Modernize IT to run SAP and Oracle in an as-a-Service, multicloud world

Next generation financial and ERP applications are coming of age

Multicloud is the path to digital transformation

Financial and ERP applications are evolving

Workload placement matters

For traditional SAP and Oracle applications and databases, workload placement matters.

With Validated Designs for SAP and Oracle, Dell Technologies invests in integration, planning pitfalls.

Simplicity

IT leaders want the flexibility to choose the right path to best meet their objectives.

For application workloads and your business, a multicloud deployment approach can mean:

• Operational consistency across environments and ecosystems
• Improved spend predictability and flexibility
• Increased developer productivity
• Cloud services anywhere you want it
• Secure access to data no matter where it is located

Dell Validated Designs are tested and proven to accelerate as key workloads are needed to rethink which deployment models are best suited for mission-critical systems in the digital business.
