enterprise customers to higher levels of support and management maturity, resulting in greater benefits for those customers. In addition, vendors that can continue to expand both core and advanced services into the midmarket and into emerging markets will continue to see success. Additional factors for success identified from this study — some of the initiatives we are beginning to see implemented by the more active vendors in the support market that is helping them propel themselves past some of their competition — include:

▪ Increasing adoption of consumption-based portfolios, which drive 100% attach rates for some services
▪ Assisting companies with new IoT and analytics solutions, which will need support solutions that may incorporate new technologies such as AR and VR
▪ Developing proactive methodologies such as machine-to-machine support solutions to help drive operational efficiencies and reduce costs and downtime to the customer
▪ Investing in the customer experience (CX), taking into consideration product and all aspects of service (a key point of contact within the vendors organization that advocates for the customer)
▪ Extending direct capabilities to the indirect channel, including training, business development, and marketing support in addition to the products and services portfolio
▪ Global consistency, which was a major need for larger multinational companies

IDC MARKETSCAPE VENDOR INCLUSION CRITERIA

In this IDC MarketScape assessment, support services providers must be able to maintain either servers, storage, or networking assets in a datacenter environment (details are provided in the section that follows) and have a minimum support revenue of $500 million per year to be included in this assessment.

Datacenter Equipment Support

▪ **Enterprise networking equipment**: This provides the classifications and definitions for the four major markets covered in IDC’s enterprise networks research: routers, LAN switches, enterprise VoIP equipment, and wireless LAN equipment.
Datacenter networks: A datacenter can be located at a service provider or an enterprise. The components of a datacenter infrastructure include network equipment, servers, and storage. Datacenter network infrastructure forecasts the network infrastructure that is purchased by enterprise and service provider datacenters. This includes spending on network equipment, such as routers, LAN switching, secure content and application delivery, WLAN, optical, and network management/OSS, as well as spending on enterprise connectivity software and products that provide the network infrastructure for IBM mainframes.

Servers: The servers category comprises all server hardware sales for all purposes, applications, and industries, including volume (servers with an ASP of <$25,000), midrange enterprise (servers with an ASP of $25,000-500,000), and high-end enterprise (servers with an ASP of >$500,000). Primary server segmentations are based on server class/price band, chip type, and operating system (OS).

Storage systems: Storage systems include disk storage systems, tape automation and tape libraries, and optical automation.

Storage networking infrastructure: Storage networking infrastructure comprises switches based on the Fibre Channel or FICON standards that connect servers, storage systems, and other devices to a storage area network.

VENDOR SUMMARY PROFILES

This section briefly explains IDC’s key observations resulting in a vendor’s position in the IDC MarketScape. While every vendor is evaluated against each of the criteria outlined in the Appendix, the description here provides a summary of each vendor’s strengths and challenges.

Dell

Dell is positioned in the Leaders category in this 2022 IDC MarketScape for worldwide support services.

Dell Technologies has made investments in a robust support strategy and continues to expand the core support offerings. The company has developed a broad range of capabilities in an easy-to-consume manner (Dell ProSupport Enterprise Suite) to help customers achieve their innovation goals. The tools and technology provide IT managers easy access to expertise and actionable insights related to their datacenter environment, allowing them to adopt the technology solutions that meet their business requirements without requiring them to have specific in-house expertise to support it. Dell Technologies’ service portfolio has offerings designed to address the new realities and challenges being faced by IT organizations. This includes continued evolution and focus on delivering more outcome-based experiences throughout the life cycle of the product and expansion to specialized support for solutions for offers such as Dell APEX.

ProSupport Enterprise Suite provides an easy-to-consume portfolio that customers can choose from to suit their particular support needs. IT staff can face a wide range of challenges each day. Some of these require expert tech-to-tech support, while others need the fastest possible parts dispatch. Some of the benefits of ProSupport for Enterprise include:

- 24 x 7 phone and remote access to Dell Technologies certified experts with local language support
- The opportunity for customers IT staff to become certified for online self-dispatch, enabling them to bypass phone troubleshooting and dispatch parts or labor using one portal
▪ Single point of accountability for escalation management with customer-defined severity levels and the option to choose mission-critical support or an enterprisewide contract
▪ Global command centers to manage critical situations, monitor all mission-critical onsite dispatches, and provide proactive crisis management during events such as natural disasters
▪ Collaborative support for select third-party hardware and software vendors
▪ Proactive monitoring, issue detection, notification, and automated case creation for accelerated issue resolution enabled by secure connect gateway technology
▪ Onsite service after remote diagnosis to match the target response objective needed by device

Customers looking for the next level of support can choose ProSupport Plus for Enterprise, which touts the following in addition to what is included in ProSupport:

▪ Advanced troubleshooting from an engineering team that understands the entire Dell Technologies' infrastructure solutions portfolio
▪ An assigned service account manager (SAM) who acts as its services advocate, ensuring efficient communication and smoother support experience, and for customers with Dell ProDeploy Plus for Enterprise, the SAM is involved throughout the process, bridging deployment to support
▪ Third party software support providing a single point of accountability for any eligible third-party software installed on the customers' infrastructure system, whether they purchased it from Dell Technologies or not
▪ Predictive analysis for issue prevention and optimization enabled by secure connect gateway solutions and semiannual systems maintenance to keep systems up to date with installation of latest firmware, BIOS, and drive updates to help improve performance and availability

**Strengths**

▪ Investments in a wide range of data-driven services technologies, from secure connect gateway for connectivity to self-service capabilities through TechDirect to a robust data visualization and insight portal with MyService360 and through integration with other product portals such as CloudIQ for a seamless customer experience
▪ A unified services portfolio that spans all Dell Technologies products, making it easy for customers to choose the services that are right for their needs
▪ The ability to provide globally consistent support through training programs, a large distribution network, and partnerships ecosystem

**Challenges**

▪ With such a broad portfolio of assets, it can be difficult to communicate all support capabilities to all customers, which can create a disconnect in what customers receive with the support they purchased.
▪ Keeping customers educated on their portfolio and communicating the results of some of the proactive things they are doing for their customers should be addressed, which can be by showing the value of the support the customer is receiving.
▪ Partners need to be brought further into the fold to continually enhance renewals and upsell of support services.
APPENDIX

Reading an IDC MarketScape Graph

For the purposes of this analysis, IDC divided potential key measures for success into two primary categories: capabilities and strategies.

Positioning on the y-axis reflects the vendor's current capabilities and menu of services and how well aligned the vendor is to customer needs. The capabilities category focuses on the capabilities of the company and product today, here and now. Under this category, IDC analysts will look at how well a vendor is building/delivering capabilities that enable it to execute its chosen strategy in the market.

Positioning on the x-axis, or strategies axis, indicates how well the vendor's future strategy aligns with what customers will require in three to five years. The strategies category focuses on high-level decisions and underlying assumptions about offerings, customer segments, and business and go-to-market plans for the next three to five years.

The size of the individual vendor markers in the IDC MarketScape represents the market share of each individual vendor within the specific market segment being assessed.

IDC MarketScape Methodology

IDC MarketScape criteria selection, weightings, and vendor scores represent well-researched IDC judgment about the market and specific vendors. IDC analysts tailor the range of standard characteristics by which vendors are measured through structured discussions, surveys, and interviews with market leaders, participants, and end users. Market weightings are based on user interviews, buyer surveys, and the input of IDC experts in each market. IDC analysts base individual vendor scores, and ultimately vendor positions on the IDC MarketScape, on detailed surveys and interviews with the vendors, publicly available information, and end-user experiences in an effort to provide an accurate and consistent assessment of each vendor's characteristics, behavior, and capability.

Market Definition

Support Services

Support services comprises telephone support, remote diagnostics, electronic support, onsite support, extended warranty, predictive/preventive maintenance, parts repair, and inventory/asset management services. IT help desk services dedicated to supporting a customer's application are considered support services. Hardware support services can be provided by either the hardware vendor or a third party and are either attached to the hardware or included in a site agreement.

Managed Support Services

Managed support services refer to high-end or mission-critical support services. Under the terms of a managed support services offering, the provider is responsible for proactively alerting customers about events or situations that are occurring in their environment or on discrete technology assets. Under the terms of a managed support agreement, the provider's legal liability is limited to providing an alert to the customer. After the alert has been sent, the provider may have additional responsibilities under the terms of a traditional support agreement. For example, the provider may be bound by response or resolution times as described in a support agreement. Examples of alert types for events are:
▪ Down system or device (This refers to a device that is no longer functioning.)
▪ Poorly performing system or device (This refers to a device or technology environment that is not performing optimally.)
▪ Potential problem (This refers to alerting a customer regarding a situation that could result in a down system.)

Once the vendor has alerted the customer, the customer can then decide how to address the alert. Typical customer decisions would be to:

▪ Address the alert internally
▪ Have the vendor that provided the alert address the problems under the terms of a support agreement
▪ Have another third party (i.e., a vendor that did not provide the alert) address the alert
▪ Ignore the alert

Synopsis

This IDC study uses the IDC MarketScape model to provide an assessment of several providers participating in the worldwide support services market. IDC MarketScape is an evaluation based on a comprehensive framework and a set of parameters that assesses providers relative to one another and to those factors expected to be most conducive to success in each market in both the short term and the long term.

"Support services is a mature market, with most vendors being capable of delivering support services. This IDC MarketScape aims to differentiate those firms that are investing in innovation to meet customers' needs. This requires a strategic road map for helping enterprise customers innovate, differentiate, and compete on technology, operational, and business playing fields. To do this successfully, support providers must have the right mix of people, process, and technology to meet the demand," said Rob Brothers, program vice president, Datacenter and Support Services.
About IDC

International Data Corporation (IDC) is the premier global provider of market intelligence, advisory services, and events for the information technology, telecommunications and consumer technology markets. IDC helps IT professionals, business executives, and the investment community make fact-based decisions on technology purchases and business strategy. More than 1,100 IDC analysts provide global, regional, and local expertise on technology and industry opportunities and trends in over 110 countries worldwide. For 50 years, IDC has provided strategic insights to help our clients achieve their key business objectives. IDC is a subsidiary of IDG, the world's leading technology media, research, and events company.
