We are Dell Technologies OEM Solutions. Because Dell Technologies OEM Solutions understands that time-to-market matters, complexity abounds and our customers’ end-users experience is important, we design more Intel-based next-generation solutions to address these issues than any other company in the world.

We believe that the best customer solution is a designed solution. A solution designed to fit all our customers’ needs, including urgent current and future challenges. We understand these needs better because of the depth and scope of our experience with customers who are already facing unique issues.
WHAT WE DO

At OEM Solutions we embed our design capabilities with our customers’ (OEMs) product designs to enable them to be successful beyond what’s achievable themselves. Because our solutions are embedded in our customers’ products, we influence the perceptions and health of their brand and products, or IP, in the marketplace. We recognize this as a highly-trusted position in the partnership, and always work in the best interest of our customers.

Time matters, complexities abound, innovation differentiates and end-user experience is key. This is what OEM Solutions does:

- We design for a compressed time-to-market
- We design for a global scale
- We design to help our customers be even more innovative
- We design to create the best experience for our customer’s customer

HOW WE DO IT

Drawing from our capabilities, we design in-market solutions to differentiate our customers’ products leading to their own customers intuitively recognizing the products as the solution they need. This design process treats customers as unique, and recognizes the need of each customer to get their solution to market in a way that results in true differentiation that would be unachievable themselves.

OEM Solutions is uniquely positioned to leverage all of Dell Technologies’ capabilities. Our customers benefit from worldwide service and support, a global supply chain, innovative technologies, access to SMEs and a strong partner ecosystem, including our partnership with Intel®.
PowerScale OneFS
Software developed to lead application and performance needs for unstructured data from the edge (powering PowerScale nodes) to core (powering Isilon nodes), to the cloud (enabling multi-cloud or a cloud native experience).

Shifting media consumption models are challenging media and entertainment companies around the world. Increased content consumption across more devices in constantly increasing resolutions, is not only increasing the amount of data being generated in the industry, it’s also putting the pressure on IT teams and the infrastructure they manage, enabling creative teams to hit tighter deadlines for higher quality content without blowing the budget. Organizations of every size and discipline from the smallest post-production houses to large multi-national broadcasters are looking for solutions that can help them not only meet these new challenges, but also pursue new technical innovations and empower their creative process with new collaborative modalities that aren't limited by geography.
PowerScale OneFS

PowerScale OneFS is the scale-out NAS operating system that powers the new PowerScale all-flash and all-NVMe nodes and Isilon all-flash, hybrid and archive nodes.

PowerScale OneFS now goes beyond the datacenter all the way to the edge, core and multi-cloud – so you can deploy wherever you want and enjoy the same experience.

With PowerScale OneFS you can natively replicate data from PowerScale at the edge, to an Isilon in the core, to the cloud by using Dell Technologies Cloud PowerScale for Multi-cloud or Google Cloud. To support your go-to-market requirements, PowerScale OneFS software is OEM-Ready and available de-branded (no Dell branding) or with custom branding (your logo).
