A recent IDC survey addressed the role of modernized data protection infrastructure and hybrid cloud in effective workload placement, provisioning and management. The results further emphasize the importance of consistent and managed data protection infrastructure in organizations. 91% of organizations surveyed view modernized infrastructure as a critical determinant of digital transformation success.¹

Among organizations that had completed data protection refresh projects, the benefits were significant.

- 80% of respondents reduced unplanned downtime up to 25%²
- 84% of organizations surveyed reported an RPO improvement up to 25%²
- 15% of organizations surveyed reported an RTD improvement up to 75%²

The goal of data protection refreshes is to protect the business’ ability to operate and, if needed, to recover data faster and more completely — specifically, to improve service-level agreements (SLAs), reducing downtime and data loss while increasing data availability. Protect your data with industry-leading data protection appliances and software solutions from Dell Technologies.³

Improve performance with data protection from Dell Technologies.

The Dell EMC data protection portfolio includes data protection and backup appliances (referred to as purpose-built backup appliances [PBBAs]) and data protection and backup software that allows organizations to protect their data across private and public clouds and edge locations. Plus, gain additional value using Dell Technologies On Demand (DTOD), which combines flexible payment solutions and value-added services, a pay-as-you-grow model and predictable payments over an agreed-upon term. With on-demand resource access, pricing transparency and predictability, DTOD is perfect for the way your organization consumes infrastructure.
