Application Transformation

The foundation for your digital strategy

Dave Deakin
Cloud Business Director
Dell Technologies

Today's discussion

Why?

What?

How?

Application Transformation allows you to...

Streamline IT Operations...

...which drives Cloud Strategy

... Funding your Transformation

Making It Real

Inhibitors to your digital future

SPEED

37%

uncertainty around how to create a culture of innovation

30%

inability to attract, develop and retain talent needed

21%

age or inflexibility of current technology assets

FUNDING

20%

lack of sufficient funding to invest in digital innovation

RISK

Traditional approaches

- Investments in developing new digital experiences might not match user expectations
- Inhibit software release frequency

We are too busy to transform... operations

Before and after

71% of IT budget
consumed by Business As Usual

“How many unique departmental or enterprise applications does your organisation manage?”

Sources: Gartner 2018 CEO Survey, Gartner 2019 CIO Agenda, Forrester Total Economic Impact of Dell EMC Application Portfolio Optimization

A new operational paradigm

T-Mobile reduced operational costs by two thirds

A large US healthcare provider reduced application operational costs by 23%

GAP needed weeks to get new features into production; now it takes 5 minutes

Comcast supports over 1500 developers with an operator team of 4 people

What happens with lift and shift to cloud

Percent of Public Applications Expected to Repatriate Over the Next Two Years (Average)

Q. Using your best guess, what proportion of the public cloud applications installed today will move to a private cloud, hosted private cloud or non-cloud environment over the next two years?

	Security	19%
	Performance	14%
	Cost	12%
	Control	12%
	Centralize/Reduce Shadow IT	11%

n = 400
Source: IDC's Cloud and AI Adoption Survey, January 2018

Cloud is amazing.... But you need to take an application and data view

- Application's drive engagement with your internal and external customers
- Access to applications and data should drive your:
 - Structure and engagement with the business
 - Infrastructure and technology strategy
 - Transformation Strategy as applications often represent large buckets of money to transform around.
- Traditional IT Ops is usually measured on cost out... but cloud is rarely cost effective for IaaS capability alone
- So how do we do this?

Discover how your business works and map the applications to them

Takes over 12 months manually
Dell EMC 4 – 8 weeks... Time to value

Set your cloud strategy from Your Existing Application Portfolio

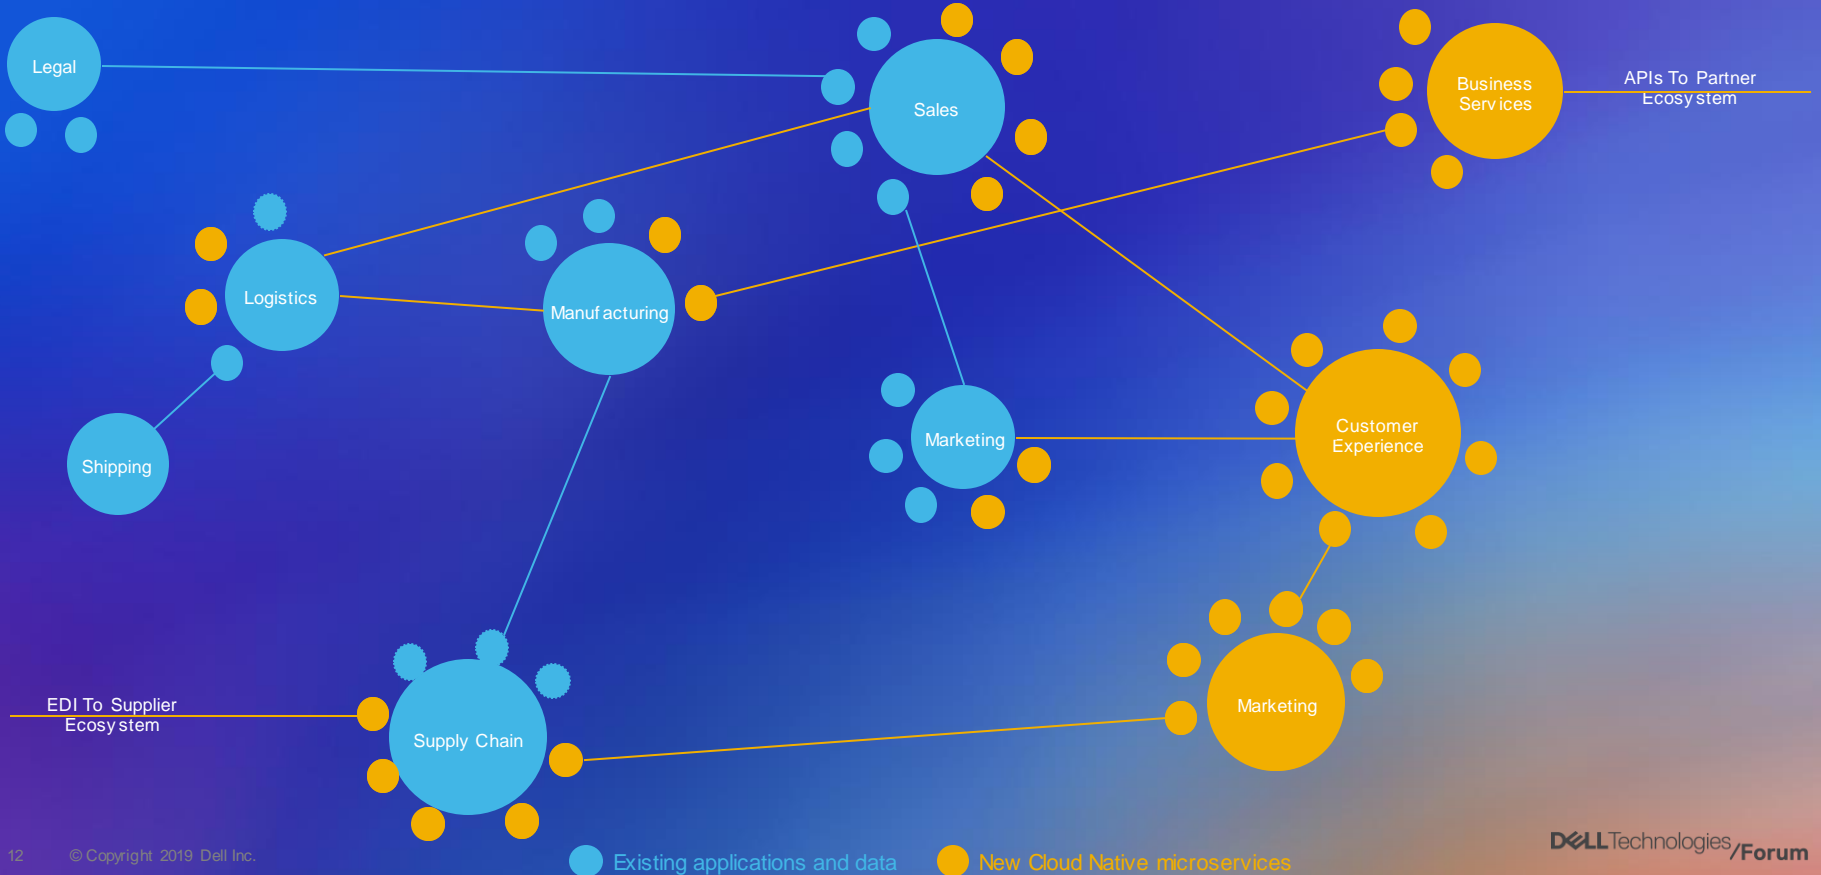

Dell Technologies Services helps you to assess, replatform, or refactor existing apps

Focus on data integration, rather than placement

Dell Boomi helps you integrate existing apps and data 3-5x faster than legacy middleware

Understand Supply and Demand....

Dell Technologies provides consistent developer and operator experience across multiple clouds

Understand Supply and Demand....

In summary

- Applications should drive your cloud strategy
- Treating applications often funds your Organisational and technology transformation
- Buying Infrastructure rather than build, secures and saves.
- Rapidly get through your discovery to start banking benefit.
- Work with a partner to look at low hanging fruit....
- Introducing Datacom.

The Challenge

The Challenge

Our history

- Our digital footprint, through merger, organic growth and acquisition, has grown into a significant and complex portfolio.
- M&A has fuelled the growth in many ERP/CRM and specific applications
- Our history and digital footprint inhibits a single Datacom response as we assemble to meet the market needs
- Lack of a clear master application portfolio slows down delivery to market
- **Key driver for change - One Datacom**

DELLTechnologies /Forum

The Transformation Process

The Transformation Process

Where we started

- Multiple core finance applications with separate P&L's
- On premise, limited multi jurisdiction capability
- More invoices within Datacom than to actual clients
- Custom built services
- Point to point integrations
- Specialised applications
- Various duplicated technologies
- Limited data standards
- Untraceable integration paths

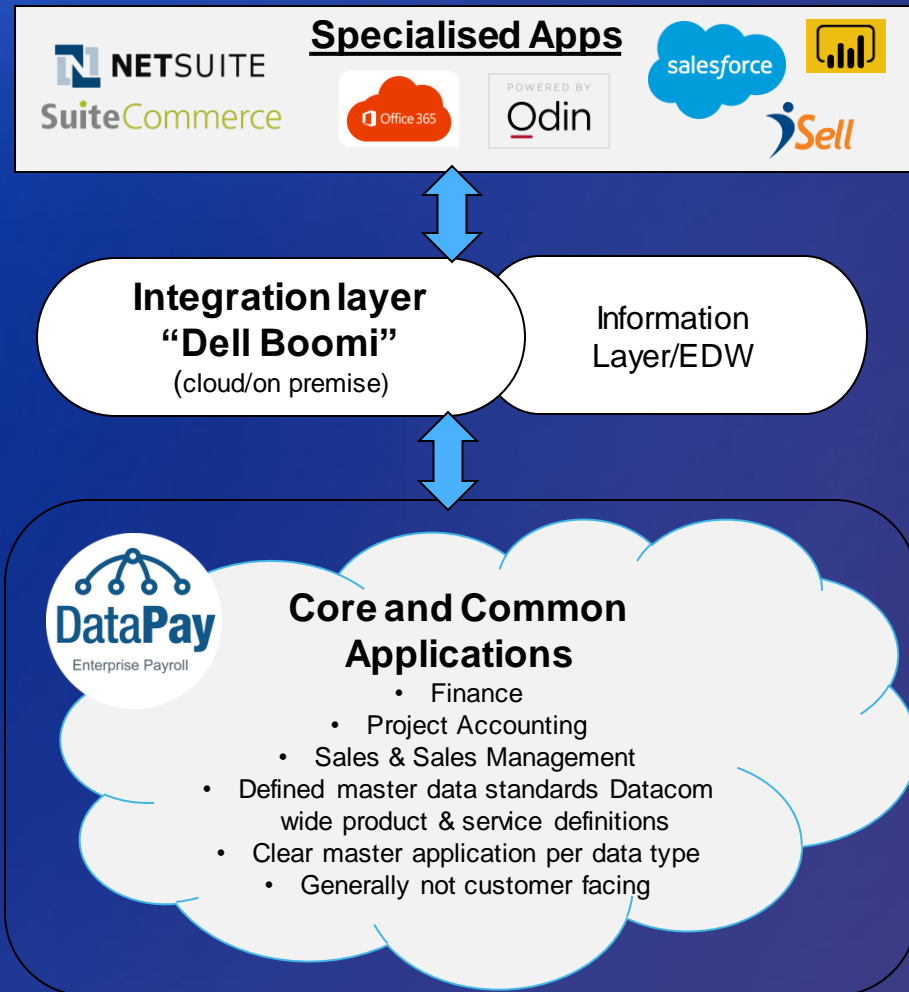

The Transformation Process

What was reviewed

- The need to service our customers better?
- What technology do we use from cloud?
- What technology needs to be on prem?
- How should we integrate with **hybrid** and **multi-cloud** requirement into our new technology stack?
- Can this be secure?
- **Answer = DELL Boomi**

The Transformation Process

Where we're heading
Consolidating our set of “**Best of Breed**” solutions to support specific offerings, either directly customer facing, or via information layer

The Transformation Process

1. Build and rollout the new core
 - Customer centric, coordinated delivery of services direct to the customer, removal of intra Datacom charging

2. Consolidate the Best of Breed apps
 - Determine if the specialist apps are really unique,
 - Determine purpose of the apps,

UNDER REVIEW

3. Optimise the solution
 - Maintain the architecture
 - Continual balance of agility, extensibility, maintainability

DELLTechnologies /Forum

The Outcomes

The Outcomes

Critical learnings

- Senior management engagement and understanding
- Clarity of transformation objectives and continual re-inforcement of them in the target architecture - One Datacom and Seamless Customer Delivery
- Not done in isolation, need more work around our expectations of people whatever level they work at
- Not a one-off, continual change is a mind set, we need to be good at doing it

The Outcomes

Reflective learnings

- Digital transformation in a organisation full of digital opinions and technology preferences are very challenging
- Standards and principles aren't sexy and articulating the benefits of them can be tricky

DATACOM

DATACOM has figured out how to integrate M&A, with multi-cloud applications and business services to drive digital transformation to serve customers better
