

Modernize Your Identity Management Platform

Services for Microsoft Active Directory

Essentials

Modernize your Active Directory environment with Dell Technologies Services. We can help you:

- Simplify operations and lower costs by consolidating Active Directory instances
- Deliver better employee experiences with self-service, single sign-on and authentication for both on-premises and cloud services
- Secure identity management services for contemporary workstyles

Ensure your organization is ready to support contemporary work styles with a modern identity platform

Organizations' data is spread across multiple applications, on-premises and in the cloud and accessed by multiple devices from internal and external users. Identity is the new control plane, which is why it's essential to modernize your existing environment to protect all users, ensure data privacy and help your business to grow and thrive through improved user experiences and productivity.

Too often, Active Directory does not get updated as frequently as it should. Priorities are elsewhere or people are reluctant to update for fear of introducing downtime. An older Active Directory system can make support difficult when an issue arises and can make compliance activities far more challenging.

The adoption of cloud services requires a secure and flexible Active Directory infrastructure. Older versions of Active Directory may work well for on-premises environments but are unlikely to be robust enough to support your cloud initiatives.

Modernize your Active Directory environment

Are you looking to adopt Azure Active Directory or a hybrid model with on-premises? Have you recently gone through a merger, acquisition or divestiture? Whatever compelling event is driving your need to modernize, Dell Technologies Services can help address the challenges of managing a complex consolidation or migration.

Partner with Dell Technologies Services for your Active Directory initiatives

Modern identity management is essential for organizations to thrive and foster productivity. Dell Technologies Services can help you transition to a contemporary Active Directory environment on-premises, in the cloud or a hybrid design for how your employees work. We offer services that span the entire spectrum of your Active Directory modernization journey to help you reduce risk with predictable outcomes.

Start with a clear vision. With our **Advisory Service for Active Directory**, we help you gain consensus on your identity management objectives. From there we align these objectives and requirements with our best practices to form the foundation of a customized, prioritized and actionable strategy with next steps.

Our **Planning Service for Active Directory** includes all the activities in the Advisory Service in addition to collaborative design workshops with your stakeholder groups to illustrate feature and function capabilities. Leveraging the information gathered and our expertise, we will create an Active Directory design and implementation plan.

Next we will build your modernized Active Directory environment with our **Implementation Service for Active Directory**. In addition to performing all the activities in the Advisory and Planning services, we will integrate, synchronize and customize on-premises and/or Azure Active Directory. A pilot will be conducted to prove out the design and collect feedback before rolling out to the rest of the organization in your production environment. In addition to conducting a knowledge transfer for your IT Team, we provide advice on best practices for communicating to your workforce.

For organizations looking for a partner to manage all aspects of their modernization journey including all migrations, our **Replatform Service for Active Directory** is the ideal choice. In addition to configuring any co-existence requirements, our proven factory-style migration of users, computers, devices and files helps to ensure your new platform is ready to support your business. We can even help you decommission your legacy Active Directory environment.

Choose the service that aligns to your Active Directory initiatives.

Services Activities	Advisory	Planning	Implementation	Replatform
Understand identity objectives	●	●	●	●
Map AD objectives and requirements	●	●	●	●
Provide implementation guidance, recommendations and best practices	●	●	●	●
