</table>

**Infrastructure Observability**

- Know what's happening with your infrastructure, what will happen and what to do about it
  - Infrastructure health scores and recommendations for remediation
  - Performance and capacity forecasting and anomaly detection to avoid problems
  - Cybersecurity risk and incident notifications and recommendations
  - Energy and carbon footprint forecasting for making sustainability decisions
  - Generative AI for instant, in-depth answers to operational questions

**Application Observability**

- Know what is impacting your applications and what to do about it
  - Automated full-stack application visibility correlated with Dell infrastructure
  - High-fidelity, real-time data with 1-second metrics
  - Continuous monitoring for 300+ supported technologies
  - Rich understanding of contributing factors to incidents
  - Incident prevention through automated issue resolution
  - Predictive analytics for proactively identifying potential issues

**Incident Management**

- Reduce alert noise, incidents and time to resolution
  - Enterprise-wide event correlation into actionable incidents for reducing noise
  - Causality algorithms to identify probable root cause of incidents
  - Notifications mobilize specialists to see incident and root cause in a virtual situation room
  - Correlation with similar past incidents and their proven steps to remediate
  - Third-party tool integration to automate resolution

**Dell APEX AIOps**
Tame IT complexity across your digital business with AI-driven SaaS
