

POWERMAX FAMILY

PowerMax 2000 and 8000

The newest enhancements to the PowerMax family raise the bar again for enterprise storage delivering unmatched levels of performance and consolidation for high-value, high-demand workloads of today and tomorrow. PowerMax supports 32Gb/s FC-NVMe to deliver on the promise of end-to-end NVMe, along with Storage Class Memory Drives (SCM) powered by dual port Intel® Optane™ drives used as persistent storage. NVMe/FC and SCM can further reduce system latencies by up to 50%. The PowerMax 2000 and 8000 arrays provide all of the features and proven data services demanded of an enterprise active-active controller array including security, protection, availability, scalability, and massive consolidation, now delivered at latencies measured in microseconds, not milliseconds. PowerMax real-time machine learning optimizes storage performance using pattern recognition and automated data placement, without any overhead.

The PowerMax 2000 and 8000 support end-to-end efficient encryption of data from the host to the PowerMax storage media. Efficient encryption utilizes an encryption agent on the host coupled with a hardware-based encryption option on the array that also preserves our data reduction (compression and inline dedupe) capabilities. Designed to be used in tandem with Data at Rest Encryption, this functionality provides true end-to-end data security.

A single PowerMax Brick is architected to provide six nines (99.9999%) of availability in the most demanding, mission-critical environments. Utilizing the powerful family of Intel® Xeon® E5 processors, the PowerMax 2000 and 8000 support both global, inline compression and deduplication for at least a 50% gain in data efficiency over the previous generation of arrays.

The PowerMax 2000 can fit its two available Bricks in half of a standard 19" rack, while the PowerMax 8000 redefines space efficiency with more than doubling the compute density by housing up to four Bricks in a single cabinet and up to eight Bricks in just two floor tiles. PowerMax arrays come fully pre-configured out of the factory to shorten the time to first I/O. Depending on the model, PowerMax arrays can support Open Systems, Mainframe, IBM i, and File all on the same array.

Specifications

Appliance-based packaging

PowerMax storage building blocks are defined by appliance-based entities called Bricks (or zBricks for Mainframe). Each Brick includes an engine with two PowerMax directors, packaged software, cache, and 24-slot Drive Array Enclosures. PowerMax arrays are available in two new software packages, the standard "Essentials" package and the application rich "Pro" package, which makes ordering easy.

Additional NVMe drive capacity can be added to each Brick or zBrick via Flash capacity packs for up to a total usable capacity of 1.2 PBe on the PowerMax 2000 and up to 4.5 PBe on the PowerMax 8000 (with global, inline compression and deduplication enabled). Detailed specifications and a comparison of the PowerMax 2000 and 8000 arrays follow:

**PowerMax
Array**

Array family	PowerMax 2000	PowerMax 8000
Bricks/zBricks		
Number of Bricks or zBricks ⁵	1 to 2	1 to 8
ENGINE ENCLOSURE	4u	4u
CPU	Intel Xeon E5-2650-v4 2.5 GHz 12 core ⁴	Intel Xeon E5-2697-v4 2.8 GHz 18 core ⁴
# CORES PER CPU/PER ENGINE/PER SYSTEM	12/48/96	18/72/576
DYNAMIC VIRTUAL MATRIX INTERCONNECT	Direct Connect InfiniBand 56 Gbps per port	InfiniBand Dual Redundant Fabric: 56 Gbps per port
CACHE		
CACHE-SYSTEM MIN (RAW)	512 GB	1,024 GB
CACHE-SYSTEM MAX (RAW)	4 TB (with 2,048 GB engine)	16 TB (with 2,048 GB engine)
CACHE-PER ENGINE OPTIONS	512 GB, 1 TB, and 2 TB	1 TB, 2 TB
VAULT		
VAULT STRATEGY	Vault to Flash	Vault to Flash
VAULT IMPLEMENTATION	2 to 4 NVMe Flash SLICs / Engine	4 to 8 NVMe Flash SLICs / Engine
FRONT END I/O MODULES		
MAXIMUM FRONT-END I/O MODULES/BRICK	8	8 ⁷
FRONT-END I/O MODULES AND PROTOCOLS SUPPORTED	4 x 32 Gbs (FC, SRDF) 4 x 32 Gbs (FC-NVMe) 4 x 16 Gbs (FC, SRDF) 10 GbE: 4 x 10 GbE (iSCSI, SRDF) 25 GbE: 4 x 25 GbE (iSCSI, SRDF)	4 x 32 Gbs (FC, SRDF) 4 x 32 Gbs (FC-NVMe) 4 x 16 Gbs (FC, SRDF) 10 GbE: 4 x 10 GbE (iSCSI, SRDF) 25 GbE: 4 x 25 GbE (iSCSI, SRDF) 4 x 16 Gbs (FICON)
eNAS I/O MODULES		
MAX eNAS I/O MODULES/ SOFTWARE DATA MOVER	3 ⁶	3 ⁶
eNAS I/O MODULES SUPPORTED	10 GbE: 2 x 10 GbE Optical 10 GbE: 2 x 10 GbE Cu ¹ 8 Gbs: 4 x 8 Gbs FC (Tape BU) ²	10 GbE: 2 x 10 GbE Optical 10 GbE: 2 x 10 GbE Cu ¹ 8 Gbs: 4 x 8 Gbs FC (Tape BU) ²
eNAS SOFTWARE DATA MOVERS		
MAX SOFTWARE DATA MOVERS	4 (3 Active + 1 Standby - 4 Data Movers requires minimum 2 Bricks)	8 (7 Active and 1 Standby - 8 Data Movers requires minimum 4 Bricks) ³
MAX NAS CAPACITY/ARRAY (TERABYTES USABLE)	1158 (cache limited)	3584
END-TO-END EFFICIENT ENCRYPTION MODULES		
REQUIRED TO SUPPORT END-TO-END EFFICIENT ENCRYPTION	2 per Brick – Maximum 4 per Array ⁸	2 per Brick – Maximum 16 per Array ⁸
CLOUD MOBILITY FOR DELL POWERMAX MODULES		
REQUIRED TO SUPPORT CLOUD MOBILITY	10GbE: 4 x 10GbE – 1 SLiC dedicated to a single director ⁹	10GbE: 4 x 10GbE – 1 SLiC dedicated to a single director ⁹

¹ Quantity one (1) 2 x 10 GbE Optical module is the default choice/Data Mover.

² Used to support NDMP Tape Backup.

³ Support for 8 Data Movers on the PowerMax 8000 is available by request.

⁴ CPUs run continuously in Turbo Mode except at significantly elevated ambient temperatures.

⁵ zBricks applicable to PowerMax 8000 only.

⁶ Two eNAS I/O modules/Datamover standard. Three can be supported depending on configuration via RPQ.

⁷ When born as a multi-engine system. A system born as single engine system is limited to 6 I/O modules per engine

⁸ End-to-end efficient encryption requires a single efficient data encryption module on each PowerBrick director in the array, and Data at Rest Encryption (D@RE) must be enabled. Efficient data encryption modules consume a Front End SLiC slot on each director.

⁹ Cloud Mobility requires a single 4 x 10GbE SLiC on one director of one engine in the array.

Array family	PowerMax 2000	PowerMax 8000
CAPACITY, DRIVES		
Max Capacity per Array (Open) ¹	1.2 PBe	4.5 PBe
Base Capacity per Brick (NAND, Open)	13.2 TBu ³	54.0 TBu
Base Capacity per Brick (SCM, Open)	21.0 TBu ⁵	21.0 TBu ⁵

Mainframe	No	Yes
Mixed Mainframe and Open	No	Yes
POWER OPTIONS		
Input Power Options	Single or Three Phase Delta or Wye	Single or Three Phase Delta or Wye

¹ Max capacity per array based on over provisioning ratio of 1.0 for a NAND or Mixed SCM/NAND based array. All SCM arrays will have lower maximum capacities.

² 192 drives can be supported in a single cabinet when two systems are packaged in the same rack.

³ 13.2TBu Brick and Flash capacity pack usable capacities are based on RAID 5 (7+1). 11.3TBu base capacity and Flash capacity pack increments possible with RAID 5(3+1) on PowerMax 2000.

⁴ Up to two consecutive drive capacities supported, e.g. 1.92TB and 3.84TB

⁵ Base capacities associated with the selection of an SCM only system, after which you are constrained to SCM only additional capacity. Available only with RAID 5(7+1), 1TB cache engines, and the PRO package.

⁶ SCM incremental capacity packs based on RAID 5(7+1). 2.25 TBu incremental is possible with RAID 5(3+1) on PowerMax 2000.

⁷ Incremental capacity packs under RAID1 are 15.0TBu minimum.

Array family	PowerMax 2000	PowerMax 8000
FRONT END AND SRDF I/O PROTOCOLS SUPPORTED		
32 Gb/s FC/FC-NVMe Host Ports		
Maximum/Brick	32	32 ¹
Maximum/Array	64	256 ¹

10 GbE SRDF Ports (Optical)		
Maximum/Brick	32	32 ¹
Maximum/array	64	256 ¹
25 GbE iSCSI Ports (Optical)		
Maximum/Brick	32	32 ¹
Maximum/array	64	256 ¹
25 GbE SRDF Ports (Optical)		
Maximum/Brick	32	32 ¹
Maximum/array	64	256 ¹
EMBEDDED eNAS PORTS		
10 GbE Optical Ports		
Max ports/Software Data Mover	4	4
Maximum ports/array	16	32
10 GbE Copper Ports		
Max ports/Software Data Mover	4	4
Maximum ports/array	16	32
8 Gb/s FC Tape Back Up Ports		
Max ports/Software Data Mover	2	2
Maximum ports/array	8	16

¹ Maximum number of ports/brick and maximum ports/array based on initial system sale as multi-brick. If system originates as a single brick, port counts will be reduced to a 24 per brick maximum and a 192 per array maximum.

System bay dispersion

System Bay Dispersion allows customers to separate any individual or contiguous group of system bays by up to a distance of 82 feet (25 meters) from System Bay 1. This provides unsurpassed datacenter flexibility in solving floor loading constraints or working around obstacles that might preclude fully contiguous configurations. This is only applicable to PowerMax 8000, as the PowerMax 2000 is a single bay solution.

Flash drive support

The PowerMax 2000 and PowerMax 8000 support the latest dual ported native NVMe Flash and SCM drives. All drives support two independent I/O channels with automatic failover and fault isolation. Check with your Dell sales representative for the latest list of supported drives and types. All capacities are based on 1 GB = 1,000,000,000 bytes. Actual usable capacity may vary depending upon configuration.

2.5" Supported NVMe Flash Drives used in Bricks and capacity pack upgrades

Platform support	PowerMax 2000/8000	PowerMax 2000/8000	PowerMax 2000/8000	PowerMax 2000/8000
Nominal capacity (GB)	1920 ¹	3840 ¹	7680 ¹	15360 ¹
Type	NVMe Flash	NVMe Flash	NVMe Flash	NVMe Flash
Raw Capacity (GB)	1920	3840	7680	15360
Open systems formatted capacity (GB) ³	1920.15	3840.30	7680.61	15047.65
Mainframe 3390 formatted capacity	1919.82 ²	3840.41 ²	7680.83 ²	15047.98 ²

2.5" Supported SCM Drives

Platform support	PowerMax 2000/8000	PowerMax 2000/8000
Nominal capacity (GB)	750 ¹	1500 ¹
Type	SCM	SCM
Raw Capacity (GB)	750	1500
Open systems formatted capacity (GB) ³	748.68	1499.13
Mainframe 3390 formatted capacity	749.89 ²	1499.79 ²

¹ Bricks and capacity pack upgrades in any given configuration could contain a maximum of two different underlying drive sizes to best achieve the desired usable capacity. This is automatically optimized by the configuration tools.

² Mainframe is not supported on PowerMax 2000.

³ Open systems formatted capacity is also referred to as TBu in this document.

Power consumption and heat dissipation at <26 degree C

Component	PowerMax 2000		PowerMax 8000	
	Maximum Total power consumption (kVA)	Maximum Heat dissipation (Btu/hr)	Maximum Total power consumption (kVA)	Maximum Heat dissipation (Btu/hr)

¹L = line or phase, N = neutral, G = ground

²An imbalance of AC input currents may exist on the three-phase power source feeding the array, depending on the configuration. The customer's electrician must be alerted to this possible condition to balance the phase-by-phase loading conditions within the customer's data center

Radio frequency interference

Electro-magnetic fields which include radio frequencies can interfere with the operation of electronic equipment. Dell products have been certified to withstand radio frequency interference in accordance with standard EN61000-4-3. In Data Centers that employ intentional radiators, such as cell phone repeaters, the maximum ambient RF field strength should not exceed 3 Volts /meter.

Repeater power level (watts)	Recommended minimum distance (feet/meters)
1	9.84 FT (3 M)
2	13.12 FT (4 M)
5	19.69 FT (6 M)
7	22.97 FT (7 M)
10	26.25 FT (8 M)
12	29.53 FT (9 M)
15	32.81 FT (10 M)

STATEMENT OF COMPLIANCE

Dell's Information Technology equipment is compliant with all currently applicable regulatory requirements for Electromagnetic Compatibility, Product Safety, and Environmental Regulations where placed on market.

Detailed regulatory information and verification of compliance is available at the Dell Regulatory Compliance website. http://dell.com/regulatory_compliance

This product has been tested and verified that it will function within the allowable range of environmental attributes of Operating condition class ASHRAE level A2 between 10 and 35 degrees C, and within the corresponding relative humidity range.
