It’s a multi-cloud world

With a vast array of public cloud vendors that are all continuously innovating and developing new capabilities, determining the right cloud for your organization is challenging. APEX Multi-Cloud Data Services enable organizations to leverage multiple clouds and gain the benefits of a multi-cloud strategy without the complexity of managing multiple data silos. APEX Multi-Cloud Data Services provides the ability to switch clouds quickly and easily based on specific application needs.

Why Dell Technologies APEX Multi-Cloud Data Services?

APEX Multi-Cloud Data Services offers multi-cloud agility with simultaneous public cloud access, so users can take advantage of the cloud services of choice, without moving data between clouds.

### Challenges of using multiple clouds

- **Increased performance and capacity availability**
- **Costly egress fees**
- **Operational and data silos**
- **Cloud vendor lock-in**

### A better way with multi-cloud

- **High performance and availability**
- **No excessive egress fees**
- **Operational and data silos**
- **Control over your data**
- **No public cloud vendor lock-in with data independent from the cloud**
- **Dynamic allocation of network bandwidth**
- **Simplified data security and compliance**

### Build your multi-cloud, your way

APEX Multi-Cloud Data Services offers multi-cloud agility with simultaneous public cloud access, so users can take advantage of the cloud services of choice, without moving data between clouds.

### Use the cloud you want, when you want.

Combine the performance and scale of Dell Technologies infrastructure with the economics and application services of the cloud.
