Managing today's complex business and IT environment

Organizations in every industry are seeking new ways to optimize their IT strategy, including embracing the on-demand scaling, quick provisioning and access to advanced services offered by cloud providers, often utilizing multiple providers at once. However, according to the Dell Innovation Index, management complexity and siloed experiences are cited as one of the top five roadblocks preventing organizations from pursuing multicloud environments.

Solution: Dell APEX Navigator for Multicloud Storage

Dell APEX Navigator for Multicloud Storage simplifies multicloud storage management complexity by breaking down siloed experiences with centralized management of Dell storage endpoints across multiple public clouds, all from within Dell APEX Console. This management tool enables ITOps and storage admins to deploy, configure and manage Dell storage in public clouds, monitor Dell storage, and seamlessly move data across on-premises and public clouds.

Accelerate deployments across public clouds

Rapidly deploy Dell storage in public cloud, in four easy steps, with simple configuration and automated provisioning of underlying public cloud resources and automated deployment of Dell storage software.

Centralized, consistent management

Centralize day-to-day storage management activities with link and launch access to familiar Dell storage management tools for a consistent experience across public cloud and on-premises. This centralized access to consistent experiences eliminates the need for retraining and improves the efficiency of lifecycle management activities.

Embrace automation

Dell APEX Navigator for Multicloud Storage is API-first, allowing you to integrate your preferred automation tools such as Ansible and Terraform, so it's simple to leverage Dell storage software as part of your broader cloud and IT automation strategy. Utilize public APIs to automate deployment, management and decommissioning of Dell storage in public clouds and move data from on-premises into public cloud and back.
Monitor across Dell storage landscapes
Take decisive actions based on intelligent insights that span your entire Dell storage environment with information regarding system health, performance, capacity and license inventory no matter where it’s deployed, with comprehensive monitoring provided by CloudIQ.

Drive data mobility
Continuously optimize your data strategy as business and workload requirements shift with data movement between Dell storage deployed on-premises and public clouds. This makes it easy to rapidly adjust where your data is stored, whether bringing it into public cloud for use with a specific service or bringing it back on-premises due to a change in your cloud strategy.

Accelerate Zero Trust Adoption
Security is a primary concern for every business, especially in the face of evolving threats and expanding threat landscapes. Dell APEX Navigator for Multicloud Storage keeps customers protected with a security approach that incorporates zero trust principles, including role-based access control (RBAC), single sign-on (SSO) and federated identity.
