We are Dell Technologies OEM Solutions. Because Dell Technologies OEM Solutions understands that time-to-market matters, complexity abounds and our customers’ end-users experience is important, we design more Intel-based next-generation solutions to address these issues than any other company in the world.

We believe that the best customer solution is a designed solution. A solution designed to fit all our customers’ needs, including urgent current and future challenges. We understand these needs better because of the depth and scope of our experience with customers who are already facing unique issues.
WHAT WE DO

In OEM solutions we embed our design capabilities with our customers’ (OEMs) product designs to enable them to be successful beyond what’s achievable themselves. Because our solutions are embedded in our customers’ products, we influence the perceptions and health of their brand and products, or IP, in the marketplace. We recognize this as a highly-trusted position in the partnership, and always work in the best interest of our customers.

TIME MATTERS, COMPLEXITIES ABOUND, INNOVATION DIFFERENTIATES AND END-USER EXPERIENCE IS KEY. THIS IS WHAT OEM SOLUTIONS DOES:

• We design for a compressed time-to-market
• We design for a global scale
• We design to help our customers be even more innovative
• We design to create the best experience for our customer’s customer
HOW WE DO IT

Drawing from our capabilities, we design in-market solutions to differentiate our customers' products leading to their own customers intuitively recognizing the products as the solution they need. This design process treats customers as unique, and recognizes the need of each customer to get their solution to market in a way that results in true differentiation that would be unachievable themselves.

OEM Solutions is uniquely positioned to leverage all of Dell Technologies' capabilities. Our customers benefit from worldwide service and support, a global supply chain, innovative technologies, access to SMEs and a strong partner ecosystem, including our partnership with Intel®.
Knowledge and data needs are increasing day by day in healthcare and life sciences. Genomic Sequencing is becoming standard practice, with the amount of knowledge to be integrated in clinical analysis increasing exponentially. To this is added Wearables & IOT, collecting and transmitting data from the field, AR/VR to display patient in videos to family, virtual work teams and Doctor-on-demand services.

Additionally, artificial Intelligence has a demand for fast data access and analysis, while more powerful scanners require new levels of resolution and corresponding file size. For all of this, Dell PowerScale solutions are perfectly placed to operate successfully.
PowerScale OneFS is the scale-out NAS operating system that powers the new PowerScale all-flash and all-NVMe nodes and Isilon all-flash, hybrid and archive nodes.

PowerScale OneFS now goes beyond the datacenter all the way to the edge, core and multi-cloud – so you can deploy wherever you want and enjoy the same experience.

With PowerScale OneFS you can natively replicate data from PowerScale at the edge, to an Isilon in the core, to the cloud by using Dell Technologies Cloud PowerScale for Multi-cloud or Google Cloud. To support your go-to-market requirements, PowerScale OneFS software is OEM-Ready and available de-branded (no Dell branding) or with custom branding (your logo).
PowerScale OneFS
With a single namespace cluster giving you the ability to scale up for capacity, scale down for the edge, and scale out for the cloud, PowerScale OneFS operating system has multi-protocol support for NFS, SMB, HDFS, S3, REST, HTTP, NDMP, and FTP. PowerScale OneFS is DevOps ready with Ansible Kubernetes and OpenShift integration, so developers can now easily code to it. With Dell EMC PowerScale SmartPools (resource management), SmartDedupe (deduplication), SmartQuotas (quota management), SmartLock (WORM), SyncIQ (replication), CloudPools (tiering to the cloud), DataIQ (insights into data), CloudIQ (insights into the infrastructure) and much more, you have a wealth of rich data services at your disposal.
