**DELL EMC POWERPROTECT DD SERIES APPLIANCES FOR IBM i**

**The ultimate protection storage appliance**

DD series enables organizations to protect, manage and recover data at scale across their diverse environments. DD series is the next generation of Dell EMC Data Domain appliances, that are now setting the bar for data management from edge to core to cloud. DD series provides the ecosystem support, efficiency, comprehensive, powerful data protection and cloud-enabled capabilities that customers have come to expect and appreciate from Data Domain and takes it to the next level.

The DD Operating System (DDOS) is the intelligence that powers DD series. It provides the agility, security and reliability that enables DD series to deliver high-speed, scalable and industry-leading multi-cloud protection storage for backup, archive and disaster recovery. DDOS integrates seamlessly with existing infrastructures, enabling ease-of-use with leading backup and archiving applications, and offers superior performance in conjunction with Dell EMC PowerProtect Data Manager and Data Protection Suite.

**DD series and IBM i**

Today, nearly all IBM i customers use a dedicated IBM tape library or IBM virtual tape library to protect their data. DD series and DDOS will emulate the IBM tape library and tape drives that IBM i systems need to protect their data. By leveraging virtual tape and deduplication, DD series will improve both backup and restore operations, enhance RTO/RPO’s and lower backup infrastructure costs. DD series supports the leading IBM i backup applications (BRMS, Robot/SAVE, LXI/MMX) and native CL commands.
