

Dell EMC infrastructure for Algorithmic Trading

Problem

Algorithmic quant trading firms are in the midst of transitioning to support growing quant teams on increasingly larger data sets as they move their modeling from intraday to multi-day trading. This coupled with the exponential growth in daily transactions means that quants can no longer store the active trade data sets in memory and today's alternative solutions struggle to deliver the required performance at scale.

Dell EMC PowerScale

Dell EMC PowerScale delivers the high performance and extreme concurrency at scale from the edge to the entire data set. This shortens model development time with faster analysis on larger, multi-day trading data and extreme performance for smaller real-time data. Combined with its enterprise features, this enables a simple, efficient solution which accelerate cycles of learning by bridging historical and real-time databases while conforming to regulatory standards and guaranteeing enterprise data protection. PowerScale also offers a smaller footprint and lower cost of entry, ensuring seamless upgrades and compatibility with Isilon nodes.

✓ High Performance Edge for Data Subsets

✓ Massive Parallel IO for the Entire Data Set

✓ Extreme Performance for the Entire Data Set

STAC Benchmark: What does it mean?

The results showed the sweet spot for PowerScale based solutions to deliver real-time performance on smaller data sets (<10TB) and near real-time performance on large data sets (>10 TB) at high concurrency (100s into the millions).

Accelerate Model Development

Unrivaled All-Flash throughput and IOPS delivering real-time performance at massive scale to accelerate iterative analytic models to take advantage of time sensitive opportunities.

Unbounded Scale

Endless data scale and high concurrency that allows the same massive data sets to be interrogated by many users and thousands of simultaneous quantitative processes.

Simple Management and Security

Enterprise grade features delivers out of the box compliance and resiliency, industry leading storage efficiency and transparent data tiering between flash and disk.

¹The Dell EMC solution is up to 7.7x the speed of a solution involving a parallel file system with 14 database servers and 18 storage servers in the single-user NBBO operation (STAC-M3.β1.1T.NBBO.TIME). Based on a STAC-M3™ Benchmark commissioned by Dell EMC, 'STAC Report: kdb+ 3.6 on 9 x Dell EMC PowerEdge R640 servers accessing a single 3-node Dell EMC PowerScale F200 All-Flash cluster: SUT ID: KDB200914', September 2020, compared to SUT ID KDB200401. Results obtained in STAC-M3 Antuco benchmarks. DELL EMC POWERSCALE FOR DEEP LEARNING

Dell EMC PowerScale provides flexibility and informed choice with NVIDIA, the leader in AI. By pairing high performance, high bandwidth GPU accelerated compute with high performance, high bandwidth, scale-out flash storage we make AI simple for organizations looking to deploy large scale machine learning and deep learning. Alternatively, for organizations that need to start with a smaller footprint, PowerScale F200, F600 and F800 nodes with OneFS 9.0 provides high-performance storage at a lower cost of entry.

All-Dell EMC for AI BEST OF BREED

Customize your own high-performance scale-out AI environment with the AI optimized PowerScale F900, F800 and PowerEdge C4140. This solution can also be added as a performance tier to an existing cluster.

Dell EMC Validated Design for AI VMWARE-ENABLED AI WITH NVIDIA AI ENTERPRISE

[This solution](#) is built to simplify AI and deliver faster, deeper insights. Dell EMC's proven expertise lowers risk and shortens deployment times with validated technologies including hardware, AI software, and services.

Design Guide POWERSCALE WITH NVIDIA DGX-1 or DGX-2

This architecture pairs NVIDIA's 8-way GPU complex with Dell EMC's scale-out all-flash storage to give more flexibility in deploying large scale AI solutions.

DEEP LEARNING SOLUTION PORTFOLIO VALIDATION

Highlighted below are the results from the ResNet-50 benchmark performing an image classification convolutional neural network (CNN) on labeled images. Using the 148 GB ImageNet dataset as a foundation we made 150 exact copies of each image to create a 'real-life' 22.5 TB dataset which was larger than the server RAM and coherent shared PowerScale cache to ensure I/O operations during benchmarking.

SUMMARY BENCHMARK RESULTS

Dell EMC PowerScale and NVIDIA DGX-2 GPUs in combination result in:

- Maximize compute ROI with 97% or higher GPU utilization
- The maximum CPU core utilization on the DGX-2 system was 70%. This occurred with ResNet-50.
- There is no significant difference in image throughput between Linux Cache and PowerScale
- Linear performance scaling from 8 to 48 GPUs

DELL EMC POWERSCALE ACCELERATES AI BY ELIMINATING THE I/O BOTTLENECK AT SCALE

ACCELERATE INNOVATION

All Flash performance to accelerate model training cycles

IMPROVE DATA SCIENCE PRODUCTIVITY

Flexible in-place analytics and pre-validated solutions for faster, lower risk deployments

INCREASE MODEL ACCURACY

Deeper, higher resolution data sets with access to 10s TBs up to 10s PBs per cluster

SIMPLE SCALE-OUT DEPLOYMENTS

Start small and independently scale-out compute and storage for large scale deployments
