

Revolutionizing IT Management: Zero-Touch Provisioning with Dell and Intel

The Solution: A New Era of Simplicity

Introducing Intel vPro® Provisioning for Dell Devices.

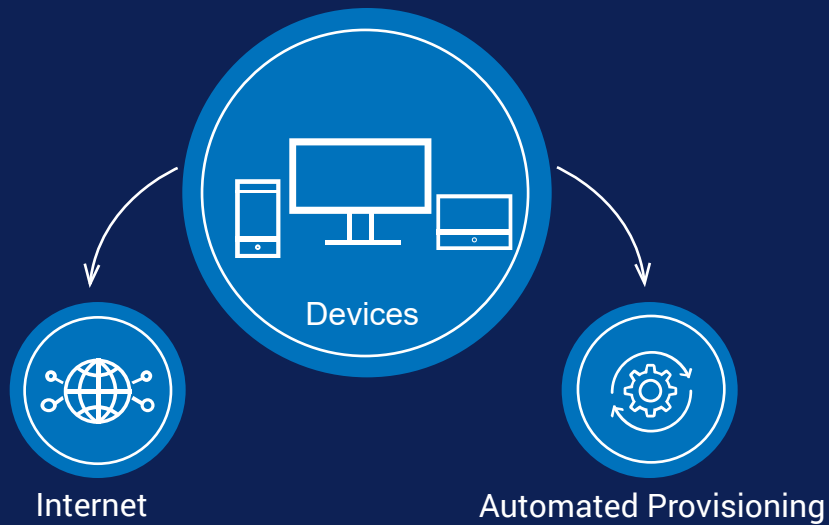

A Dell & Intel partnered solution.

“ The industry’s first cloud-based solution for zero-touch-provisioning of Intel vPro® on a fleet of PCs. ”

Empowering IT admins with seamless, secure, and remote Intel vPro® provisioning.

Say goodbye to manual configurations and unlock the full potential of your fleet, from anywhere.

Empower Your IT Admins With Seamless and Secure Provisioning

Intel vPro® Provisioning for Dell Devices is built on three core pillars to transform how you manage your fleet of Dell commercial PCs.

Simplify

Eliminate manual configurations and streamline Intel vPro® provisioning on Dell devices. Our intuitive, centralized console simplifies fleet management, freeing your IT team to focus on strategic initiatives instead of repetitive setup tasks. Activate devices right out of the box, with no physical intervention needed.

Secure

Ensure robust, end-to-end security across your entire fleet. We use Dell-signed ownership vouchers and the trusted platform features of Intel vPro® to safeguard your devices from vulnerabilities. This remote authentication establishes a secure foundation for management at scale.

Scale

Enable Intel vPro® provisioning on Dell devices across diverse environments, whether they are on-premises or remote. This solution works over both wired and wireless connections, allowing you to manage your entire fleet with unprecedented speed and efficiency. True fleet-scale management is now a reality.

From Manual Effort to Automated Excellence

The partnership between Dell and Intel removes the barriers to scalable Intel AMT activation. By automating ownership and trust, we help you unlock powerful out-of-band management capabilities across your fleet of Dell commercial PCs.

What This Means for You:

- **Diagnose and Resolve Remotely:** Use remote KVM (Keyboard, Video, Mouse) control to resolve issues, even when a PC is powered off or the operating system is unresponsive. You can take control and fix problems from anywhere, without needing to be physically present.
- **Secure and Isolate Threats:** Take advantage of hardware-based protections to keep your devices safe. You gain the ability to remotely isolate compromised PCs, preventing threats from spreading across your network and protecting your valuable data.
- **Automate Maintenance:** Schedule and deploy routine tasks like patch deployments and updates across the entire fleet. This automation reduces device downtime, minimizes manual intervention, and ensures your systems are always up to date.
