

## Dell EMC SD-WAN Solution for telemedicine

Adapt to change, improve availability, and assure application performance

### Transform the edge for remote work

Your medical workforce is now operating remotely and IT needs a way to provide reliable access to business-critical applications. Dell EMC SD-WAN Solution powered by VMware is here to help, with a full suite of features to solve the challenges presented by remote work. Whether you are a clinician or an administrator, with the SD-WAN Solution, you can:

- **Support mission-critical workloads** like imaging, voice, video conferencing, and VDI with confidence, even on home networks
- **Become more agile** with centralized management delivered via the Cloud, enabling your business to rapidly adapt to change
- **Ensure business continuity** with improved application performance, increased availability, and continued innovation for your team

**Simplicity and agility:**  
All-in-one appliances for  
turnkey modernization

**Performance and efficiency:**  
Boost application performance  
and centralize management

**Scale and trust:**  
Full lifecycle support and services  
from a single vendor

## Empower remote work with Dell Technologies

Dell Technologies provides a range of solutions optimized for users working from home:

- Business Laptops and 2-in-1 PCs
- Dell UltraSharp and professional monitors
- Docking stations and stands
- Keyboards and mice
- Audio headsets, speakers, and microphones
- Webcams and video conference equipment
- Financing available from Dell Financial Services

| Work-From-Home challenges   | Dell EMC SD-WAN Solution  |
|---|---|
| Branch office network traffic has now shifted to home Internet connections                                    | Advanced SD-WAN software makes broadband stable and <b>provides fast, reliable and secure connectivity</b> to business critical applications          |
| Business workloads sharing bandwidth with gaming, streaming, and other residential traffic                    | SD-WAN <b>improves application performance</b> and provides IT with powerful QoS tools for prioritization and visibility into key metrics on the link |
| New edge sites need to be added to the wide area network in a time of restrained travel and social distancing | Simple low-touch deployment with no technical skills needed on site, IT <b>configures and turns-up new sites remotely</b>                             |
| Employees need access to IaaS, SaaS, and Cloud resources  | Eliminates costly backhaul traffic and <b>optimizes cloud and data center delivered applications</b>  |
