

Dell Data Protection Suite

A comprehensive software bundle with backup, recovery, and management tools

Essentials

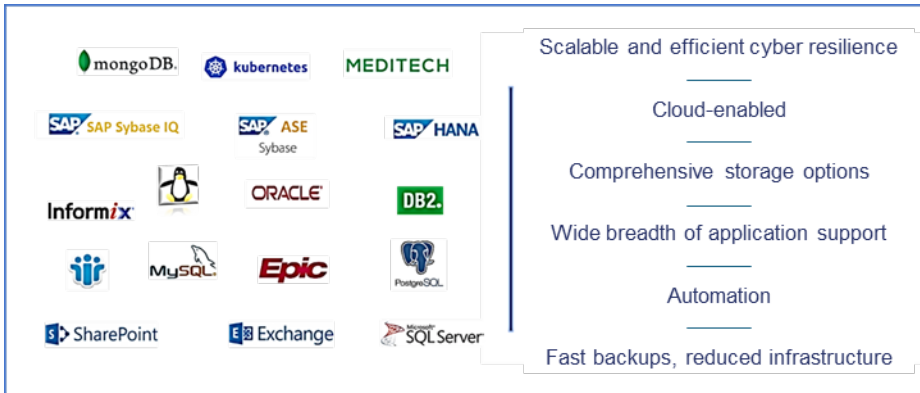

- Trusted by tens of thousands of customers
- Backup, recover and manage your protection environment with a single software suite
- Protect a wide range of applications, databases and platforms
- Extend protection to the cloud with backup to cloud, backup in-cloud, long term retention and cloud disaster recovery
- Flexible and consistent cyber resilience across virtual machines, cloud native applications and containers
- Quickly and easily recover from cyber incidents to ensure business continuity
- Protect data directly to Dell PowerProtect Data Domain for ultimate efficiency

Dell Data Protection Suite offers comprehensive cyber resilience software for increasingly complex modern IT environments, with solutions to meet your organization's specific needs.

Built on a foundation **Dell PowerProtect Data Manager, NetWorker** and **Avamar**, Data Protection Suite brings years of experience and innovation to bear on your cyber resilience infrastructure. Whether in your data center, in a virtual environment or in the cloud, Data Protection Suite has all the tools to protect your data, optimize your backup and recovery operations and modernize your IT infrastructure.

Comprehensive database and application support

With application consistent protection for leading databases and applications, Data Protection Suite empowers data owners to perform backup and restore operations directly from their native applications, while IT takes advantage of oversight and governance to ensure compliance. Automated policy management and discovery of file systems, virtual machines, databases and Kubernetes containers give you confidence that applications are protected needed to meet business requirements.

Secure and efficient multicloud cyber resilience

Data Protection Suite provides efficient and flexible cloud cyber resilience while taking advantage of cost-effective object storage. Back up data and applications in the cloud as well as to the cloud with AWS, Microsoft Azure or Google Cloud. In addition, you can extend cyber resilience to the cloud with disaster recovery, long-term retention, and protect cloud native workloads across single or multiple cloud environments.

Included in Data Protection Suite

PowerProtect Data Manager

A cyber resilience software platform for modern, multicloud workloads.

NetWorker

Secure your critical workloads with a consistent experience across heterogeneous applications and environments.

Avamar

Perform fast and efficient backup and recovery operations across physical, virtual and cloud environments.

Data Protection Advisor

Monitor and report across your data protection infrastructure, gaining critical visibility and predictability with actionable insights.

RecoverPoint for Virtual Machines

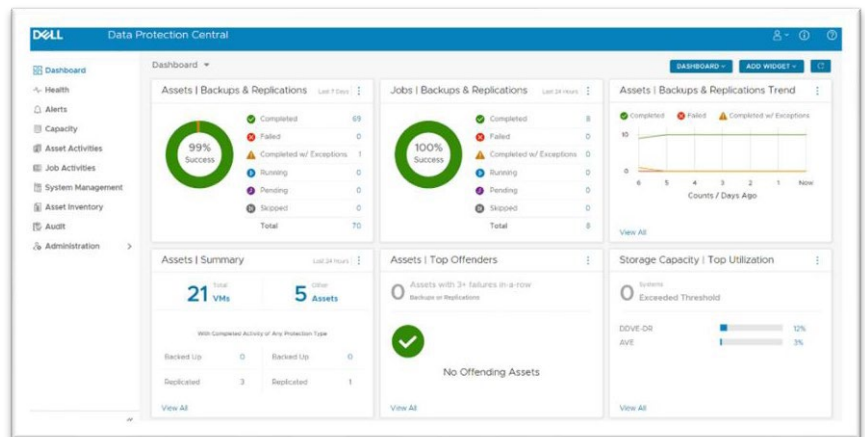

Deliver continuous data protection for operational and disaster recovery of VMware virtual machines for quick recovery to any point in time.

Multi hypervisor protection for virtual environments

Virtualized environments with multiple hypervisors can quickly become complex and impact integration with cyber resilience solutions. Data Protection Suite reduces these concerns via a single solution designed to support multiple hypervisors including VMware, Hyper-V, OpenStack, KVM and others. Tight Integration with VMware brings advanced capabilities including self-service backup and recovery from native interfaces, instant access to virtual machines, automated policy assignment and support for Tanzu modern applications. In addition, vAdministrators can leverage continuous replication with any point-in-time recovery right from vCenter.

Centralized management and governance

IT organizations face challenges with managing cyber resilience across diverse locations, a condition that drives the requirement for centralized visibility and management. Data Protection Suite provides a single dashboard view across multiple systems and multiple sites to streamline processes and provide business insight. Global oversight of application backups ensures compliance and governance.

Meet business needs and drive new outcomes

Data Protection Suite offers flexibility, efficiency and reliability at its core. This solution makes meeting your real-time business needs easy. Backup all your data with confidence and recover data with ease.
