Is your data storage in sync with your organization's goals?

An as-a-Service model can help

The economics of storage infrastructure is beginning to change, which makes it easier for enterprises to deploy their data applications faster.

- Predictive analytics
- AI
- Big data applications
- Improved infrastructure with lower cost

APEX Data Storage Services are an enterprise-grade storage as-a-Service offering from Dell Technologies.

SIMPPLICITY

- Simple infrastructure
- Cloud-native storage
- Continuous data protection
- Runs on any hardware in any environment
- Flexible deployment model

APACHE radically simplifies your storage and management processes.

- Manage your storage as a service
- Storage is managed in the cloud
- Data is secure and compliant
- Access to data is simple and easy

How it works

APEX simplifies the complexity of storage management and allows businesses to focus on productivity and performance.

- APEX is a cloud-based storage solution that delivers on-demand capacity and performance without the complexity of managing a traditional infrastructure.
- It is designed to help businesses reduce costs and increase efficiency by providing scalable storage that can be expanded or reduced as needed.

Navigate your entire IT Journey

The APEX platform offers a comprehensive suite of tools and services designed to help businesses manage their storage needs effectively.

- APEX provides automated backup and disaster recovery capabilities to help protect your data from loss or damage.
- It offers advanced data management features such as compression, deduplication, and encryption to help businesses optimize their storage resources.
