Transform workforce experiences with an intelligent, unified approach to IT.
Users are on the go, working from almost anywhere and on multiple devices, reshaping the traditional work-place. We know for you as an IT leader this means more:

- devices to provision and deploy
- end points to secure
- applications to support
- systems to manage

Which results in more headaches for you and less time to focus on more important, strategic initiatives.

And your role has transformed too; you’re now a critical partner of the company’s leadership. You’re thinking about bringing the best experience to your users, accelerating collaboration and maximizing productivity. You’re being tasked to help the company remain innovative. With all of these added responsibilities, thinking about the more repetitive tasks like resetting user passwords and giving access to VPN should be a thing of the past.

At Dell Technologies, we understand your top priority is transforming your organization for ultimate value and efficiency — for yourself and your end users.

Now you can — with Dell Technologies Unified Workspace, we solve your biggest pain points. Get an intelligent, unified approach that gives you improved visibility, insights and automation to streamline processes and deliver exceptional user experiences.

Modernize deployment with ProDeploy in the Unified Workspace

People are changing the way they work through multiple devices, locations, and accessing files and applications on and off network. This means that previously time-consuming tasks like setting up PCs for new hires are now even more of a challenge.

In the past, provisioning looks something like the above: You spend weeks ordering and configuring machines. Then you manage the delivery process from the factory to onsite staging to the office and then to the end user wherever they are. Then your end user spends even more time downloading apps and getting their PC up and running. And you manage all of this for the entire business.

Sound familiar? With Dell Technologies ProDeploy in the Unified Workspace, you get time back and end users get ready to work experiences. Here’s how:

- You just upload apps and device configurations to Dell
- We configure the machine, install the apps and deliver the device directly to your user. Virtually everywhere. Now your end users can be up and running in less time.
- And that’s it. Seamless, day-one productivity for end users, wherever and however they work.

Save up to nearly a week of admin time per 1,000 systems deployed, with just about an hour needed for new provisioning³

Protect your data with Endpoint Security in the Unified Workspace

**Trusted Devices**

Security begins with the endpoint and creates a foundation for protecting your environment. With Dell's commercial devices you get built-in security you can trust.

**Trusted Access**

Dell and VMware Workspace ONE provide our customers with an added layer of protection through Trusted Access. VMware Workspace ONE constantly monitors and validates the state of device, user, network and applications. At the first sign of a threat, it will ask for multi-factor authentication, and depending on the threat level it can even block user access and wipe data from a machine.

**Trusted Data**

Protect your business and help keep your competitive advantage yours with cutting edge threat protection. Our comprehensive threat management portfolio, along with Secureworks, combines prevention with detection and response.

Within Trusted Data, our SafeData and SafeGuard solutions provide you with the confidence that your workforce can work anywhere without the need to lock down data. SafeData gives end users the freedom to smartly collaborate while protecting data, even when it is stored in the cloud, giving you peace of mind. And with embedded and efficient compliance reporting, you can verify and prove data is always protected.

Through constantly monitoring and increased visibility, SafeGuard creates a secure foundation around the endpoint to protect your business ecosystem while enabling the end user to stay productive. Utilizing highly trained incident response specialists from Securework for expert support before, during and after a security incident.

Unified Endpoint Management (UEM) is becoming the new norm because of Windows 10 migration. Dell Technologies and VMware Workspace ONE provide you with a simplified path to modern management regardless of device, OS or applications, while giving users a faster, smarter experience.

Dell Client Command Suite and VMware Workspace ONE have integrated capabilities delivering a unified endpoint management experience to manage firmware, OS and apps from one platform. With VMware as part of the Dell Technologies family, you can now manage your Windows 10 devices and mobile devices from the same console, via the cloud. So instead of having one console managing your PCs, and another console managing your mobile device management system, you can manage all Windows 10 endpoints from one console through VMware Workspace ONE powered by AirWatch.

VMware Workspace ONE gives you the flexibility to either complement your existing PC management tools or to transform how you manage Windows 10 altogether. This is an intelligence-driven digital workspace that provides you a simple and secure way to manage any app on any smartphone, tablet or laptop. Integrated with Dell Client Command Suite, Workspace ONE provides access control, application management and multi-platform endpoint management for cloud and on-premise deployment.

Reduces your work time to deliver core applications to your employees from 2 hours to just 12 minutes⁴
