

Dell NativeEdge with Nokia Private Wireless

Dell NativeEdge centralizes edge management across locations and automates operations. However, mission-critical edge solutions need a high-performance, highly reliable, and secure connectivity platform to ensure devices always connect and stay connected. Unfortunately, many enterprises find out too late that their existing connectivity is not designed to provide the performance required for AI-driven edge solutions.

Dell NativeEdge with Nokia Private Wireless unifies edge operations and wireless connectivity to accelerate AI innovation at the edge.

Accelerate edge outcomes

By centralizing management to effortlessly deploy and manage your edge estate with efficiency and agility

Automated operations

.....

Zero-touch provisioning

.....

Orchestration across your entire edge estate

Leverage high-performance connectivity

That meets the reliability and performance demands of your edge applications

Securely connect mission-critical applications

.....

Flexibility with 4G, 5G & WiFi options

.....

Simplicity with fully integrated private wireless solution

Protect your edge estate

By delivering zero-trust enabling technologies across data, application, and infrastructure layers

Zero-trust security

.....

Fortified data and applications from edge to cloud

.....

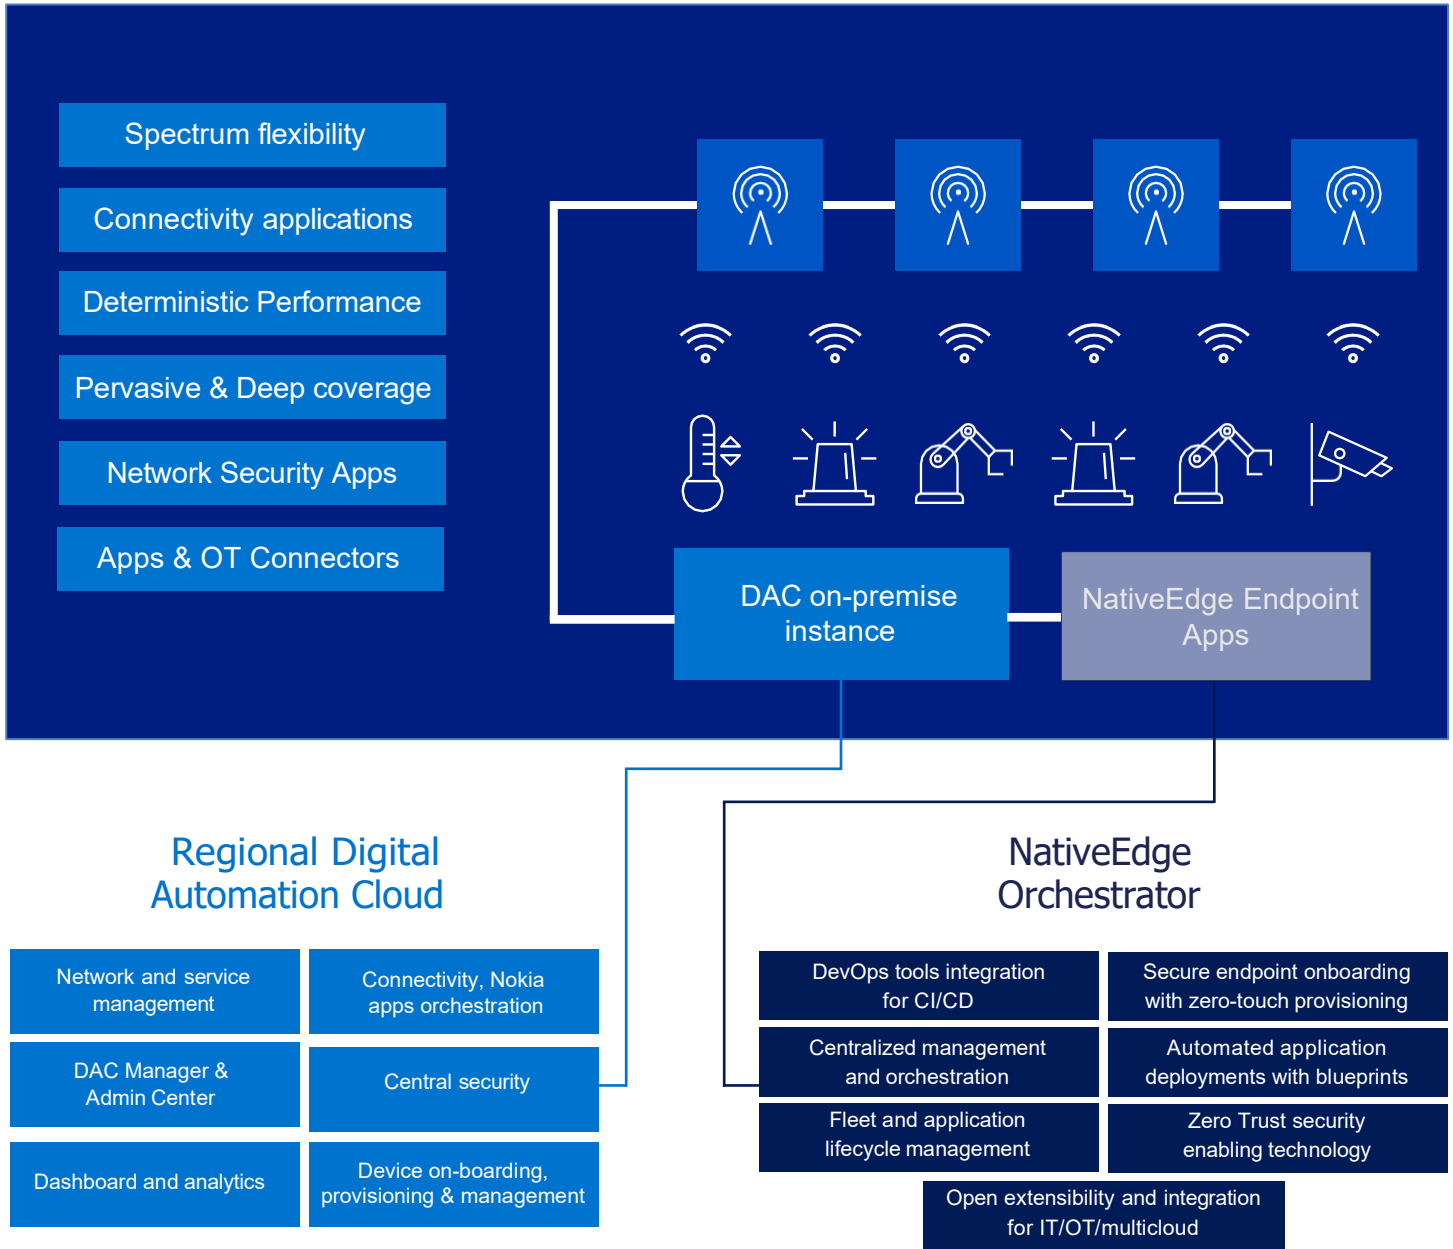

FIDO-enabled secure hardware

Manage and connect your edge estate

NativeEdge with Nokia Private Wireless centralizes edge management across locations, automates operations, and enables zero-trust security while providing high-performance, reliable, and secure connectivity. Enterprises can leverage NativeEdge with Nokia Private Wireless to securely manage and connect their estate to accelerate AI innovation at the edge and unleash its full business potential.
