Inside the Remarkable Factory

How 5G can unlock the power of enterprise edge computing

5G networks can unlock the power of enterprise edge computing. Dell Technologies is pioneering a forum where software-defined, on-premises technology can be used to create tens of thousands of hyper-energetic smallscale distributed units, central units, and core services, each capable of delivering the opportunity to unlock new revenue streams, process real-time data, and reduce risk.

Embracing enterprise edge opportunities

CSPs can benefit from edge computing, which can deliver the opportunity to unlock new revenue streams, process real-time data, and reduce risk.

A partnership to realise exceptional potential

How Dell Technologies and Intel are supporting the remarkable Factory and driving a new revenue potential of 5G for the manufacturing sector.
